EARLY SONG BIRD

—Light Pink on White Spencer

EARLY MELODY

—Rose Pink on White Spencer

EARLY SPRING MAID

—Light Pink on Cream Spencer

EARLY SNOWFLAKE

—White Spencer

EARLY HEATHERBELL

—Mauve Lavender Spencer

Morse's Early Flowering Long Season Spencers are "fixed." They are remarkable for their floriferousness and length of blooming period. They produce handsome flowers with long stems and in every way are recommended for Florists.

These first class novelties should not only be grown by Florists, but will be valuable for all the Southern States, Hawaiian Islands and all countries with hot and tropical climates. The season of flowering is a long one and we have had them in flower from February to June and still flowering.

All Catalogue Houses should have these splendid new Sweet Peas.

Seed will be supplied by Seed Dealers, whom we are supplying direct.

(New crop Yarrowa is now being harvested and we expect to make early delivery to the Trade.)

Florists are requested to get further information concerning these grand novelties from the Trade.

C. C. MORSE & CO., Wholesale Seed Growers
SAN FRANCISCO, CAL.

GERANIUMS

We have a splendid stock of 2-in. and 3-in. Geraniums at \$2.00 per 100, \$18.50 per 1000 for 2-in.; and \$3.00 per 100, \$25.00 per 1000 for 3-in. We will send one thousand made up of an assortment of 50 each of 20 varieties, our selection, for \$18.50 per 1000 for 2-in., and \$25.00 per 1000 for 3-in.

HYDRANGEAS FOR SUMMER-BLOOMING

We have an unusually fine stock of hydrangeas,—fine symmetrical plants, well shaped and well budded. They are just beginning to bloom and will remain in bloom during July and August. These plants are in great demand at summer resorts for lawn and piazza decoration.

We have a fine lot of Otaksa, strong plants in 5 inch pots, one to two flowers each, at \$3.00 per dozen; also in 6 inch pots, three to four flowers each, with buds well advanced, showing color, at \$9.00 per dozen.

We offer, also, the following varieties in 14-inch tubs: Otaksa and the new French varieties,—Avalanche, Fraicheur, E. G. Hill, La Lorraine, Mme. Maurice Hamar, Mme. E. Mouillere, Mlle. Renard Gaillard, and Radiance. These are good sized plants in tubs, very well budded. \$3.00 and \$4.00 each.

We have, also, fine specimen plants of Otaksa in half-barrels—fine large specimens, well budded. \$10.00, \$12.50 and \$15.00 each.

BOXWOOD

Pyramids, 3 ft. high, \$2.50 each; 3½ ft. high, \$3.00 each; 4 ft. high, \$4.00 each.

FERNS

Nephrolepis elegantissima compacta, 2¼-inch pots, \$6.00 per 100; 3½-inch, \$3.00 per dozen; 6-inch, \$6.00 per dozen.

Nephrolepis elegantissima, 2¼-inch pots, \$6.00 per 100; 6-inch, \$6.00 per dozen; 8-inch, \$12.00 per dozen.

Nephrolepis Teddy, Jr., 2¼-inch pots, \$6.00 per 100; 3½-inch, \$2.00 per dozen, \$15.00 per 100; 6-inch, \$6.00 per dozen; 8-inch, \$12.00 per dozen.

Nephrolepis Smithii, 3½-inch pots, \$3.00 per dozen; 5-inch, \$6.00 per dozen.

Nephrolepis muscosa, 3½-inch pots, \$3.00 per dozen.

DRACAENA INDIVISA

Fine large plants for centers of large vases—8-inch pots, \$2.00, \$2.50 and \$3.00 each.

FICUS ELASTICA

Fine plants, 6-inch pots, \$6.00 and \$9.00 per dozen.

ENGLISH IVY

Strong plants, 4-inch pots, bushy, \$12.00 per 100.

Boddington's Gigantic Pansies

BODDINGTON'S "CHALLENGE."

This mixture contains all the finest Giant strains—of the leading Pansy Specialists in the world—the Giant self-colors, the Giant striped and margined, and the Giant blotched, etc., all carefully mixed in proportion. ½ trade pkt. 25c., trade pkt. 50c., ¼ oz. 75c., ¼ oz. \$1.50, ½ oz. \$2.75, oz. \$5.00.

SIM'S GOLD MEDAL MIXTURE.

Was awarded the First Prize and Gold Medal at the International Horticultural Exhibition, held at the Grand Central Palace, New York City, April, 1913. This splendid mixture is the result of years of painstaking selecting on the part of Mr. William Sim, Cliftondale, Mass. We are offering seed from the originator.

Trade pkt. 75c., 3 pkts. for \$2.00, ¼ oz. \$3.50.

BERMUDA BULBS

Delivery July—August

Bermuda climate is tropical and bulbs raised there are more likely to flower much earlier than the same varieties grown elsewhere. The following bulbs are from a very old and reliable source, and much better than the average bulbs imported from Bermuda.

LILIUM HARRISII. This was once the most favorite Easter Lily. It is grown extensively throughout the islands and with some growers is still a favorite.

Size	Case contents	Per 100	Per case	Per 1000
5 to 7 inches	400	\$5.00	\$16.00	\$38.00

FRENCH BULBS

Delivery August—September

Owing to the war in Europe deliveries of French bulbs may not be so easily made as usual, and early orders are advised. Freight rates are higher than in normal years, and war insurance, case charges, and other incidental costs connected with the importation of foreign merchandise are greater than ever. The bulbs offered as follows are of our own direct importation from the very best and most reliable source in France.

PAPER WHITE GRANDIFLORA. The most popular French bulb today. We are one of the largest importers of these bulbs in the world.

Size	Case contents	Per 500	Per 1,000	Per case	Per 10,000
12 cm. upward	1500	\$4.50	\$7.50	\$11.00	\$70.00

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—Pope.

Chrysanthemums

Plants in the late houses should be encouraged to make all the growth possible now. If any buds appear from now up to September they should be pinched off. If mildew is prevalent use sulphide of potassium—half ounce to a gallon of water and spray over and under the leaves. Plants that were benched during May will be benefited by some sort of nourishment now. This can be supplied in the form of bone meal and about half an inch of some well-rotted cow manure. This will help to keep the beds from drying out so often and keep the roots much cooler. It is necessary during this hot weather to give copious and frequent syringings to keep the temperature down as much as possible. Keep moist at the roots by watering when and where it may seem necessary. Keep green and black fly in check by light fumigation every 10 days, or oftener if necessary. Give plenty of ventilation.

Crotons

Crotons appreciate watering with liquid manure when well established in pots and in active growth, but heavy doses must be avoided. Damping down will now be necessary, morning, noon and night, and the plants should be examined each day and watered only if they need it, for even whilst growing they should not get in a saturated condition. Crotons should not be shaded too heavily or the naturally brilliant coloring of the leaves will become more somber. Frequent syringing benefits the plants and keep such insect pests as mealy bug, red spider and scale in check. Crotons, or codiaeums, as the botanists prefer to call them, succeed best in a warm, moist greenhouse. Propagation is easy. It can be done by syringing and mossing the tops, which if kept constantly moist will soon root.

Orchids

Cattleyas that are in active growth will require an abundance of water at the roots with a light syringing overhead two or three times a day. Damp the floors and benches well twice a day so as to create a humid atmosphere. All cattleyas that have completed their growth should be placed at the coolest end of the house or where they can be given a fair amount of air. The quantity of water should be lessened until only enough

is given to keep the plants from shriveling. Later you can give them more airy, cool, dry and sunny quarters, which will induce them to ripen up their growth. Very little water will be needed at the roots during this rest, but give a gentle syringing over the plants on bright days, which will help to keep the growths in good condition. All other orchids of the many species that will now be finishing up their growth should be removed to a cooler house that is very lightly shaded so as to prevent a second growth.

Raising Perennials

Plants from seeds sown now and transplanted when large enough into the border this fall and given some care as to watering will get well enough established to stand the winter. The seed should be sown in frames where it will be convenient to water them. Any good light soil that has been made fine will be suitable. Keep shaded and moist until they have started. When the seedlings are large enough to handle prick them out and keep shaded for a few days in order to give them a start. They can be transplanted again into cold frames where they can stay during winter and have slight protection in severe weather and from the bright sunshine.

Preparing Compost for Carnations

All good growers know that without a congenial compost from which to draw the necessary food supply, returns from the plants will be very unsatisfactory. In reality there is no dull season for the carnation grower, for there is always something to be looked after. Sod that was piled up last fall and mixed with manure at the rate of three of soil to one of manure will not require anything else outside of a good turning over. Always keep the field clear of weeds and it will be time well invested. Do not allow the compost to be overgrown with rank weeds which will soon draw much of the plant food that your carnations should enjoy.

Stock Plants

Take good care of all stock plants. Do not let them get overgrown with weeds, but go over them once every ten days with the cultivator and weed where necessary. See that there is a durable label to each variety if you want them true to name for propagation later on.

Next Week: Aerides; Bulb Compost; Chrysanthemums; Eucharis amaranica; Smilax; Time to Think of Christmas.

INDEX TO VOLUME XXIII

Those of our subscribers who bind their volumes of Horticulture, or who for any other reason may wish to have the index to the contents of Vol. XXIII—January 1 to June 30, 1916—will be supplied on application. THEY ARE NOW READY.

There has been much lamentation ever since the European war started, over our inability to get potash fertilizer as heretofore and the serious consequences to follow this potash famine. Commenting upon the various schemes that have been proposed for utilizing home sources of potash supply the New York Sun editorially remarks that "Our market, indeed, has greatly contracted; whereas our farmers once used nearly a million tons, now many except those engaged in citrus fruit growing are learning to do without it." This comes pretty near "hitting the nail on the head." The fact is that very few soils are hopelessly deficient in the necessary elements for plant growth. The trouble is

mainly that we do not till the soil and really stint ourselves in the proper use of it. After all, soil acts principally as a sponge or medium to store and give out moisture and plant food. The deeper the soil the greater its capacity for storage and the more it is worked the more gradual and continuous will the supply from which plant tissues are built, be given out to the crop. The great defect in agriculture and horticulture as practiced in this country is that we do not avail ourselves as we should of the whole volume of material at our command. It has been stated that if we were to visit the south of Italy in late July or early August when the grain crops have been harvested we should find the farmers there turning the soil each year to an ever-increasing depth. In this way they bring about a disintegration of the soil elements and make the latent material into available condition for use, depending on atmospheric action to bring the ground to a condition of fertility without the addition of any fertilizer, comparatively little of that being within their reach, yet any diminution of the annual crop would seriously affect the welfare of the people. Many of the light soils of the eastern states are particularly adapted to improvement by deeper cultivation. The deeper working of the ground makes possible the retention of more moisture and will help to carry crops through dry weather where, under lighter cultivation, they would suffer or perhaps perish. Rather than pay the present abnormal price of potash it would seem wise to invest a fraction of the cost of this material in deep and thorough cultivation and there need be no fear of the result. There are comparatively few field or garden crops that require a great amount of potash.

Advertising value

Our esteemed New York contemporary states as its opinion that "the value of an advertisement is gauged by the impression it makes upon the mind." The Western Union Telegraph Company in an announcement sent out this week says that "the strength of advertising lies in its *means of approach* and its ability to convince." "Means of approach" is certainly an improvement upon the previous definition of good advertising. Looking at it from HORTICULTURE's angle we would add one more desirable qualification, viz. *whom* it approaches and *whose* mind it impresses. HORTICULTURE has always taken pride in the quality and standing of the people who read it. Its reading matter has from the start been selected with "quality" as its first consideration in its contents and also as to the class of readers to whom it should appeal. Mere size of circulation, regardless of quality, we have never striven for. One letter received today says "Stop sending that papper. I get 4 pappers and I dont open any of them." Another letter just received says "Enclosed please find money order for One Dollar for subscription to HORTICULTURE. I would not be without it." Every trade paper has readers who believe in it but the supreme test of advertising value lies not so much in their number as in their character. It goes without saying that no good business man would go very far in search of customers such as the writer of the first quoted letter, while of such as the latter, one cannot have too many of them. So it is true that while the approach may be excellent and the "ability to convince," may be consummate, that is not yet sufficient for success for "the impression an advertisement makes upon the mind" must depend finally upon the quality of the minds it reaches.

The
 best fertilizer

Tying Young Beauties

It is best not to be in too much of a hurry to get the young Beauty plants tied up, for it will do them good to lie around a little, giving them a better chance to break from the bottom. This should not be carried too far, however, and as soon as the plants begin to be hard to syringe they should be tied up. It is best to tie to wires and not to stakes. This will give the grower a chance to tie the plants on a slant instead of straight up, which will induce them to break more freely from the bottom. We always use five wires to four rows of plants, which enables us to distribute the growth well along the wires, giving the plants plenty of room and making it much easier to syringe than it would be were all the growth crowded on four wires. Be careful not to tie the wood too tight, for it will double in thickness before the season is half over, and if the knots are tied too tight the string will cut in, thus shutting off a great deal of nourishment. When making braces on the ends of the benches, make sure that these are made well so that there will be very little give when the wires are stretched. These must be tight and it will take a good strong brace to hold fifteen wires, all pulling hard from the ends. The center braces will not have to be very strong, as they only hold the weight of the wire. They should never be made of heavy wood, as that would throw too much shade and be very clumsy to take down and handle when the houses have to be replanted. It will not be necessary to stretch all the wires at once, as only the bottom layer will be needed. Those should be put in and then stretched one after the other. It is best not to tie them securely at first as they may have to be taken up a little bit when the others are put on and never should the twists be sharp as the wire is wound around. By carefully tying the ends of the wires to the braces they can be untied next spring and used again next fall without any repair to the wire and this means a great saving in labor, especially on a large place.

Disbudding

Until the plants are big enough, it will be of advantage to the grower to see that the plants are kept disbudded, never allowing the buds to get to any size. It will not take very long to do this work and the time will be well paid for later on. The proper time to remove the buds is as soon as they show. Take them with at least one leaf and if the plant has plenty of foliage take them with two leaves right down to a good strong eye. This will insure a strong break which will grow for a while before it again carries a bud. Never take only the buds while disbudding, for the first eye below the bud is not strong enough to send forth a good break and if the bud is removed without taking the eye with it a weak growth will result which will no doubt bear a bud again before it gets three inches long. Growth like that is not good for the plants, making them hard to start going right. With Beauties there will be plants that will make too many breaks from the bottom. Keep only the strongest ones and those nearest the soil; the others should be rubbed off as soon as they appear.

Were all the breaks left on there would be too many for the roots to carry.

Picking Bottom Leaves on Beauties

As soon as the plants get on to the first wires it will be necessary to go over them and remove the most bottom leaves that are right against the soil. This is done to insure an air space between the bottom leaves and the soil, thus giving no chance for moisture to condense under the leaves and encourage an attack of spot. With the weather we have been getting, this part of the growing will require especial attention for if neglected spot will almost surely set in, and with things favorable will spread all over the plants, nearly ruining them besides making a great deal of extra work. Be careful to remove only the leaves that actually touch the earth and not take the leaves half way to the first wire. Were this done the plants would suffer and harm would result. Have something along, and as the leaves are picked take them up and carry them away to be disposed of outside. Burning them would be the best, and if it is not possible to do so at once, spread them out somewhere to dry quickly and then burn right away. While these leaves are being picked, see that there is no spot left behind. Be very careful on the back rows as these are more apt to start spot than where there is plenty of light.

Scratching Over the Benches

This will have to be done quite often for there will be plenty of weeds as a rule. Care should be taken not to break up the soil too fine for it will be necessary to have the surface rough to make it easier to water, the rough lumps of soil and sod making the water stay where it is put instead of running all over the bench as it will if the soil on the surface were smooth. As soon as the plants are established it will be necessary to scratch the benches over very lightly so as not to disturb the roots especially with the sort of weather we are getting most of the time.

The Late Wm. F. Kasting

EDITOR HORTICULTURE.

Dear Sir:—Being away from home when W. F. Kasting died, the news was delayed in reaching me. In his passing away an outstanding figure has gone from the S. A. F. It was my privilege to be intimately associated with him since 1901, when he was elected vice-president, and I have good reason to know and appreciate his untiring, unselfish work in behalf of organized horticulture. A born organizer he brought into the field a force which is uncommon in our ranks and which he used unstintingly for the general good. It is meet that we should all pay loving and appreciative tribute to his memory. His like does not pass this way often and he leaves a void which it will be difficult to fill.

His personality was a tonic for those who were fortunate to come in contact with him. Whole-souled and generous to a fault, large hearted and broad minded, far above pettiness, he was an inspiration to those who labored with him and a tower of strength in every crisis.

The pity is that he was not spared for many more years to us. Of him it may be said with truth, "When the gods love die young."

Very truly yours,

Patrick J. Mara

SWEET PEA SHOW AT SAN FRANCISCO

The second annual Sweet Pea Exhibition of the San Francisco Branch of the American Sweet Pea Society was held in the Concert Room of the Palace Hotel, on June 9th and 10th. The exhibition was larger than the previous year's, and the superior quality of the sweet peas throughout, was remarked on by all who had seen the previous exhibition. The gardeners and amateurs have come to realize that the cordon system is the best method of growing Spencer sweet peas for exhibition, and some of the vases shown showed wonderful culture and great intelligence on the part of the growers in the care of their plants.

The entries were much more numerous and the hall was filled to overflowing. The attendance was a little disappointing on the opening day, but on the second day the show was visited by crowds. It is too bad that the finances of the society would not permit of more extensive publicity, but when it is realized that the entire expenses of the San Francisco show falls on a few of the local growers and seedsmen it can be realized why more could not be done along these lines.

Sweet pea enthusiasm has struck the San Francisco neighborhood and it is hoped that the show can be made an annual affair. Unfortunately the detail work falls on the shoulders of a few who are the least able to give the time at this season of the year. It is hoped that some arrangement can be made in the future whereby the duties can be distributed so that there will be no danger of the Assistant Secretary giving up his position. The judges were Eric James, president of the Pacific Coast Horticultural Society, and John McLaren, supt. of Golden Gate Park. The decorative classes were judged by Mr. Sanborn, Jr., of Oakland, in conjunction with Miss Evelyn McLean, of San Francisco.

Prize Winners.

Vase of Fiery Cross, prizes donated by W. Atlee Burpee & Co. 1st, John W. Aitken, gard. to Chas. W. Haas, Menlo Park; 2nd, S. M. Spalding, gard. David W. Slade. Six vases Spencer, prize donated by W. Atlee Burpee & Co. 1st, John W. Aitken, with magnificent vases of Constance Hinton, Mrs. Hugh Dickson, Capt. Travers;

C. C. Morse & Co.'s Exhibit at San Francisco Exhibition American Sweet Pea Society.

2nd, Mrs. Louis Stern, Menlo Park, gard. David Bassett, with fine examples of Wedgwood, Doris Usher and Scarlet Emperor.

Twelve varieties Spencer, prizes presented by C. C. Morse & Co. 1st, John W. Aitken. This was one of the finest lots in the show, the outside vase being Royal Purple; 2nd, Frank C. Thompson, San Francisco; 3rd, Emile Ralston, San Jose.

Five vases Spencer, prize donated by the Hallowell Seed Co., Emile Ralston, San Jose.

Nine vases Spencer, prize donated by Waldo Rohnert. 1st, John W. Aitken. Mr. Aitken in this class showed some wonderfully fine colors, the vase of Barbara winning the prize for the best vase in the show. The quality of the blossoms in the first prize vase was quite remarkable and would have done credit to some of the oldest exhibitors in England; 2nd, Mrs. Louis Stern. The length of stem here was truly remarkable. The outstanding vase was "The Squire."

Three vases Spencer, prizes donated by Braslan Seed Growers Co., Inc. This proved to be the most popular class in the exhibition, there being no less than twenty entries. 1st, John W. Aitken; 2nd, Mrs. Louis Stern. The vase of Illuminator in this exhibit was superb and was awarded 2nd prize as the second best vase in the show.

Vase Elfrida Pearson, prize presented by L. D. Waller Seed Co., George Nunn, Menlo Park, gard. to Sigmund Stern.

Any Red Spencer, prizes presented by W. Atlee Burpee & Co. 1st, Mrs. Louis Stern, variety shown "The Squire"; 2nd, S. M. Spalding, Menlo Park, gard. David W. Slade.

Any Lavender Sweet Pea, prizes donated by W. Atlee Burpee & Co. 1st, S. M. Spalding, variety shown, "Asta Ohn"; 2nd, David Patterson, Menlo Park.

Vase of mixed Spencers, prizes donated by C. C. Morse & Co. 1st, Mrs. Geo. McLean, San Francisco; 2nd, Philip Werner, San Francisco.

Most tastefully arranged vase of Spencers, open to ladies only. Fourteen vases shown, Mrs. R. H. Grey, Piedmont, with a charming combination of New Miriam Beaver and Blue Picotee, with an odd spray of White Spencer.

Bride's bouquet and Ladies' corsage bouquet. 1st, Art Floral Co., San Francisco. White Spencer were used for the bride's bouquet and New Miriam Beaver for the corsage bouquet. The judges had no easy time in this class, as most creditable exhibits were made by the Francis Floral Co. and MacRorie & McLaren Co. The latter company also made a very attractive display of floral pieces designed in sweet peas.

The co-operation of the florists was much appreciated by the management of the show. The trade rallied to the support of the management and there were no fewer than four large representative collections and this added tremendously to the body of the exhibition.

C. C. Morse & Co. put up about 200 square feet, comprising leading Spencer varieties, with a large number of their choice seedlings from their noted workshop. Three large uprights comprised the main background of the exhibit, the varieties used being New Miriam Beaver, Scintillator and Henry Ohn. Scintillator is one of this firm's novelties for 1916-1917 and is a brilliant salmon orange, striped on cream ground and is particularly beautiful in the sunlight or under artificial light. Culebra, is a mauve, striped on white ground, but is a truly duplexed flower. Henry Ohn is a pink on cream, also duplexed, and is among the most promising novelties for future years. The new Sun-proof Scarlet will be welcomed by all growers.

W. Atlee Burpee & Co., Philadelphia, Pa., sent a splendid display from their Lompoc Seed Farm. The center was occupied with a cross, made up of the well-known variety Fiery Cross. The whole exhibit was very tastefully set up. Included were some of this firm's new Early Flowering Spencers, and the following were given awards of merit:—Fordhook Pink and White;

Exhibit of W. Atlee Burpee & Co. at San Francisco American Sweet Pea Society.

Fordhook Countess; Fordhook Hercules; Fordhook King. This exhibit was in charge of Harry F. Buckman, from the Floradale Seed Farm at Lompoc.

The L. D. Waller Seed Co., of Guadalupe, put up a delightfully fresh exhibit and one marveled at the condition of the flowers after their journey. The large exhibit of R. F. Felton, Edward Cowdy and Dobbie's Cream made a striking background. The quality of R. F. Felton was particularly good. This firm also showed a new cream, under the name of "New Buttercup." The depth of the color was quite remarkable.

Waldo Rohnert had a meritorious display of all the standard varieties of Spencers.

NATIONAL SWEET PEA SHOW.

Bar Harbor, Maine, July 15th-16th.

We wish to call the attention of those interested in this Show to the following schedule of transportation service:

E. S. S. Co., Boston-Bar Harbor. All Water.
Leave Boston 6.00 P. M. every day except Sunday.

Arrive Bar Harbor noon next day.
Leave Bar Harbor 1.30 P. M. every day except Sunday.

Arrive Boston 5.15 A. M.
E. S. S. Co., New York-Bar Harbor. All Water.

Steamships Massachusetts and Bunker Hill, leave New York daily at 6 P. M. Connection at Boston as above.

M. C. R. R. Co., Boston-Bar Harbor. All Rail.

Leave North Station, Boston, 10.00 A. M. and 10.00 P. M.

Arrive Bar Harbor 6.05 P. M. and 8.20 A. M.

Leave Bar Harbor 9.45 A. M., 4.15 P. M., or 9.00 P. M.

Arrive Boston 9.00 P. M., 4.45 A. M., or 7.30 A. M.

Maine Cent. R. R. Co., New York-Bar Harbor. All Rail.

Leave New York 7.15 P. M.

Arrive Bar Harbor 12.30 P. M. (Next day)

Leave Bar Harbor 3.00 P. M.

Arrive New York 7.56 A. M.

It is very essential that those intending to attend the Sweet Pea Exhibition should engage sleeping accommodations at once, otherwise discomfort may ensue, as travel "down east" is very heavy at this season.

HOUSTON CONVENTION OUT-LOOK.

We have received copies of letters from El Paso, Alvin, Dallas, Sherman

ing a large and enthusiastic attendance in Houston next August.

THE HOUSTON TRADE EXHIBIT.

Secretary Young is now prepared to receive space reservations for the convention exhibit in Houston. There is a great deal of enthusiasm among the southern florists, and you may take it from me that there has never been an occasion when so many southern florists have been assembled in one body. There is not a question of doubt that this is now an opportunity for dealers to display goods and get them before the florists in this section at a very economical cost.

At our last two Texas conventions, we had something like 125 florists from within the state. We are expecting at least 200 florists this summer from within the state and it is reasonably believed that we will have 300 or 400 florists scattered through the South at this convention, which will give us at least 500 southern florists. This alone is worth while making an exhibit at the Houston Convention. There is a great interest throughout the country to take advantage of this trip to see the Southland, and I am convinced that we may expect several hundred florists from other sections of the United States. We have set our mark for 1,000 florists in attendance at the Houston Convention. Up to date, there has never been a convention when there has been given so much wide publicity as the Houston Convention. We are just beginning on this publicity work, and you may rest assured that we are not going to miss our mark very far.

Don't miss this opportunity. Send your reservation to Mr. John Young immediately and get the best space. As the indications are, we will have our hall crowded to the limit with trade exhibits. Attend to it now.

TARRYTOWN JUNE EXHIBITION.

The annual June exhibition of the Tarrytown (N. Y.) Horticultural Society of roses, sweet peas, strawberries, hardy flowers, etc., was held in the Y. M. C. A. building on Tuesday afternoon and evening, June 20. On account of the lateness of the season and the inclement weather, the exhibition was not up to the usual standard, but, taking everything into consideration, was equally as good as previous seasons.

The exhibits of hybrid tea and hybrid perpetual roses was excellent, and of strawberries was exceedingly fine. Owing to a continual downpour of rain the week previous, sweet peas were not exhibited as in previous years. The exhibits of the school gardens were particularly interesting and encouraging.

Chas. H. Tibbits' "excellence prize" was awarded to the F. R. Pierson Company for the best exhibit of the show. This consisted of the roses Ophelia, American Beauty, Francis Scott Key, Richmond, Hoosier Beauty, and Sweetheart or Mignon, beautifully arranged in baskets and flower bowls, which are now so popular; also other flowers, like gaillardias, coreopsis, and cornflowers. The judges of the exhibits were George Middleton, gardener for William Rockefeller, Tarrytown, Arthur Griffin, superintendent for Samuel Untermeyer, Yonkers, and

S. S. MASSACHUSETTS

On the "All Water Route" Between New York and Boston via Cape Cod Canal.

Henry Kastberg, superintendent for the Misses Masters, Dobbs Ferry.

The awards were as follows:—

1st. Hardy perennial flowers, Mrs. Carl Victor, gard. Thomas Lee; 2nd. Mrs. H. Darlington, gard. P. W. Papp; 3rd. Mrs. S. Hermann, gard. Abel Weeks.

3 qts. strawberries, 1st. Emil Berolzheimer, gard. Wm. Jamieson; 2nd. Dr. C. C. Brace, gard. Geo. McIntosh.

2 qts. do., Mrs. J. B. Trevor, gard. Howard Nichols.

1 qt. do., 1st. Dr. C. C. Brace; 2nd. Emil Berolzheimer.

1 qt. do., amateur, Miss Emily Millard.

12 H. P. roses, 1st. Mr. F. S. Wheeler, gard. John Orr; 2nd. Mrs. J. B. Trevor.

Col. outdoor roses, 1st. Gen. E. A. McAlpin, gard. John Woodcock; 2nd. Mrs. H. Darlington.

12 do., 1st. Gen. E. A. McAlpin; 2nd. John D. Rockefeller, gard. Wm. Woodger; another 2nd, Henry Sidenberg, gard. James Currie.

6 H. P., 1st. Mrs. John F. Dinkel; 2nd. James T. Lawrie.

3 H. T., 1st. John D. Rockefeller; 2nd. Mrs. S. Hermann.

6 var. outdoor roses, Gen. E. A. McAlpin.

3 var. do., John D. Rockefeller.

12 blooms, 1 var., Dr. C. C. Brace.

Vase roses, Mrs. H. Darlington.

Display climbers, Mrs. S. Hermann.

12 Druschki, 1st. Mrs. H. Darlington; 2nd. Gen. E. A. McAlpin; 3rd. Mrs. Carl Victor.

3 var. peonies, 1st. A. L. Gifford; 2nd. Mrs. H. Darlington.

Col. Dianthus, Mrs. E. Schwartz, gard. Henry Fuchs.

12 var. vegetables, Mrs. J. B. Trevor.

6 do., 1st. Dr. C. C. Brace; 2nd. Mrs. Carl Victor.

Digitalis, Mrs. H. Darlington.

Specimen palm, F. R. Pierson Company.

Outdoor blue flowers, 1st. Col. Jacob Ruppert, gard. Frank Heid; 2nd. Dr. C. C. Brace; 3rd. Henry Sidenberg.

Digitalis, Miss L. K. Curtiss; Mrs. H. Darlington, A. P. Husted prize for vase of digitalis.

Salvia globosa, Col. Jacob Ruppert, honorable mention.

ROSE AND STRAWBERRY SHOW.

The annual rose and strawberry exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, Saturday and Sunday, July 1 and 2. Roses and strawberries will then be in their prime and the show will be one of the most interesting of the year's schedule. In addition many other seasonable plants, flowers and fruits will be on exhibition as well as collections of vegetables.

The show is free and will be open Saturday from 12 to 6, and Sunday from 1 to 6 o'clock.

WM. P. RICH, Sec'y.

CLUB AND SOCIETY NOTES.

The Paterson, N. J., Floricultural Society held a flower show on June 17, which was attended by several thousand visitors.

The Century Club of Scranton, Pa., held a summer show on Tuesday, June 20. It was a great success and the ladies who conducted are deserving of much credit. There were many visitors.

On June 23 the Rhode Island Horticultural Society held its annual June exhibition in the ball room of the Narragansett Hotel. The park department and R. I. Hospital were represented by large displays. The majority of the other exhibitors were amateurs. Robert Johnston, Joshua Vose and C. Hartstra served as judges.

The annual free Peony Show of the New Bedford, Mass., Horticultural Society was held on June 22, in the public library. D. F. Roy, supt. of the H. E. Converse estate at Marion and T. C. Thurlow's Sons of West Newbury were the leading exhibitors,

The danger sign —

To ignore it means sure tree destruction!

If you were to examine closely the trees on your place, you would probably see on some of them a tiny crevice in the bark. To you perhaps it would look very innocent. To the trained eye of a Davey Tree Surgeon it would mean danger!

The tree in the picture was sound and healthy—apparently—except for a little hole in the bark (photograph No. 1). But note what the Davey expert discovered after a little chiseling (photograph No. 2)—a condition of hidden decay so serious that the tree was but a mere shell, an easy victim for any severe storm! What is the real condition of YOUR trees? Have them examined NOW—by

Davey Tree Surgeons

Tree Surgery as they practice it is scientifically accurate and mechanically perfect. It is SAFE because it eliminates experiment. It endures. W. G. Carrington, Greenwich, Conn., writes: "The work you have done for me is the most wonderful example of tree surgery I have ever seen." Davey experts are the official choice of the U. S. Government. Every year of neglect adds 10 per cent. to 25 per cent. to the cost of saving trees. Write today for free examination and booklet illustrating Davey Tree Surgery.

COMING EXHIBITIONS.

July 1-2, Boston, Mass.—Rose and Strawberry Exhibition, Massachusetts Horticultural Society, Horticultural Hall.

July 14-15, Bar Harbor, Me.—Annual Show of American Sweet Pea Society.

July 20, Worcester, Mass.—Sweet Pea Exhibition, Worcester Horticultural Society.

August 24-25, Lewiston (Me.) Annual Flower Show, Gardeners' Union, Lewiston City Hall.

July 26-27, Southampton, N. Y.—Tenth Annual Flower Show, Southampton Horticultural Society.

August 3, Oyster Bay, L. I., N. Y.—Dahlia Show, Oyster Bay Horticultural Society.

August 11-12-13, Boston.—American Gladiolus Society, Horticultural Hall.

August 24, Worcester, Mass.—Gladiolus Exhibition.

Sept. 2-9, Cleveland, Ohio.—Industrial Exhibition and Fair.

Syracuse, N. Y., Sept. 11-16.—New York State Fair.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

each making large displays. Mr. Roy was the recipient of a first class certificate for a beautiful exhibit of sweet williams. The rose show will be held on July 6 and 7.

Dr. Abel J. Grout of New Dorp, N. Y., who is an authority on North American mosses, has invited the American Fern Society to meet at his summer camp, "Moss Rock" cabin in Newfane, Vt., his native town, for several days, beginning July 17. The spot is famed as a mecca for botanists and the meeting will call together many of the scientific men of the Eastern states. Dr. Grout will extend the fishing privileges of a private pond and will transport all comers from the railroad to his camp in the heart of the southern Vermont wilderness.

A meeting of the New Jersey Flori-

cultural Society was held in Orange, N. J., June 19th. An exhibition of roses took place and some fine blooms were displayed. Wm. Reid, gardener to Sidney and A. M. Colgate, won first for vase of 18 white any variety and for best collection. Mr. Berglund, gardener for C. C. Goodrich, received the second prize in both classes. Mr. Schneider, gardener to Peter Hauck, Jr., received a special prize for collection of vegetables, also the following points in monthly competition: Cornflower, 85 points; sweet peas 60, carnations 75.

GEO. W. STRANGE, Sec'y.

The June show of the Medford (Mass) Horticultural Society was held on June 23. The rainy season had a marked effect on the exhibits, they being not up to their usual standard. Of roses there were very few exhibits and the quality was poor. Peonies were in fairly good form, being quite equal to those shown in Boston the previous week. Very good iris was staged by Mrs. Roberts, Wm. Macy and G. B. Gill. Miss Mackay had it all her own way with roses. Peonies were staged by Hon. Wilton B. Fay and Mrs. Puffer. Centaurea and larkspur by Mrs. Highly. Geo. A. Gill, sweetwilliams. The centre pieces for a luncheon table were excellent; Mrs. Highly winning with a finely arranged bowl of iris. The stage was filled with palms, ferns and peonies from the Lawrence estate. Jas. Methven of Hyde Park and Robt. Lawrie of Dedham were the judges.

AMERICAN ASSOCIATION OF NURSERYMEN.

Report of Secretary John Hall at the Annual Convention in Milwaukee, June 28-30, 1916.

Members of American Association of Nurserymen:

A pleasing duty placed upon your secretary by a resolution adopted at the Detroit convention, was to express the good wishes of the meeting to the "grand old men" of the association who were unable to be present at that gathering. This communication was written to J. Van Lindley, E. W. Kirkpatrick, C. L. Watrous (since deceased), A. N. Willis and C. S. Harrison. Several acknowledgments were received.

In anticipation of queries as to the effect of the new schedule of membership fees under the revised constitution upon the registration, your secretary feels that he cannot answer such in any different language than has already been employed by him in correspondence with the Executive Committee and in the columns of the trade publications. Predictions were made by some that Article I of the new Constitution, creating "active" and "associate" members, and introducing the plan calling for "additional dues" based on amount of business done, would work disastrously to the association. The results to date do not show such to have been the case. They have rather justified the wisdom of the adoption of the new rule, for, without any canvass for new members, the Badge book contains 364 names and eight others have registered since that publication was mailed. The cash receipts for the year have been \$5,829.85, against \$3,151.90 in 1915. For several years past effort has been made by specially-appointed committees to obtain new members, with some success, but in not a few instances this was largely intended as a compliment to the individual soliciting the membership, and therefore such have not remained permanent. Your Executive committee has passed favorably upon 21 of the 24 new applications for memberships, but after careful investigation have been compelled to decline the other three. To hold membership in this association from this time on will mean very much more to the individual nurseryman who enjoys the privilege, than the mere perfunctory act of registration. For the last six years the average registration has been 378. It ought to be twice that number.

To assist diffident members to become more easily acquainted with their brethren, it was decided to try the use of a bar containing a card upon which members are asked to write their name in a good bold hand.

The Tireless Reaper—Death—has again attacked our numbers and removed several members during the year. Captain Charles L. Watrous of Des Moines, Iowa, fell to sleep in March of the present year. Mr. Watrous was one of the "old guard" of

REX BEGONIAS

BEDDING STOCK OF ALL KINDS

A. M. DAVENPORT - Watertown, Mass.

this organization. F. W. Power of the Oregon Nursery Co., Orenco, Oregon, died early in this summer, after a siege of ill health—the immediate cause of death being blood poisoning, which developed from an accident. W. Atlee Burpee, of Philadelphia, Pa., died November 25, 1915, aged 57. He was a former member. We also mention because of his prominent connection with the Division of Pomology in the U. S. Department of Agriculture, the removal of G. B. Brackett, in December of last year; also Major Frank Holsinger, Rosedale, Kansas, in January this year. He was not a member, but Holsinger Bros. have recently allied themselves with the Association.

There may be others of whose death we have not been advised. Members who know of such are asked to mail particulars to the Secretary, that the names may be included with others in the "In Memoriam" contained in the Annual Proceedings.

The financial statement of the year is as follows:

RECEIPTS.

June 21, 1915—Balance and New Memberships	\$ 93.50
June 20, 1916—From Membership and Badge Book ..	5,720.75

Sale of Trade Term Labels	15.60
	\$5,829.85

DISBURSEMENTS.

Paid Peter Youngers	\$5,572.10
Balance on hand	257.75
	\$5,829.85

In conclusion, gentlemen, let me assert that there can be no doubt as to the future of this Association. Having broken the spell of traditional routine, which has had so tight a grip upon the organization, the new constitution beckons members to a higher plane of thought and of action, and it is no fanciful theory that we pronounce when we say that the American Association of Nurserymen is to become the synonym of all that is best in administration and in future development along lines that shall bring the orders of the consumers of your products to your desks in larger numbers. This, as a result of the more extended publicity that shall be given concerning the value of those products from both the aesthetic and the practical points of view, and because, also, of the more dignified position your honorable occupation shall come to occupy in the estimation of your patrons.

Co-operation, liberally and cheerfully given by each member to your executive officers, will make possible all that we have herein presumed to predict.

Officers—President, Kirby B. White, Detroit Mich.; First Vice-President, F. W. Bolgiano, Washington, D. C.; Second Vice-President, L. L. Olds, Madison, Wis.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.

AMERICAN SEED TRADE CONVENTION.

The Thirty-fourth Annual Convention of the American Seed Trade Association closed its sessions on Thursday, the 22nd, after electing officers for the ensuing year. The attendance at this convention was by far the largest in the history of the Association and must have been very gratifying to the officers.

It is not the purpose of this article to give any detailed report of the proceedings. Such details will no doubt be given in the annual report of the secretary, although we are advised that the discussions, particularly that relating to the Disclaimer, were so prolific, that it was decided to omit most of it, not only because of the great length of the same, but because it was not thought advisable to spread on the records of the Association all that was said on each side of this subject.

The Disclaimer.

While speaking of the Disclaimer it may be well to say that it easily occupied the center of the stage, but we are informed that although the discussions were warm and earnest, they were conducted in excellent temper, and the erring brethren were not specifically censured, and all promised to support the Disclaimer in future, the old form of which was re-affirmed by an overwhelming vote. It is perhaps well to pass over this rather unpleasant incident of the past year, trusting that those who thought their interests required them to ignore the Disclaimer have been convinced that their interests are best served in its observance.

We have indicated on more than one occasion that in our judgment a modification of the phraseology of the Disclaimer might be effected which, while softening its rather frank and abrupt phraseology, would not materially impair either its moral or legal value. We are informed that this entered largely into the discussion but for fear of impairing its usefulness the Association thought best to re-affirm it in its old form. We believe, however, that now the matter has been opened for discussion the agitation for a modified form of Disclaimer will continue until this has been effected.

An Honor Bestowed.

A number of interesting and instructive papers were read on various subjects which we will not attempt to

mention in detail, but we do wish to particularly mention the report of the Association's counsel, Curtis Nye Smith, which was an especially able document and evidently greatly impressed the Association. Mr. Smith, by the way, was elected an honorary member of the Association, it being the consensus of opinion that he could serve the Association better as a member than simply as its counsel without membership.

Hospitalities.

Among the features to which attention may be called was the very able address of the president, which was the subject of consideration by a special committee, also a reception given by the President and Mrs. Lupton and their daughter. This was a very pleasant social feature of the convention. Attention may also be called to the banquet which was very handsomely arranged and although it was strictly a dry one officially, there were little oases in the desert which relieved the sombreness usually incident to cold water banquets. It may also be remarked that these oases could readily be located by the volume of noise emanating from those particular localities.

The Chicago seedsmen gave the ladies an automobile ride through the parks and North Shore Drive, Wednesday afternoon, June 21, stopping in Highland Park, where tea was served.

Crop Reports.

Very interesting crop reports were read but owing to the extreme lateness of the season both East and West, crops had not sufficiently developed to form any sort of judgment as to ultimate results. It is certain, however, that beans are going into the ground exceptionally late in Michigan and New York State, and the same may be said of sugar corn. Reports on corn and vine seeds from the West indicated a better general condition than in the East. We have learned from reliable sources that in certain sections of New York State where beans and sugar corn are grown very largely for seed purposes, only a small percentage of these crops have thus far been planted and the prospects of maturing such crops are daily growing dimmer. Only an exceptionally warm and late autumn will make this possible. The pea crop in Michigan and Wisconsin as also New York State, both for canning and seed purposes, is in very unsatisfactory condition, the odds being now that not over 50 per cent. of a yield will be secured either by the canners of the seed growers. This is a situation that must be very gratifying to those seedsmen who have carried over considerable stocks of seed peas, as well as to the canners who refused to sell their product at much below cost, taking their chances of carrying it into another year instead. Both sides are likely to reap a liberal reward for their firmness and confidence in the future.

Officers Elected.

Officers for the ensuing year were elected on Thursday, as follows: Kirby B. White, Detroit, Mich., president; F. W. Bolgiano, Washington, D. C., first vice-president; L. L. Olds, Madison, Wis., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer.

Executive Committee—J. M. Lupton, Mattituck, N. Y.; J. L. Hunt, Cambridge, N. Y.; H. M. Earl, Philadelphia, Pa.; L. H. Vaughan, Chicago; W. G. Scarlett, Baltimore, Md.

Membership Committee—J. C. Robinson, Waterloo, Neb.; Ben P. Corneli, St. Louis, Mo.; H. G. Hastings, Atlanta, Ga.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending June 16th, were recorded as follows:

Bulbs—Netherlands, \$36; Bermuda, \$1.

Plants—Belgium, \$7,117; Italy, \$9; England, \$709; Bermuda, \$49; Costa Rica, \$34; Brazil, \$184; Trinidad, \$4; Colombia, \$2,592.

Red clover seed—France, \$11,546.
Clover seed—France, \$14,636; New Zealand, \$4,022.

Grass seed—Scotland, \$105.
Other seeds—France, \$28; Italy, \$48; Malta, \$1,129; Netherlands, \$318; England, \$24,194; Mexico, \$59; Argentine, \$976; Hongkong, \$257; Japan, \$35; Dutch Guiana, \$10.

Carbonate of potash—Mexico, \$1,829; Peru, \$50.

Nitrate of soda—Chile, \$60.

Other fertilizers—England, \$64,278.

Notes.

W. C. Grote, of Council Bluffs, Ia., has been elected president of the Iowa Seed Dealers' Association, at the ninth annual meeting held in Des Moines, June 8th. Other officers are E. M. Cole, Pella, vice-president, A. M. Eldridge, secretary, and John T. Hamilton, treasurer.

Last week a New York consignee was obliged to plant in Neptune's pond 150 cases of unsalable nursery stock. No doubt the finney tribe will appreciate swimming amongst the foliage, but it is hard on the Dutch consignors. This might be an object lesson to them in the future that this country is no dumping ground for the whole of Holland.

The Wholesale Grass Seed Dealers' Association elected the following officers for the ensuing year at the annual meeting held in Chicago, June 19th: President, A. E. Reynolds, Crawfordville, Ind.; vice-president, C. C. Massie, Indianapolis, Ind.; secretary-treasurer, Wm. R. Jossman; committee on arbitration, John A. Smith, Geo. S. Green and E. T. Stanford; counsel, Curtis Nye Smith, Boston.

Worcester, Mass.—The annual inspection trip in the Worcester parks took place on Thursday, June 29. A goodly number of park officials from other cities were present on invitation of the Board of Park Commissioners and H. J. Neale, city forester. Arthur V. Parker is superintendent of the parks of Worcester.

NEWS ITEMS FROM EVERYWHERE

BOSTON.

The flower markets have agreed to close at noon on Saturdays during the months of July and August.

Richard R. Haley, a well known florist of Everett, and Miss Anna T. Tehan were married on June 23.

Miss Genevieve Frances, daughter of Mr. and Mrs. F. Schuyler Mathews, was married to Francis Alley Hubbard at Cambridge, Mass., on June 26.

Dudley M. Pray of the Eastern Chemical Co., Jamaica Plain, tells us that the company suffered considerable damage by fire and water on Saturday, June 10, the roof being entirely burnt off the company's building. That the company is a live wire, however, is shown by the fact that they are still doing business at the old stand.

Covering one end of the smaller exhibition room of Horticultural Hall, the painting recently designed and painted by pupils of the Boston Museum of Fine Arts, is now in place. The design of the decoration is a formal garden crowned by the seal of Massachusetts Horticultural Society and surrounded by festoons of flowers. It is 28 by 14 feet and is directly opposite the entrance to the small hall.

The annual picnic of the Gardeners' and Florists' Club has been arranged for Thursday, July 27th, and the Committee on Sports is asking for contributions for prizes. During past years the appeal of the committee has been most liberally responded to, and there seems little doubt that the small amount now needed will be quickly subscribed. The committee requests that the contributions be for small sums. It is the purpose of the committee to make this a banner year and

keep up the record for a good day's fun to be enjoyed by all the members and families.

CHICAGO.

A. Henderson considers the season just closed as a fair one for the seed business. They have already received a shipment of Purity freesias.

It is the plan of Paul Klingsporn to have all the employees of the Chicago Flower Growers' Association take vacations in turn, Michael Fink leading off next Saturday.

Mrs. Phil Schupp and daughter left this week for their cottage at William's Bay, Wis., where they will spend the summer. Mrs. T. A. Budlong has been there for some time.

The bedding season is about over. The cold spring made it late in opening, but for the same reason it has been unusually long. The parks are beautiful, the soft green of the foliage retaining the freshness of early spring.

P. J. Foley modestly asserts that his fish story may not be given the credence it deserves but stoutly affirms that it is true. While enjoying some fishing in the lakes of northern Minnesota he lassoed a black bear—swimming in the water, but bruin was so eager to share the seat in the boat that they were obliged to set him free. Since his return they have shipped material for two large greenhouses to Cleveland, Ohio.

WASHINGTON, D. C.

The Senate has called upon the Federal Trade Commission to make an investigation to ascertain the cause of the increase in the price of anthracite coal.

William M. Hetherington, Philadelphia, is spending a month with his brother, J. Harper Hetherington, manager of the Washington Floral Company's store.

Hanover, Mass.—Miss Lottie Peterson, who has been at the Hanover Greenhouse for some time, has taken a position in the store of the firm in Rockland.

NEW YORK.

The Greek-American Florists' Association will hold its annual picnic at Witzel's Point Grove on Thursday, July 6.

Walter R. Siebrecht, who has been on the sick list for several weeks is better and has gone to Lake George to recuperate.

The N. Y. and N. J. Plant Growers' Association started with a full delegation for their 3 days' outing on Tuesday, June 27.

Wm. Nilsson, Woodlawn, is confined to his bed with a very bad case of inflammatory rheumatism which has been coming on for a considerable time. Mr. Nilsson's property on which are his greenhouses and nursery has been condemned for the extension of Bronx Park and he will soon be obliged to vacate.

Quite a number of young men connected with the floral trade of New York have joined their regiments and departed for the Mexican border. Among them are John Knickman from Bobbink & Atkins, Julius Mason from the Kervan Co., who is in Co. G, 71st Reg., Wm. McGann, 14th Reg. from J. J. Coan's, Arthur Clarke, corporal in 7th, of David Clarke's Sons, Jos. Leikens, retail florist, captain in 7th Reg., Stephen Masur's chauffeur, Charles H. Brown's son, an employee of Woodrow & Marketos, Robert M. Burnett, 4th N. J. Reg., second son of George Burnett, seedsman, David Thom, also an employee of Burnett Bros.

Springfield, Mass.—A thief attempted to make off with the contents of the money drawer at Mark Aitken's store last Thursday afternoon, but he was overcome after a hard battle and taken to the police station. His name is Wm. Clancy.

PROFITS PROFITS PROFITS

There's Money in Summer Business for the Florist Who Knows How to Please

We can supply you with strictly up-to-date accessories, which you **must** have if you want to give satisfaction. Stock up now and have the goods to show customers. Send for prices and you will be astonished to see how much you can do with a little money when you go straight to headquarters—**THE FLORISTS' SUPPLY HOUSE OF AMERICA.**

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

PITTSBURGH.

Accompanied by his family, O. J. Parker has gone to Prout's Neck, Maine, for the summer.

The sunken gardens are now under construction for the new summer home of Charles M. Schwab at Loretto.

The branch shop of the Zieger Company on North Highland avenue will be merged with the main house on Baum street the first of July.

Edward E. Ludwig has returned home from Cornell, where he was a member of this year's graduating class in the horticultural department.

Frank Smoller, an employee of Walter A. Faulk left on Saturday night for Mount Gretna, accompanying the National Guard en route for the Mexican frontier.

David Fraser, the superintendent of Henry Clay Frick's Pittsburgh estate, and of Fifth avenue, has placed John Martin on the New York grounds as resident gardener.

On last Wednesday a large outing was held on the Castle Shannon farm of Henry Meuschke, treasurer of the Ludwig Floral Company, for the German-Austrian-Hungarian benefit fund.

The funeral services of Miss Nora Noonan were held on last Monday morning in St. Mary's church, Bloomfield. Miss Noonan was for sixteen years head bookkeeper for the A. W. Smith Co.

Mrs. M. O. Roberts has been appointed chairman of the flower committee under the Bureau of Recreation for the summer. Flower Days in Pittsburgh's playgrounds this summer will be on Fridays during July and August.

Of surpassing beauty were the decorations for the garden party given for a debutante of the past season at the Allegheny Country Club on Sewickley Heights, where the decorations were carried out with Dorothy Perkins ramblers, etc., and fully a hundred Japanese lanterns.

The second annual rose day of the Congress of Women's Clubs of Western Pennsylvania was observed this

month with Mrs. A. D. Price as general chairman for the distribution. Roses by the thousands, as well as other flowers, were taken by the members to the hospitals of the city and distributed to the public ward patients.

Director Robert Swan, of the Department of Public Works, and Superintendent George W. Burke, of the Bureau of Parks, have started a campaign to beautify the city's streets through the construction of flower boxes in windows. They hope that the movement will be joined in by all citizens, particularly in the down-town sections. The Department of Public Works will gladly furnish suggestions as to what plants and flowers should be used.

PHILADELPHIA.

Still they come. Another florist for Ranstead street. Eugene Bernheimer is the latest. He moves from 11 South 16th to 1531 Ranstead July 1st. The great Kelly street with its bronze tablet is not "the only pebble on the beach."

John Walker, of Youngstown, Ohio, and the Isle of Pines, arrived in town last week, and his merry laugh was heard all over town from League Island to Frankford. So of course the sun was shining—and Jupiter Pluvius chased himself out of sight.

Allen Culberson, leader of the auto forces of the Pennock-Meehan Co., left on the 22nd inst. for Mount Gretna where the National Guard of Pennsylvania assemble on their way to defend their country's honor in the threatened trouble with Mexico.

James J. Karins, of the Dreer forces, who went under an operation for appendicitis at the German Hospital on the 22nd, was reported on the 28th to be progressing favorably. The operation was performed by the famous Dr. Deaver, who has achieved wide distinction on surgical cases of this kind.

Abram L. Pennock had a pleasant surprise this week. The old veteran had a call from three other old veterans. Adam Graham of Cleveland,

John Westcott and Robert Craig of Philadelphia, at his old homestead at Lansdowne, Delaware Co., Pa. His son, Samuel S. Pennock, drove the party out in his auto and did the honors of the occasion.

ST. LOUIS.

The St. Louis Florist Club's picnic will take place July 20th at Romona Park. This is a much looked for day among the florists each year.

The St. Louis Retail Florists' Association held a pleasant meeting June 19th at the Mission Inn Garden and talked over the season's business.

Walter Young of C. Young & Sons Co., left for the front with Battery A last week. Martin Lechner of Lechner Bros. also joined forces with the boys ready to fight the Mexicans at a moment's notice.

A new wholesale house was incorporated last week to be known as The St. Louis Wholesale Cut Flower Co. with a capital stock of \$20,000 all paid up. The incorporators are David S. Geddis, J. J. Beneke and F. P. Maid. Messrs. Geddis and Beneke are well-known in trade circles. The new company will open for business September first.

Obituary

William Bell.

Wm. Bell, a florist for many years in Spuyten Duyvil, N. Y., died on June 23 at his home on University Ave., Bronx, New York, aged 89 years.

George Shoemaker

George Shoemaker, orchid grower for S. C. Briggs, passed away at the George Washington University after having been confined to that institution for less than a week. Death was caused by stomach trouble which necessitated an operation from which he failed to recover. He was twenty-nine years of age and had been in the employ of Mr. Briggs for ten years. His widow and two children survive him.

Flower Market Reports

BOSTON This market is just now making a quick change overturn from bustling activity to summer listlessness. All the events that go to make June a good time for the florist are finished for this year; graduates have gathered in their diplomas and departed to get a rest-up before beginning life under new conditions; brides have disappeared to secluded retreats with their captures and nobody cares for the time being whether the florist prospers or not—or even exists, except where the unwelcome visitor with the sythe breaks in and then there comes a ripple on the becalmed surface. If a call should come for such use, there are plenty of serviceable flowers but should the demand include lily of the valley then the price must be paid—about double that of recent years. Lilies are plentiful but white roses are not. Carnations are very much overstocked, with quality ranging all the way from exceptionally fine blooms down to the worst imaginable rubbish, and values run lower than ever before at anytime of the year. American Beauty and Ophelia roses are among the best sellers and we might also include Hadley. There are still some peonies but no place for them now that the jollifications are all over. It is a good time for the florist to take a vacation.

CHICAGO No one complains yet of the extreme falling off of business that is always a part of the "good old summer time." True, the amount of money taken in is not equal to that of the winter time, but no one expects it and for the last week in June conditions are very satisfactory. Peonies are all cut, which is something to be thankful for and the cold storage plants do not contain so many as in previous years, which is regretted by no one. The counters are holding a great many wide open blooms and many growers are going to find their profits decreased by this condition which has prevailed all through the peony season. Carnation sales do not use all the good stock now coming in and there are many of the poorer grades to add to them. The latter part of the week moves off more flowers than all the rest in local sales and shipping orders are fairly numerous this week. Sweet peas are now plentiful but a very large proportion are of low grade. There are plenty of roses of all kinds. Larkspurs are especially prominent this week in the list of out-door flowers.

The receipts of stock are more than sufficient and prices are low. Shipping business holds up pretty well. Roses are in a heavy supply. Carnation receipts are letting down rapidly from day to day. Gladioli find a ready sale. The cut of lilies is adequate. Orchids and lily of the valley are having a heavy call but this will be over after this week. Other offerings include water lilies, larkspur, rambler roses and coreopsis.

Summer Roses

Both Russell and Jonkheer Mock are holding up well. They are two of our best hot weather roses.

\$5.00 to \$10.00 per 100, with some extra long Russell at \$12 and \$15 per 100.

CLOSED ALL DAY JULY 4TH.

This market is well
NEW YORK supplied with pre-
miscuous flower stock.
The windows all through the whole-
sale district are aglow with campanu-
las, coreopsis, sweet williams, sweet
peas, gaillardias, centaureas, daises,
larkspurs, peonies and other glowing
products of the outdoor plantation. Of
roses not many are in sight but
there are plenty laid away in the
ice boxes and they may be had
at low figures unless they are white.
The seeker after white roses will find
things badly stacked against him, es-
pecially if he is looking for medium
quality. There are more of the high-
grade type in proportion than of the
lesser but there are only few places
where the high-grade will fit at this
time. Lily of the valley is scarce and
will so continue for obvious reasons.
Carnations run very poor as a rule and
there is little call for them. A good
many rambler rose sprays are seen and

they are worthy of a better market than is possible at this date. If they only could have come in two or three weeks earlier then there would have been "something doing."

PHILADELPHIA Conditions here continue fairly satisfactory. The supply of flowers has shortened up and is about equal to the demand which is as brisk as could be expected at this season of the year. In the rose market the American Beauty situation is greatly improved by the influx of some nice stock from "Down East" which helps out our shortened local supplies very nicely. Russell and Hadley are holding their own very well. Plenty of other good roses all down the list. The carnation situation is without special feature. Good demand for such lots as show extra quality but the great bulk arriving are naturally showing the effect of advancing season. Cattleyas are more

Flower Market Reports

(Continued from page 21)

plentiful and while the demand is still good prices have eased up a little. Quite a lot of southern gardenias have been received lately and they are taken up only in moderate quantity so that a good deal of these go to waste. Peonies still available in quantity and of very good quality. Very few reds to be seen—mostly pinks and whites. The sweet peas now arriving are mostly out-door stock and they are coming in soft on account of the copious rainfall which hurts their shipping and keeping qualities. Large supply and big variety in out-door flowers which move off fairly well and please the buyers who want big measure for little money.

Were it not for the almost unprecedented scarcity of flowers, business would be particularly good at present. There has been an unusual amount of funeral work, which together with a continuous round of conventions, and a few stray weddings has kept the demand almost up to the mark of early June. However, this demand has been utterly impossible to satisfactorily supply roses of all grades and lilies of the valley in particular, being almost impossible to secure in quantities. Neither is the outlook bright for some time to come.

The wholesale market was in a most deplorable condition last week. There was plenty of stock but the demand was slow causing a great surplus to pile up. The stock that is coming in is keeping up good in quality. A fine cut of gladioli comes in daily. Carnations and sweet peas are too many, the latter selling as low as 75 cents to \$1 per 1000. Lilies sell well and lily of the valley is up to \$5 per 100.

The weather thus far this month has not been conducive to the best of production. Recent storms have flooded out lily ponds and heavy falls of rain have beaten down the outdoor stock. The cold and wet are also having a very bad effect upon the asters, producing nothing but foliage and stems, with leaf and stem-rot threatening. Peonies are off the market and this has strengthened the demand for lilies, carnations and even gardenias for funeral work. American Beauty roses have been scarce and have cleaned up well. Local roses are getting small and poor with those from the north following them closely to that condition. There are but few good carnations. Large quantities of coreopsis have been coming in.

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage as regards prices and quality to place your order with us.

Soliciting your order through this ad cuts down the overhead selling expenses and you positively get lower prices and better quality. Our terms are liberal and are a guarantee that you get a square deal, all bulbs guaranteed true to name or money refunded.

Write us and upon request we will mail you our booklet giving prices f. o. b. New York or Chicago, and we also cheerfully furnish you with any information that may be desired. Those of our friends who will mail us a list of their requirements will find it has paid them to do so.

Awaiting to hear from you at your pleasure, we remain,
Yours very truly,
Westerbek & Klynn,
Sassanheim, Holland.

NEW BOOK JUST ISSUED

Plant Propagation Greenhouse and Nursery Practice

By M. G. KAINS

So many discoveries of new facts by plant investigators, shortcuts and "wrinkles" worked out by plant propagators, and nursery, greenhouse and garden methods simplified or made more effective, have made books hitherto available on plant propagation out of date.

There has also been an insistent call for a volume that would not only include the character of information wanted by nurserymen and other plant propagators, but also discuss the subject of plant propagation from the standpoint of fundamental principles, and include the latest conclusions advanced by investigators throughout the world.

This new book by Professor Kains will appeal with equal force to the amateur, the professional propagator, and the teacher in agricultural colleges and schools.

The book devotes many pages to special plant lists and condensed directions for propagation of vegetables, fruits, annual and perennial flowers, bulbs, ferns, orchids, cacti, evergreens, deciduous trees and shrubs, vines, water plants, greenhouse and house plants and palms.

The table of contents includes: An introduction on general principles, germination, seed testing, potting, layerage, bottom heat, cuttage, classes of cuttings, graftage, and theories and laws, Daniel's experiments in graftage, tree stocks and scion handling, grafting waxes and wound dressing, methods of grafting considered individually, budding methods, nursery management, and laws affecting nursery stock.

Illustrated 5½x7½ inches. 342 pages.
Cloth. Price, net, \$1.50.

During Recess

THE WARETOWN OPENING.

June 23, 24 and 25 were three notable days in the history of Commodore John Westcott's club house at Waretown, N. J. Guest from New York, Boston, Chicago, Cleveland and other cities came to help celebrate the sixteenth annual opening of this haven of refuge from the cares of a busy world. There was also a good contingent

**THE MAC TAVISH.**

Derelict on the Beach at Waretown.

from Philadelphia. The weather was fine except on the 25th and everybody enjoyed the hospitality of the host and the sea breezes—with all the other side adjuncts in fun and frolic to suit every individual taste.

A feature of the occasion was the presentation to the Commodore of a \$300 pool table, the gift of Bo's'n

TO THE HEART OF LEISURELAND

where woods are cool, streams alluring, vacations ideal. Between New York City (with Albany and Troy the gateways) and

"The Searchlight Route"

Trainer of Philadelphia. This will add greatly to the attractions of the bungalow for those who are devoted to that quiet, refined and delightful pastime which keeps many restless spirits out of mischief.

While out on the bay one of the party's boats was overhauled at Harvey Cedars on the 24th by what looked at first like a pirate craft but on closer inspection proved to be no more than an impetuous dash by two new arrivals—John Farquhar and "Bill" Stewart of Boston.

An attempt by the British fleet to recapture the Scottish cruiser MacTavish was foiled by the Sinn Feiners under the gallant leadership of Admiral Trainer and Bo's'n's Mate Donaghue. At last accounts the cruiser was still on the beach and the bold deft by aerogram from Admiral Trainer to Admiral Jellicoe was still unanswered. We would like to give you the wording of this deft but we are afraid it would burst the type.

Many beautiful speeches were made at the post-prandial exercises, one of the most feeling, philosophical and beautiful being by that picturesque seventy-seven-year old Adam Graham of Cleveland, O. Above all things Mr. Graham preaches "moderation" if we want to lead a long, healthy and happy life. Another notable contribution to the post-prandial was an original poem by J. C. Vaughan of Chicago. He voiced the sentiments of the old guard splendidly in the following lines:

THE OLD GUARD.

(Lines written by J. C. Vaughan, Chicago, Ill., addressed to Commodore John Westcott at the sixteenth annual opening of his Club House, June 23, 1916.)

The Old Guard greets the Commodore
At Waretown camp again,
Where stretch afar the seas that bore
The Argosies of Spain.

On Barnegat with the Commodore
John's called the boys once more,
Some near that port whence they depart
For an unknown shore.

Blue sky covers the summer day,
Hazy our straight away;
Shall the guard falter as the mists close in?
Shall the guard tremble, as the landmarks dim?

No! Haul her tight good Commodore,
Set her on the mark;
The sea's the Old Guard's open door.
Trackless path, and dark.

ENVOIE.

What tho the grey mist darkens
We'll hold her, head-on!
Though each for port bell hearkens
We're still with you, John!

The Commodore will be seventy-seven next birthday but he is hale and hearty as ever today and we all hope he may live to be a thousand.

GEORGE C. WATSON.

INTRENCHED AGAINST THE MOSQUITO.

Of in the stilly night,
Ere slumber's chain has bound me,
I feel the hungry 'skeeters bite,
Or hear them buzz around me.
Their drowsy hum
I hate, by gum!
Their gore I'd like to spatter!
But when, alas,
I make a pass,
Their bones I fail to scatter!
Thus in the stilly night,
Ere slumber's chain has bound me,
I wake and cuss with all my might,
The 'skeeters that surround me.
—Los Angeles Express.

The foregoing is a favorite recitation with the gentleman whose portrait accompanies these lines. Mosquitos and George C. Watson have been at war ever since that gentleman first landed

INTRENCHED AGAINST THE MOSQUITOS.

in this country sometime back in the last century. As one of the many million martyrs to the blood-thirsty Culex, Mr. Watson has fortified himself with remedies of many kinds, a few of which are seen in the picture, but he says that none of them are effective. However, the portrait of the gentleman himself is his latest and so characteristic that our readers will no doubt be pleased to see it.

FIELD DAY AT CROMWELL.

The Field Day at Cromwell Gardens, Connecticut, on Wednesday, June 21st, brought together a representative number of members of the National Association of Gardeners and the American Association of Park Superintendents from New York and New England points.

Delegates were met by representatives of the A. N. Pierson, Inc., at the trains, as they arrived at Hartford and Middletown, and escorted to the hotel at Middletown where they were received by Wallace R. Pierson and entertained at luncheon, after which the party proceeded to Cromwell. Arriving at Cromwell Gardens the guests were greeted by A. N. Pierson who welcomed them to the establishment of the company of which he is the head, after which the chiefs of the different departments escorted the visi-

PINO-LYPTOL

WEED KILLER

THE VERY NEWEST AND QUICKEST METHOD OF DESTROYING WEEDS, GRASS AND OTHER GROWTH IN GARDEN WALKS, GUTTERS, TENNIS COURTS, DRIVEWAYS, ETC.

This fluid absolutely destroys all weeds and other growth wherever applied, and its effect on the ground prevents the growth of fresh ones for a year and thus saves a great deal of time and labor, as no cutting, hoeing or hauling away of the weeds is required.

We manufacture the strongest line of DISINFECTANTS on the market.

P.-L. CHEMICAL CO., 507-509 W. 19th St., New York

CORRESPONDENCE SOLICITED.

tors about the gardens and through the large greenhouse ranges.

Looking down upon the gardens on the approach from the roadway the eye beheld a magnificent sight in the acres of plantings which were one mass of gorgeous color. The rose garden was the centre of attraction, although the visitors found much of interest in the different outdoor departments, including the rock garden which is now under course of construction. The mammoth greenhouse proved a revelation to some of the visiting gardeners, where the roses, carnations and chrysanthemum plants, in untold quantities, were found in excellent condition, as were also the many other varieties of flowering and foliage plants in which this company specializes.

The company maintains its own dairy, private water system and box factory and after the inspection of the entire plant, the opinion was generally expressed that Cromwell Gardens may appropriately be classed as a "plant-growing industry." All the details for the entertainment of the party were carefully planned—the usual afternoon rain was not even omitted.

The visitors enjoyed their visit to Cromwell Gardens and when they entered the automobiles to make their train connections for home, they were in one accord that the day had been one full of interest and instruction.

CUCUMBER MOSAIC DISEASE.

(From Bulletin of U. S. Dept. of Agriculture.)

A new disease of cucumbers, known as the mosaic disease, has appeared during the past few years in commercial greenhouses and in fields where cucumbers are grown for pickling purposes. Recent investigations of the disease have resulted in the discovery that it is closely related to mosaic diseases of other plants, and the present indications are that it can be controlled by the introduction of sanitary measures and insect control methods.

The mosaic disease is commonly known in Michigan, Indiana, and Wisconsin as "white pickle." In Minnesota it is commonly called "nubbins." When plants are attacked while very young, they are markedly dwarfed by the action of the disease, growth is slow, the runners are very much shortened, the leaves are correspondingly reduced in size, the plants blossom sparingly, and the amount of fruit is very much reduced. When older plants become diseased the principal visible effects are on the subsequent growth of vines and fruit, the vine tips and leaves being dwarfed and mottled

and the fruit malformed as described elsewhere.

The leaves of diseased plants are dwarfed, often curled and wrinkled, and usually have a mosaic or marbled appearance in which areas of light and dark green alternate. In some cases the leaves brown and die back from the tip.

The fruits are very conspicuously affected, being dwarfed, more or less mottled or blotched with areas of darker green on a background of light green, greenish yellow, or almost white. In the most decided cases the green areas are raised and appear as definite warts or protuberances, sometimes of considerable size, and the fruits take on many abnormal shapes. In some cases the fruits are almost white, hence, the name "white pickle." This name probably is due to a confusion of this diseased condition with the white or albino plants which typically bear white-colored pickles, and which have been known to occur occasionally in fields for many years. The discoloration and warty condition of the fruits, which often appear on cucumbers not more than an inch or two long, render them unfit for pickling purposes, so that in addition to the great reduction in yield caused by the disease, many, if not all, of the fruits produced by diseased vines are unmarketable.

In the greenhouse the disease is quite similar in its principal symptoms to those found in the field, the principal difference being that the disease appears to be more virulent, many of the plants wilting and dying.

Nature of the Disease.

The mosaic disease belongs to the same class as the other mosaic diseases of tobacco, potato, tomato, poke weed, and other plants, which have been known for some time. The exact cause has not been discovered, but it is considered to be what is known as a filterable virus, an agent of infection which is so finely divided that it will pass through a porcelain filter and still retain its ability to reproduce the disease when injected into healthy plants. The sap or juice of any portion of a diseased vine if injected into a healthy vine will produce the disease. The period of incubation, that is, the time which elapses from the inoculation of the vine to the first visible symptoms of the disease, in the greenhouse is from 7 to 14 days, while in the field it is usually 14 to 25 days. The agencies of transmission of the disease from diseased to healthy plants are doubtless many. It has been definitely proven that plant lice transferred from diseased to healthy plants will carry the disease. It is highly probable that other insects will be found

to act as carriers. It is also practically certain that the disease is spread by pickers when harvesting the cucumbers.

should be started as soon as the plants are up and continued throughout the season. The fields should be gone over repeatedly throughout the season, especially previous to the beginning of picking, and all mosaic diseased plants pulled and destroyed, as well as plants with which they have come in contact. Owing to the fact that greenhouse conditions are much more completely under control than field conditions, it would seem an easier task to control the disease there. As previously stated for field control, all diseased plants should be pulled and destroyed as soon as found and the insects should be eradicated to prevent their spreading the disease.

In pastures where there are only a few clusters, the same treatment recommended for lawns is the most advisable. When the pastures are badly infested, however, and cultivation is practical, it is often more satisfactory to plow and cultivate as recommended for cultivated fields. Pasturing with sheep sometimes proves effective.—*Weekly News Letter*, U. S. Dept. of Agri.

NEWS NOTES.

Taunton, Mass.—V. B. Olson has bought the greenhouses of E. F. Rose on Bay street, and takes possession July 1st.

Saddle River, N. J.—Miss Helen J. Esler of Saddle River, N. J., and Mark McKinley Inskeep of Kenil, N. J., were married on June 24th at the home of the bride's parents. Mr. and Mrs. John G. Esler. Miss Esler was known to many members of the S. A. F. and O. H. as her father's assistant in Florists' Hail Association affairs.

 Market Sts.

GREENHOUSES BUILDING OR CON- TEMPLATED.

Kansas City, Mo.—A. Mohr, one house.

Tupelo, Miss.—Tupelo Floral Co., additions.

Litchfield, Ill.—Cottage Greenhouses, one house.

Greensburg, Pa.—George S. Ferguson, one house.

Boston, Mass.—H. P. Falk, 33 Berry street, one house.

Newport, R. I.—Miss Edgar, Sunny-side place, one house.

Kingston, N. Y.—Geo. F. Polley, 63 O'Neil street, two houses.

Columbus, Miss.—Columbus Floral Co., two houses each 24 x 100.

Mishawaka, Ind.—David Pugh, Cedar street and Edgewater drive, range of houses.

At the estate of Walter Hunnewell in Wellesley, Mass., the old greenhouses are being replaced by a range of modern steel, curved-eave houses to be erected by the King Construction Co., consisting of palm house 25 x 60 ft., orchid house 25 x 60 ft., carnation house 25 x 60 ft., plant house 25 x 60 ft., grapery 25 x 60 ft., each house being divided into two compartments. The range is to be novel in that instead of the usual way of having the growing houses "valley" into the palm house they are to be connected with the palm house by small passages, and the palm house in turn is connected with the potting shed by means of a passage 12 x 16 ft., which will be used for propagating. Patten & Co., Tewksbury, Mass., have placed an order for the erection of a King house 42 x 200 ft., iron-frame. James

Wheeler of Natick has also given an order for the materials for a semi-iron house, 35 x 200 ft. These contracts were taken by P. A. Gavin, Boston representative, whose office is at 113 State street.

On Ventilating Apparatus and Greenhouse Fittings
ADVANCE CO., RICHMOND, IND.

Note that the side ventilating rods are brought down beneath the bench. Hand wheels are on side of bench out of way.

Some Construction Reminders

LEST the much "selling talk" about other private houses, may temporarily allow you to forget some of the distinctive strong points about ours, let's just run over a few of them.

1. The curved roof bars are re-inforced with bands of steel inserted in the bars that run from the gutter to the purlin.
2. All gutter leaders are copper—not tin or galvanized iron painted.
3. The side vents are now operated from hand wheels on side of bench, and the rods are beneath the bench. Close up arms are used. No more injuring plants as is bound to happen with the old brake wheel twisting method.
4. Both heating returns and flows on short coils unless otherwise specified, are valved separately. No more backing up of the hot water in the returns, spoiling your temperature control.
5. The gutter end stops are of cast iron, the same as the gutter. We flatly refuse to use a wood stop.
6. All materials are painted one coat before leaving the factory.

We go anywhere for business. Or to talk business.

How the semi-curved construction looks from the outside.

Both the flow and return pipes are valved. Note vent gear above pipes.

Lilium Willmottae

A New Introduction From China.

Boddington's Re-selected Winter-flowering Spencers as grown by Wm. Sim, Cliftondale, Mass.

Boddington's Winter-Flowering Spencer Sweet Peas

The New Sensational Australian Spencer Winter-Flowering Sweet Peas

The following varieties are, without doubt, the greatest and most valuable novelties introduced since the famous Yarrowa Spencer marked the commencement of a new era in Winter Sweet Peas. Owing to the intense drought in Australia, the crop of this splendid Sweet Pea is very short and our stock is limited; we therefore advise early ordering, to avoid disappointment.

NOW READY FOR DELIVERY

CONCORD DAYBREAK

Cream with standard heavily edged buff-pink. As the flower opens the cream changes to almost white, and the cream pink edging to a faint rosy tinge. Pkt. (18 seeds) 75 cts.

CONCORD CHARM

Combines the delicate shades of white and blue-white wings and very light heliotrope standard, shading to nearly white.

CONCORD COUNTESS

Most attractive tint of pink, the ideal flower color.

CONCORD COQUETTE

Has a white ground, faintly marked or mottled light rosy carmine, the standard showing color more heavily than the wings.

CONCORD EMPEROR

A rich crimson red variety. One of the best and most useful varieties in this class.

CONCORD PURPLE

Delightful shade of mauve purple, changing, as the flower ages, to purple-blue.

CONCORD RADIANCE

A very striking shade of rosy magenta; this variety is one of the showiest. The color varies according to the age of the flower, but this adds to its attractiveness.

CONCORD WINSOME

Of a delightful shade of pink, tinted lavender; a most fascinating color. A specially beautiful variety.

COERULEA

A glorious Sweet Pea of the most delightful shades of delicate sky-blue, sometimes a little lighter.

RUBY

A glowing light crimson-scarlet color, blooms of good size. Spencer form, carried in threes, well placed on good wiry stems.

SALMONEA

A rich rosy salmon variety of great merit.

Prices on all the foregoing, except Concord Daybreak: Pkt. (18 seeds) 35 cts.; 5 pkts. \$1.50.

Yarrowa

Bright rose pink, with light wings. Seed sown early in September will flower about December 1, and bloom profusely and continuously until May. They are borne usually in fours on extra long, strong stems. Awarded Certificate of Merit, International Flower Show, New York, 1914 and the Pennsylvania Horticultural Society, March, 1915.

Pink and White

	1/4 oz.	1 oz.	1/4 lb.	1 lb.
Christmas Pink Orchid. Standard bright pink, wings white, an improvement over the Pink and White Orchid.	\$1.00	\$3.00	\$10.00	\$25.00
Pink-and-White Orchid. Similar in color to Christmas Pink, but produces a larger flower on longer stems.	.25	.75	2.50	9.00
The Czar. Standard rose, wings white, mottled with pink; strong grower.	.25	.75	2.50	9.00

Pink and Light Pink

	1/4 oz.	1 oz.	1/4 lb.	1 lb.
Bohemian Girl. One of the finest pink selfs. The same shape as Mrs. A. A. Skach, but the color is darker, with light scarlet blush.	\$8.50	\$1.50	\$4.50	\$15.00
Fordhook Pink. The color is a beautiful rose pink on white ground shading deep pink toward the edge of the standard and wings.	1.00	3.00	10.00	25.00
Morning Star. Exceptionally large flower of self pink color.	1.00	3.00	10.00	25.00
Mrs. Jos. Mandl. Large shell pink with extra long stem. Flowers very ruffled, becoming a brick red pink the longer they are out.	.40	1.25	3.75	14.00
Miss Florence Roland. Large pink with salmon; fine shape and good grower.	.50	1.50	4.50	15.00
Mrs. A. A. Skach. Beautiful, clear, bright pink. Much larger than Countess Spencer and slightly darker.	.35	1.00	3.50	12.00
Rose Queen. A pink of sterling merit and of most pleasing shade. Sown indoors July 25, first flowers picked October 1, continued blooming until Easter. Could not be improved upon.	1.70	5.00	18.00	65.00
Selma Swenson. The color is clear light, soft pink with wavy petals.	1.00	3.00	10.00	25.00
Yarrowa. Bright rose-pink. The best pink for florists. Continuous bloomer, almost always 4 flowers on a stem. Introducers re-selected stock. California grown seed.	.60	2.00	7.00	24.00
	.35	1.00	3.50	12.00

White and Blush

	1/4 oz.	1 oz.	1/4 lb.	1 lb.
Bridal Veil. Pure white. In size and purity of color, one of the best.	\$8.35	\$1.00	\$3.50	\$12.00
Mrs. M. Spanolin. Double; white. Black seeded.	.35	1.00	3.50	12.00
Venus. Standard slightly blush-pink; in winter more white.	.50	1.50	4.50	15.00
White Orchid. Pure white; has stood the most critical tests.	.35	1.00	3.50	12.00

Red and Rose

	1/4 oz.	1 oz.	1/4 lb.	1 lb.
Belgian Hero. A beautiful rose colored variety. Handsome flower.	\$1.00	\$3.00	\$10.00	\$25.00
Fordhook Rose. A charming shade of rosy carmine. Well recommended.	1.00	3.00	10.00	25.00
Orchid Beauty. Dark rose pink, with orange blush.	.25	.75	2.50	9.00
Red Orchid. Bright cherry-red, very fine shape, large and free bloomer.	.35	1.00	3.50	12.00
Sensation Scarlet. Early, very productive and throws three to four flowers in stems. Bright scarlet.	1.00	3.00	10.00	25.00

Apricot and Orange

	1/4 oz.	1 oz.	1/4 lb.	1 lb.
Apricot Orchid. Mostly apricot self. A cross between Miriam Beaver and Mrs. A. A. Skach.	\$8.60	\$1.50	\$4.50	\$15.00
Orange Orchid. Standard orange, wings dark salmon pink, beautifully colored and formed.	.60	1.50	4.50	15.00

Lavender and Blue

	1/4 oz.	1 oz.	1/4 lb.	1 lb.
Anita Wehrmann. A beautiful shade of lavender. Large flowers, long stems, very prolific and well fixed.	\$1.00	\$3.00		
E. Burke. The flowers are large, borne usually in fours on long strong stems; very early and fixed. We recommend this as the best lavender winter-flowering Spencer to date. Trade pkt. (25 seeds) 50c.	2.50	6.00		
Mrs. John M. Barker. The standard is blue, with glistening dark rose, wings light blue on white ground.	.50	1.50	4.50	15.00

New crop seeds ready for delivery in late July and early in Aug.

Any other variety not in above list can be supplied.

ARTHUR T. BODDINGTON CO., Inc., 128 Chambers St., New York City

GERANIUMS

HYDRANGEAS FOR SUMMER-BLOOMING

We have an unusually fine stock of hydrangeas,—fine symmetrical plants, well shaped and well budded. They are just beginning to bloom and will remain in bloom during July and August. These plants are in great demand at summer resorts for lawn and piazza decoration.

We have a fine lot of Otaksa, strong plants in 5-inch pots, one to two flowers each, at \$3.00 per dozen; also in 6-inch pots, two to four flowers each, with buds well advanced, showing color, at \$6.00 to \$9.00 per dozen.

We offer, also, the following varieties in 14-inch tubs: Otaksa and the new French varieties.—Avalanche, Fraicheur, E. G. Hill, La Lorraine, Mme. Maurice Hamar, Mme. E. Moudilhe, Mile. Renard Gaillard, and Radiance. These are good sized plants in tubs, very well budded. \$3.00 and \$4.00 each.

We have, also, fine specimen plants of Otaksa in half-barrels—fine large specimens, well budded. \$10.00, \$12.50 and \$15.00 each.

FERNS

Nephrolepis elegantissima compacta, 2½-inch pots, \$6.00 per 100; 3½-inch, \$3.00 per dozen; 6-inch, \$6.00 per dozen.

Nephrolepis elegantissima, 2½-inch pots, \$6.00 per 100; 6-inch, \$6.00 per dozen; 8-inch, \$12.00 per dozen.

Nephrolepis Teddy, Jr., 2½-inch pots, \$6.00 per 100; 3½-inch, \$2.00 per dozen, \$15.00 per 100; 6-inch, \$6.00 per dozen; 8-inch, \$12.00 per dozen.

Nephrolepis Smithii, 3½-inch pots, \$3.00 per dozen; 5-inch, \$6.00 per dozen.

Nephrolepis muscosa, 3½-inch pots, \$3.00 per dozen.

BOXWOOD—Pyramids, 3 ft. high, \$2.50 each; 3½ ft. high, \$3.00 each; 4 ft. high, \$4.00 each.

DRACAENA INDIVISA—Fine large plants for centers of large vases—8 inch pots, \$2.00, \$2.50 and \$3.00 each.

FICUS ELASTICA—Fine plants, 6-inch pots, \$6.00 and \$9.00 per dozen.

ENGLISH IVY—Strong plants, 4-inch pots, bushy, \$12.00 per 100.

THE MacNIFF HORTICULTURAL COMPANY

52, 54 and 56 Vesey Street The Largest Horticultural Auction Rooms in the World NEW YORK CITY

BAILEY'S NEW STANDARD Cyclopedia of Horticulture

Six large quarto volumes.
More than 3,600 pages. 24
exquisite full-page color
plates. 96 full-page sepia
halftones and more than
4,000 text engravings. 500
collaborators. Approx-
imately 4,000 genera, 15,000
species and 40,000 plant
names.

The new Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is not merely an ordinary revision or corrected edition of the old Cyclopedia, but it is a new work from start to finish with enlarged boundaries geographically and practically; it supersedes and displaces all previous editions or reprints of every kind whatsoever. It is both an Encyclopedia and a Manual, for with the aid of its Synopsis and Key, amateur and professional alike may quickly identify any plant, shrub or fruit contained within the set, and then receive expert instructions for its cultivation. Price \$6.00 per volume. Four volumes have now been issued and the others will follow in succession. Order from

THE KENILWORTH GIANT PANSY

82. **ORCHID FLOWERED, Mixed.** A dwarf, free bloomer, with a range of delicate colors that do not exist in any other Pansies: a remarkable combination of light rose shell pink, bluish mauve, fawn, light brown, orange and chamois.

New Early-flowering or Winter-blooming Giant Pansies

An entirely new and distinct strain of Pansies. The main advantage of these new Pansies over all hitherto existing Pansies is the extreme earliness of flowering and its unusual hardiness, which enables them to withstand quite severe Winters, and to bloom right on into the Summer. Sown at the same time as other Pansies, they begin flowering the early part of March or as soon as the snow is off the ground, many times having four or five large flowers to a plant, when all other Pansies are only showing buds. The flowers are large, well formed and fragrant. They are highly recommended for Autumn planting on graves and for very early bedding, as well as for early cut flowers.

- 14. **WINTER SUN.** Golden yellow, with dark eye.
- 15. **ICE KING.** Silvery white, with dark blue eye.
- 16. **CELESTIAL QUEEN.** Light or sky blue.
- 17. **CHARM OF MARCH.** Dark velvety blue.
- 18. **EACH COLOR SEPARATE OR MIXED.** The above four colors with other shades and variations. 500 seeds 50c., 1000 seeds \$1.00, 1/2 oz. \$2.00, 1/4 oz. \$3.75, 1 oz. \$15.00.
- 20. **PRINCESS.** The New Upright Pansy.

This strain is entirely distinct from all others. It is absolutely compact, upright growing, and extremely weatherproof, enduring many storms without damage to its flower. The flowers are mostly blotched and frilled like the Masterpiece, of good form and heavy, velvety texture, on heavy stems carried well above the foliage. Attractive by the brilliancy of its colors.

500 Seeds 20c., 1000 Seeds 35c., 1/2 oz. \$1.00, 1/4 oz. \$2.00, 1 oz. \$7.50.

FREE OFFER RAINBOW is a mixture of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every \$1.00 worth of Pansy seed I will send, free, 1000 seeds of Rainbow and with other amounts in like proportion.

Seeds are sold grown by myself and are offered in the following mixtures and separate colors.

- 22. **GIANT KENILWORTH STRAIN.** The flowers are of perfect form and substance, many of the immense flowers are from 3 1/2 to 4 inches. It is a striking collection of beautiful colors and markings, rich, with shades of red, brown, bronze, mahogany and many others too numerous to mention. Light, Medium or Dark Mixtures.
- 24. **GIANT KENILWORTH SHOW.** An extra fine strain of large flowers; the immense flowers are of circular form and great substance. A beautiful collection of colors and markings.
- 26. **GIANT KENILWORTH CUT FLOWER MIXTURE.** Is a distinct class by itself, surpassing all other strains as a cut flower or for exhibition purposes, for inside or outside growing; the large flowers are carried erect above the foliage on heavy stems, 7 or 8 inches long, in the most graceful manner, and stand the hot, dry weather well.
- 28. **GIANT MASTERPIECE.** A remarkable type; the curled, wavy petals giving the flower a double appearance; large flowers of great substance, on long, strong stem.
- 30. **GIANT THREE AND FIVE BLOTCHED PANSIES.** A superb mixture. Flowers large and of circular form and of great substance. The display of coloring is unsurpassed. A combination of almost every shade of rich, velvety colors; reds are particularly conspicuous; the petals being distinctly marked with three or five large, dark blotches.
- 32. **GIANT PARISIAN.** The flowers are of enormous size and beautifully marked, mostly fine dark blotches on white and yellow ground; an unusually showy mixture.
- 34. **GIANT BRONZE.** A fine mixture of all shades of velvety brown, bronze, Havana brown, mahogany and copper shades.
- 45. **GIANT APOLLO (Masterpiece type).** New bronze, veined and blotched. Strongly frilled petals. A superb Pansy.
- 47. **GIANT ERFORDIA (New Red).** Of the Masterpiece type. The largest and best red. The result of ten years of selection. The color is of a deep, smooth, velvet red shading to scarlet, with curled petals and sweet scented.
- 49. **GIANT MERCURY.** New. A deep blackish purple, really self-colored, without blotches or spots. The flowers are extraordinary in size and substance, being the largest flowers of all self-colored Pansies.

Prices of Kenilworth Pansy Seed

All sorts and mixtures except the new Pansy Princess and the Early Flowering or Winter Blooming are \$5.00 per oz., \$1.25 per 1/4 oz.; 5000 seeds \$1.00; trade pkt. of 1000 seeds 25c.; any 5 pkts. \$1.00. Please order by number.

GIANT PANSY SEED In Separate Colors

- 8. Mme. Perret. Red and wine shades.
- 42. Adonis. Light blue, white center.
- 44. Black. Almost coal black.
- 48. Lord Beaconsfield. Purple, shaded white.
- 64. Goliath. Large, curled yellow, blotched.

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE

"If vain our toil, we ought to blame the culture, not the soil."—Pope.

Aerides

From now until the fall these should be treated liberally with water. Apply sparingly at first, and gradually increase to a generous supply. Where the compost is still in good condition a top dressing of live sphagnum is all that will be required. Remove the old material to the depth of an inch or so and replace with fresh sphagnum. Where the compost has become decayed or sour, it must be shaken out entirely and the roots cleaned by gently spraying and repotted in baskets. Frequent spraying or syringing is highly beneficial. The fresh roots absorb a great quantity of moisture from the atmosphere, and to grow them successfully one must give them lots of moisture.

Bulb Compost

Bulbs like a light and rather rich soil. One-third of the whole should be decayed manure. If you have any spent hotbed manure or such as has been used in the make-up of a mushroom bed, either of these is excellent for bulbs. A few shovels of soot and some sharp sand should also be added. Turn the soil over twice or thrice to thoroughly mix it. It will be some time before the French or Dutch bulbs arrive, but it is better to prepare a pile of compost for them now rather than when they are on the place. It is much better to leave out bone and all chemical fertilizers. These are more likely to be harmful than helpful. If you stacked up a pile of sod and cow manure last fall chop this down and throw it in a heap. With the pressure of other duties there is a likelihood of the compost heap being somewhat neglected in that they are allowed to become overgrown with rank weeds.

Chrysanthemums

During the hot weather, damping down will be necessary two or three times a day on the walks or paths. Go over the beds every day and water the dry places. Do not let the plants get overrun with fly before using effective means to keep them under control. It should always be remembered that these plants will never stand humid or stagnant atmosphere. So first of all see that they have plenty of fresh air, and a good syringing early every afternoon, which will allow the foliage time to dry out before night, but during dark weather keep the plants as dry as possible. Watch for other insects besides fly. There are quite a few that make the chrysanthemums a host plant, such as caterpillars, grasshoppers, red spider and thrips. Hand picking for the two former and plenty of syringing for the two latter.

Eucharis amazonica

Eucharis can be cultivated in beds, benches or pots. Pot-grown plants are best where only a few are to be grown. For compost use fibrous loam, lumpy dried cow manure, broken brick, char oal and coarse sand. It is

best to shake out the finer soil as what is needed is a porous soil through which water will pass readily. Established plants, started in midwinter and now coming out of 3 or 4-inch pots, are to be preferred. In summer the pots do well plunged in frames. They make much finer growth here than in the greenhouses. The plants must be shaded during summer and except in the coldest winter weather, a light shade should be used, as bright sun turns the leaves a pale color. Any grower who has not grown *Eucharis amazonica* should try a few of them.

Smilax

Vigorous plants coming out of either 3 or 4-inch pots make ideal stock. In selecting a place for a bed of smilax it should be always borne in mind that smilax will want at least 60 degrees of heat in the winter and at least ten feet for head room. Allow a foot between the rows and about nine inches between the plants in the rows. Keep a well ventilated and moist growing temperature. Syringe twice a day to prevent red spider and help the plant to sustain itself while developing its foliage. Don't allow the young trailing shoots to ramble and become twisted before you string them, but run the string up for the young plants soon after they are planted. Give water around the ball for some time yet, but when they begin to push their roots into the middle of the rows water all the bed.

Time to Think of Christmas

Give attention to all the plants most likely to be in general demand for this date. If you are short of any plants now is a good time to place your order through the medium of HORTICULTURE. Nothing like keeping the place well stocked up.

Next Week: Achimenes Asparagus Sprengeri; Housing Carnations; Lorraine Begonias Mignonette for Winter; Reminders.

Lilium Willmottae

Our cover illustration this week is that of a new Chinese lily, discovered, named and introduced to this country and to England by E. H. Wilson. Its name was given in honor of Miss Ellen Willmott, an enthusiastic English amateur.

This lily grows about 3 feet in height, with wiry stem clothed with narrow oblong leaves. The flowers are apricot yellow, spotted with brown, 3 inches or more across and strongly recurved. It is perfectly hardy and flowers outside in late June or early July. It was shown for the first time in this country at Horticultural Hall, Boston, on May 27, 1916, by William Anderson, gardener for Bayard Thayer of Lancaster, Mass., and there received the award of a silver medal by the Massachusetts Horticultural Society.

A reminiscence

As everybody who reads the newspapers knows, Mrs. Hetty Green "the world's richest woman," has passed away. Mrs. Green's reputation for closeness in money matters is well known. Her son Col. E. H. B. Green, who now inherits most of her fortune does not seem to have inherited this particular trait of character, however. After he had embarked in the florist business on a large scale in Dallas, Texas, Col. Green became interested in the S. A. F. and took out life membership. Attending the convention in Dayton, O., in 1906 he again paid for life membership. On being apprized by Secretary Stewart of the over payment, instead of accepting the refund of thirty dollars he promptly instructed that it be applied to life membership for his foreman. This is a bit of unwritten history.

"On tiptoe for a flight"

The most interesting horticultural event scheduled for the present month is the meeting and exhibition of the American Sweet Pea Society to be held at Bar

Harbor, Me., on July 15 and 16. The weather thus far has been propitious for the growth to perfection of the somewhat exacting flower which is to be thus honored and unless some untoward conditions should interpose the display is expected to be a most extraordinary one. It is not often that the triple attraction of a sensational exhibition, a coastwise ocean trip and a visit to a most picturesque fashionable summer resort in the height of the season is presented. This opportunity coming in a year when there happens to be no other convention excursion within the means of many of the craft in the eastern part of the country will, no doubt, be very generally welcomed and a record attendance on this occasion will not be surprising. All those who do go will be well repaid.

A commendable custom

The custom of early closing of offices and stores during the dull midsummer season has come into favor very slowly among the florist people, wholesale and retail. The necessity for prompt handling and disposal of the goods he carries has so possessed the mind of the florist that it has become a sort of second nature to him to feel he must be at "beck and call" for service at any and all unseasonable hours, early and late, Sundays and holidays included. But gradually he is coming to realize that one principal effect of his self-sacrifice is to encourage in his customers the bad habit of buying "from hand to mouth" and expecting to always find whatever they may call for kept in stock to accommodate them at a moment's notice. At best, all departments of the flower producing and flower selling industries are onerous in their demands upon the toilers, from the boss down to the errand boy, and it is only fair that the long and irregular hours, and the absolute forfeiture of all the holidays which others are privileged to enjoy should be compensated for, in part at least, by a liberal shortening of the hours of duty during the season when this can be done without grievous loss or embarrassment to anybody. The occasional inconvenience to an improvident customer who can get his orders in earlier when he finds he must, should not count.

As between so- cieties

The newly born peony society of the Northwest has our best wishes for a long career of usefulness. HORTICULTURE cannot, however, contemplate with unqualified approval any action or the advancing of any policy the purpose or ultimate effect of which is the disintegration or weakening of any worthy existing national or other body. It does believe, however, in the formation of local organizations for special work in any and all places where sufficient enthusiasm can be kindled to carry them along successfully. A national association backed by a well-distributed number of such organization is the ideal for the performing of certain functions which can best be handled by such a central organization. This prompts us to ask why this proposed sectional society should not organize under the wing of the existing American Peony Society. Such an affiliation need not unfavorably affect the usefulness of the new organization but, rather, add strength to both bodies and thus tend to facilitate the progress of the peony towards a larger place in American gardens and in commercial floriculture, which, we assume, is the purpose of both. Nobody will deny that the American Peony Society has done much valuable work in past years, particularly in the clarifying of nomenclature and a certain gratitude and loyalty is accordingly due. If the national society is not now rising to the full measure of its responsibilities as such, the good old remedy of reform from within, in preference to an assault from without, is still available.

The Androsaces

Among the more difficult of the rock-plants, or alpine—are these little members of the Primula family, coming from the highest parts of the Alps, and living there in such intense cold and under such extreme conditions that any other plant life, even that equally well provided, would perish.

Typical endemic species of this harsh climate, they represent a class of plants that may well be called "cushion plants," forming, as they do, a moss-like, compact growth in adaptation to the combined cold and dryness of their habitat. They are the most alpine of alpine plants. In a number of cases of alpinism we find representatives in the lower hill pastures or sunny meadows, but not so with the Androsaces. Gentians and Primulas will be found in the lower land, but not the Androsaces. As a natural result they are the dwarfest of the class, some of the smallest Primulas being giants in size compared with them.

The Androsaces resemble the Primula in flower, agreeing in most characteristics, but having the tube of the corolla narrower at the mouth. On account of the short summer in their habitat their flowers open as soon as the snow is melted. They can be grown in a properly formed rock garden in pure air, with good drainage, but are sure to die quickly in a smoky atmosphere, and stagnant water is fatal. Their small, downy evergreen leaves (some have smooth leaves) will retain much more dust than many of the other smoother and larger-leaved evergreen alpinism. The Androsaces will thrive in small fissures between firm rocks or stones, firmly packed in a sandy peat or a very sandy or gritty loam, not less than fifteen inches deep. They should be placed so that no moisture will get at them in winter and so that in summer they may enjoy a cool soil in a moist atmosphere with plenty of sun. It is all the better if a few pieces of sandstone can be strewn over the surface of the bed so that once the ground beneath is well moistened, they will not suffer from any ordinary drought. They are not deeprooted plants, provided they can get a supply of water near the surface, and always prefer to send their roots along the face of some stone at a small depth, rather than to sink vertically to any considerable distance. Shade with them is entirely out of the question.

If such a condition as that named above cannot be given, some chances of success may be gotten from a level bed of sandy peat, provided it is well drained and the plants protected from moisture in winter by placing a piece of glass over them. Here great care must be taken to keep out the stronger growing plants, which such a soil and condition favors, for they will soon shade and kill the smaller plants.

The following is a short description of some of the best known varieties.

A. carnea: One of the prettiest and most distinct. Very early. Known by its small pointed leaves, not gathered in rosettes but regularly clothing the somewhat elongated stem like a small twig of Juniper. Flowers a lively pink or rose with yellow eye. Easily propagated from seed sown in pans of sandy soil as soon as gathered; also by division.

A. carnea var. eximea: Larger than the last, hardier and more robust. Flowers exactly like the above except one inch larger and of more substance. Grows very rapidly in tufts three inches high with leaves about one inch long and one-eighth inch wide at the base. A limestone soil is fatal. Increased by division.

A. Brigantica: In every way like the last named variety except flowers white. The same position and soil suits it.

A. Chamaejasme (Rock Jasmine): This species does not form the close cushion-like growths like some of the others but makes larger rosettes of fringed leaves. The flowers are borne on stout stems, rarely more than an inch in height but varying from that to five inches in some cases,

according to the vigor of the plants and their position. Flowers freely. This plant is one of the most worthy of culture of all alpinism and one of the easiest to grow on open rock work in a deep and well drained rich light loam in a sunny position, the surface of the soil being almost completely covered with small pieces of sandstone to prevent evaporation and also to preserve the plant from injury. It should get plenty of water during the summer months and be exposed to the full sun. It dislikes lime and succeeds best in river sand and peat.

A. ciliata (Fringed Androsace): Practically identical with the above but with fewer flower-stems and twice as long as the leaves. This plant is, by some, considered a variety of the above.

A. cylindrica: This is another variety with stems rising to one-half inch in height, with persistent leaves which form columns on the stems. Flowers pure white in spring. Should be treated like *A. pubescens*.

A. Helvetica (Swiss Androsace): This species forms dense cushions about one-half inch in height with small fringed leaves tightly packed in small rosettes. Each rosette rests on the top of a little column of old and dead, but hidden, and half-dried persistent leaves. Flowers white with yellowish eye, one from each rosette, and about twice as large as the rosette from which it rises. This plant requires considerable care in cultivation, perfect exposure to the sun well-drained, but never dry position.

A. imbricata (syn. *A. argentea*): Differs from the others in having rosettes of a silvery color. Its pretty white flowers are without stalks and rest so thickly on the rosettes as sometimes to overlap each other. Flowers in summer.

A. pubescens: Has a rather large solitary white flower with pure yellow eye rising just above the closely packed leaves, the surface of which is covered with stalked and star-like hairs. The unopened buds look like small pearls set in a tiny five-cleft cup and are on stems barely rising above the dense cushion formed by the plant. It flowers in July and August in its natural home, but with us will blossom in spring or early summer.

A. sarmentosa: This is a dwarf tufted species from the Himalayas, found at elevations of 11,000 to 12,000 feet. Flowers borne in trusses of from ten to twenty blossoms on an erect Primula-like scape and at first sight resembling the inflorescence of a bright pink, white-eyed Verbena. It is easily propagated from runners which plentifully overhang the side of a pot. This species is difficult to keep over winter unless protected by a pane of glass. Fine sandstone should be put under the rosettes and all over the surface of the soil to keep all parts except the root from contact with the soil. A dry calcareous soil is best.

These and many others may be found to be valuable additions to our rock gardens. In a hot rock garden it will be best to give these plants a northwest exposure.

All delicate alpinism need to be dressed with leafmold when they start into growth in the spring, and many will shrivel up and die for want of it in the dry winds of early spring.

It is interesting to note that in the region from which the Androsaces come in the Alps—namely, the region just below the snow line and above the tree line, that there are to be found 1020 different species of which some 700 are strictly native to this zone; the others having representatives in the hill pastures and meadows below the tree line. It is noteworthy that in this zone there is a marked predominance of species that affect moist localities which are also found in the north. Some species have been traced back to the Steppes of Central Asia from whence they followed the glaciers north, and were, in the second glacial period, forced south again, landing eventually on the highest summits of the Alps, where, finding conditions suitable to their welfare they have staid ever since. These journeyings of plants, while they consume but few words, occupied thousands of years, and it is interesting to read of the wanderings of many species now found in different quarters of the globe.

Hubert H. Canning.

Jamaica Plain, Mass.

AMERICAN SWEET PEA SOCIETY

The eighth annual exhibition and convention of the American Sweet Pea Society will be held at Bar Harbor, Me., under the auspices of the Bar Harbor Horticultural Society on Saturday and Sunday, July 15th and 16th, 1916.

PROGRAM.

Saturday, July 15, 1916, 3 P. M.

Addresses of Welcome by the President of the Bar Harbor Horticultural Society.

President Gray's Address.

Secretary's Report.

Prof. A. C. Beal's Report on Our Trial Grounds at Cornell University.

Treasurer's Report.

Nomination of Officers for 1916-1917.

Invitations for the next meeting place.

Lecture by David Burpee, "The Future of the Sweet Pea, and the possibilities of securing a pure yellow variety."

Election of Officers.

Addresses and Discussions.

Question Box.

Sunday, July 16, 1916, 10 A. M.

Unfinished Business (if any).

List of Prizes, Etc.

Entries must be made on the forms supplied by the Secretary, Harry A. Bunyard, 40 W. 28th street, New York City, and mailed to reach him in New York not later than Wednesday, July 12th. After this date address communications care of A. E. Thatcher, Bar Harbor, Me.

All exhibits must be staged by 12 o'clock on Saturday, July 15th.

Exhibits sent by express should be addressed as follows:

For Exhibition.

Express prepaid. Perishable.

Must be Delivered Immediately.

A. E. Thatcher, Bar Harbor, Me.,

Manager.

Sweet Pea Exhibition.

Section A—Private Gardeners.

Class A. 1. Arthur T. Boddington Co., Inc., Challenge Silver Cup, value \$50. For a collection 25 varieties, not less than 20 stems to a vase, to be shown with sweet pea foliage only. To be won twice by the same exhibitor. Also cash prizes of \$25, \$15 and \$10.

A. 2. Weeber & Don Prize. For 100 sprays mixed, arranged for effect, \$5.00.

A. 3. Thorburn Prize. Silver Cup, for 12 vases, 12 Spencer varieties, 20 blooms to a vase.

A. 4. Breck Prizes. For 3 vases, 25 to a vase, Spencer varieties: 1st, \$7.50; 2d, \$2.50.

A. 5. Dreer Prizes. Vase of Constance Hinton: 1st, \$5.00; 2d, \$2.50.

A. 6. Vase of Mrs. P. Hallen: 1st, \$5.00; 2d, \$2.50.

A. 7. Hitchings' Prize. Silver Cup, for 8 vases, 20 stems to a vase, 8 Spencer varieties named.

A. 8. Carters Tested Seeds Prizes. Three tubs of sweet peas, any color, in bloom: 1st, \$10.00; 2d, \$5.00.

A. 9. National Sweet Pea Society's (Great Britain) Prizes. Display for effect: 1st, Silver-Gilt Medal; 2d, medal.

A. 10. Farquhar & Co. Prizes. For 6 varieties, 1 vase of 20 sprays to each variety: 1st, \$12.00; 2d, \$8.00.

A. 11. National Association of Gardeners' Prize. For the most meritorious exhibit by a member of the association: Silver Medal.

Section B—Private Gardeners and Amateurs.

Class B. 1. Burpee Prizes. 12 vases, 12 varieties: 1st, Silver Cup, value \$25.00, and \$10.00 cash; 2d, \$10.00; 3d, \$5.00.

B. 2. Stumpp & Walter Prizes. 6 vases, 6 Spencer varieties: 1st, \$10.00; 2d, \$5.00.

B. 3. Michell Silver Medal for 6 vases, 6

Spencer varieties.

B. 4. Michell Bronze Medal. For 25 blooms illuminator.

B. 5. Watkins & Simpson Prize. 6 vases of Spencer, 6 varieties: 1st, \$10.00.

B. 6. Bunyard Prize. For the most novel arrangement of sweet peas: 1st, \$10.00; 2d, \$7.50; 3d, \$5.00.

B. 7. Coats Prizes. Decoration for table of eight covers: 1st, a Silver Cup and \$25.00; 2d, \$15.00; 3d, \$10.00. Exhibitors will be allowed to use sweet pea foliage, asparagus, smilax, gypsophila, or all; ribbons also allowed.

B. 8. Kennedy Prizes. 12 vases, 12 varieties: 1st, \$15.00; 2d, \$10.00.

B. 9. Malvern Greenhouses Prizes. 25 sprays of Hercules: 1st, \$10.00; 2d, \$7.50; 3d, \$5.00.

B. 10. (For Ladies Only) Mt. Desert Nurseries. Table decoration: 1st, \$10.00; 2d, \$7.50; 3d, \$5.00.

B. 11. Sutton Silver Cup, value \$25.00. For best table of sweet peas, covering 12 square feet.

Section C is for amateurs and children.

Section C—Is for Amateurs and Children.

Section D—Open and Miscellaneous.

Class D. 1. Morse Silver Cup, value \$25.00. For the finest and most meritorious display (open to the seed trade only).

D. 2. Rice Seed Co. Prizes. For 1916 Novelty, 20 sprays, 1 variety: 1st, \$5.00; 2d, \$3.00; 3d, \$2.00.

D. 3. Lord & Burnham Prize. (Florist growers only). A gold watch for the best display, arrangement to count.

D. 4. American Sweet Pea Society's Silver Medal will be awarded for the best collection of Novelties which did not appear before 1915.

D. 5. American Sweet Pea Society's Silver Medal for collection of Novelties appearing in 1916 catalogues only. Bronze Medal will be awarded for the second best collection.

D. 6. For sweet peas not yet in commerce the American Sweet Pea Society's medals and certificates will be awarded in this class.

D. 7. S. A. F. & O. H. Silver and Bronze medals will also be awarded in this class.

Section E.

(Classes 1 to 21 Open to All.)

Class E. 1. Mrs. Alfred Anson. For tub of any white, cream or cream-yellow variety: 1st, \$5.00; 2d, \$6.00; 3d, \$4.00.

E. 2. Mrs. A. Howard Hinkle. For tub of any scarlet, crimson, rose or carmine variety: 1st, \$8.00; 2d, \$6.00; 3d, \$4.00.

E. 3. Mrs. Andrew Carnegie. For tub of any lavender, mauve, purple or blue variety: 1st, \$8.00; 2d, \$6.00; 3d, \$4.00.

E. 4. Thomas J. Grey & Co. For tub of any pink, orange or salmon variety: 1st, \$8.00; 2d, \$6.00; 3d, \$4.00.

E. 5. Town of Eden. For display arranged against a wall, on a table 3x10 ft.: 1st, Silver Cup; 2d, \$15.00; 3d, \$10.00.

Spencer Varieties.

1st, \$5.00; 2d, \$3.00; 3d, \$2.00, are offered in each of the following classes, 20 sprays in each:

E. 6. Fottler, Fiske, Rawson Co. 20 sprays, any white.

E. 7. Northeast Harbor Nurseries, any crimson or scarlet.

E. 8. New York Florists' Club, any rose or carmine.

E. 9. New York Florists' Club, any light pink.

E. 10. New York Florists' Club and Gardeners' and Florists' Club of Boston, any deep pink.

E. 11. Gardeners' and Florists' Club of Boston, any blue.

E. 12. Gardeners' and Florists' Club of Boston, any mauve.

E. 13 to E. 21, cream or orange-yellow; salmon or orange; lavender; maroon or purple; picotee-edged; striped or flaked red or rose; striped or flaked blue or purple; bicolor other than picotee edged; any other color.

Special Prize by Mt. Desert Nurseries for best single vase exhibited in classes E. 6 to E. 21, \$10.00.

The Garden Magazine Achievement Medal will be awarded to the exhibitor taking the most first prizes in E. 6 to E. 21.

Schedule in full with rules, etc., may be obtained from Harry A. Bunyard, Secretary, 40 West 28th St., New York City.

Exhibition Committee: Geo. W. Kerr, chairman; Wm. H. Duckham, J. Harrison Dick, A. N. Kirby, W. A. Sperling.

Judges for the Exhibition: Prof. A. C. Beal, chairman, Ithaca, N. Y.; William H. Duckham, Madison, N. J.; W. N. Craig, Brookline, Mass.; Chas. H. Totty, Madison, N. J.; Julius Chevalley, Blue Point, L. I.; Geo. W. Kerr, Doylestown, Pa.; J. Harrison Dick, New York; Wm. Kleinheinz, Ogontz, Pa.; Arthur Herrington, Madison, N. J.; Geo. Wyness, Prides Crossing Mass.; George Critchley, Lawrence, L. I.; John Everitt, Glen Cove, L. I.; A. Bauer, Deal Beach, N. J.; William Sim, Cliftondale, Mass.; Frank H. Traendly, New York City; Geo. T. Schuneman, Rockville Center, L. I.; Geo. Thompson, Lenox, Mass.; Thomas Murray, Tuxedo, N. Y.; Fred Heeremans, Lenox, Mass.; Leonard Barron, Garden City, L. I.; J. Tansy, Tuxedo, N. Y.; A. N. Kinney, New York City; E. Barth, Tuxedo, N. Y.; D. McGregor, Tuxedo, N. Y.; Howard Nicols, Yonkers, N. Y.; Arthur Golding, Tarrytown, N. Y.

A GREAT EXHIBITION AND SPLENDID OUTING COMBINED

The prospect for the Sweet Pea Exhibition at Bar Harbor in connection with our annual convention July 15th and 16th shows great promise. There will be many exhibits from Newport, Lenox and other eastern points. Bar Harbor itself is an ideal place for growing sweet peas. Schedule is now on hand and can be had on application to the secretary. About one thousand have already been sent out to possible exhibitors. The prize list is very large and generous and keen competition is expected.

Visitors, exhibitors and judges going from New York will leave on the Metropolitan Line to Boston at 5 P. M. Thursday, July 13th, reaching Boston the next morning. They will leave in the afternoon with the Boston contingent on the Eastern Steamship Line to Bar Harbor, Friday, P. M., July 14th. The fare between Boston and Bar Harbor is \$10.50 a round trip, staterooms \$1.50 and \$2.00. Fare, New York to Boston is \$8.00 return, staterooms \$1.00 and \$2.00, according to location. Through tickets to Bar Harbor can be procured at either point. Early reservations are requested as traveling at this season of the year is very heavy.

For further particulars, write to the secretary,

HARRY A. BUNYARD,
40 West 28th St., New York, N. Y.

BOSTON SWEET PEA EXHIBITION.

The annual exhibition of sweet peas by the Massachusetts Horticultural Society will be held at Horticultural Hall, Saturday and Sunday, July 8 and 9. In addition to the usual classes open to all growers there are eighteen prizes offered for exhibits by amateurs. There will be also exhibits of other seasonable flowers both cultivated and wild and the displays of fruits are now becoming prominent. The exhibition is free and will be open Saturday from 12 to 6 and Sunday from 1 to 6 o'clock.

WM. P. RICH, Sec'y.

THE EXHIBITIONS

ROSE AND STRAWBERRY SHOW AT BOSTON.

The annual rose and strawberry exhibition of the Massachusetts Horticultural Society held at Horticultural Hall on Saturday and Sunday, July 1 and 2, was a spectacle of rare effectiveness and brilliancy. Not only were the roses and strawberries shown in fine array but there were wide expanses of glowing collections of summer bloom, campanulas in many species, English irises, sweet williams, foxgloves, peonies, lychnis, delphiniums. The largest group, and one of the best arranged ever shown by the exhibitor, was by R. & J. Farquhar & Co. It was an imposing symphony in blue and white, in which myriads of campanulas and larkspurs played the leading part. Blue Hills Nurseries and Eastern Nurseries were also represented by large collections of hardy perennial flowers and superb peonies were staged in quantity by A. H. Fewkes and T. C. Thurlow's Sons.

Among the roses, Silver Moon, shown in enormous trusses of flowers and buds, with foliage simply wonderful, by A. J. Fish, of New Bedford, was the crowning attraction. Dealers in this variety may expect plenty of calls for it from this part of the country now.

For the first time here the strawberries were shown on flat platters, arranged with their own foliage, instead of in baskets and it was generally commented upon as a decided improvement, permitting inspection of each individual berry. The premier prize for collection of ten plates of 48 berries each was won by Wilfrid Wheeler. Other prize winners were G. V. Fletcher, Louis Graton, W. C. Cooper, W. C. Winter and E. M. Brewer.

The list of plant and flower awards follows:

Hardy roses collection: 1st, Thomas N. Cook; 2d, W. C. Winter. Best three blooms any white H. P.: 1st, David Tyndall; 2d, Robert Seaver. Three pink H. P.: 1st, David Tyndall; 2d, E. K. Butler. Three red H. P.: 1st and 2d, David Tyndall. Basket of H. P. roses, artistically arranged: 1st and 2d, Robert Seaver. Twenty-four H. P., one of each: Thomas N. Cook. Twelve do.: 1st, A. W. Preston; 2d, John B. Wills. Six do.: 1st, Robert Seaver; 2d, A. W. Preston. Hybrid Tea roses, Twelve H. T., one bloom each: 1st, A. W. Preston; 2d, E. K. Butler. Three H. T., variety introduced since 1913: A. W. Preston with Crissie McKellar. Six any white H. T.: 1st, Thomas N. Cook, Killarney; 2d, G. E. Barnard, Kaiserin Augusta, Victoria. Six any yellow: 1st, A. W. Preston, Mme. Melanie Soupert; 2d, G. E. Barnard, Mrs. A. Ward. Six any pink: 1st, A. W. Preston, Duke of Westminster; 2d, A. W. Preston, Mme. Euler. Six any red: 1st, A. W. Preston, George Dickson; 2d, Thomas N. Cook, George Dickson. Basket, artistically arranged: Mrs. Albert Geiger, Jr. Sweet williams: 1st, Mrs. J. L. Gardner; 2d, Mrs. C. G. Weld. Hardy herbaceous flowers (twenty-five vases): Weld Garden. Display of hardy herbaceous flowers: 1st, Blue Hill Nurseries. Campanula Medium: 1st, Weld Garden; 2d, Mrs. C. G. Weld.

Silver Medal: A. J. Fish, collection of climbing hardy roses.

First Class Certificate of Merit: Weld Garden, Coelogyne Mooreana.

Honorable Mention: Thomas N. Cook, seedling rambler rose No. 1; H. F. Chase, Andover, seedling peony Miriam, semi-double, rich pink with bright yellow stamens.

Gratuities: Thomas N. Cook, collection

COMING EXHIBITIONS.

July 14-15, Bar Harbor, Me.—Annual Show of American Sweet Pea Society.

July 20, Worcester, Mass.—Sweet Pea Exhibition, Worcester Horticultural Society.

August 24-25.—Lewiston, (Me.) Annual Flower Show, Gardeners' Union, Lewiston City Hall.

July 26-27, Southampton, N. Y.—Tenth Annual Flower Show, Southampton Horticultural Society.

August 3, Oyster Bay, L. I., N. Y.—Dahlia Show, Oyster Bay Horticultural Society.

August 11-12-13, Boston.—American Gladiolus Exhibition, Horticultural Hall.

August 24, Worcester, Mass. Gladiolus Exhibition.

Sept. 2-9, Cleveland, Ohio.—Industrial Exhibition and Fair.

Syracuse, N. Y., Sept. 11-16.—New York State Fair.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

of roses; Mrs. C. G. Weld, display of roses; Miss Cornelia Warren, display of roses; Eastern Nurseries, collection of climbing roses; J. T. Butterworth, hybrid perpetual roses; T. C. Thurlow's Sons Co., peonies; A. H. Fewkes, peonies; Weld Garden, digitalis; Miss Cornelia Warren, Campanula persicifolia and gloxinias; F. W. Fletcher, Delphinium Clevedon Beauty; E. B. Dane, orchid blooms; J. T. Butterworth, orchid plants; Miss Cornelia Warren, oncidiums; R. & J. Farquhar & Co., group of hardy plants and flowers; Eastern Nurseries, herbaceous flowers; Mrs. E. S. Martin, cut flowers.

NEWPORT SUMMER SHOW.

The annual June flower show of the Newport Garden Association and the Newport Horticultural Society was held on June 28 and 29 at the Association grounds on Gibbs avenue with 83 prize classes by the former organization and 50 by the latter. The show was an open air exhibit, with the cut flowers displayed in three large tents. One of the important contests was for the best novelty sweet pea for 1916, for which Mrs. W. B. Leeds took 1st prize. Mrs. French Vanderbilt 2nd and the Reef Gardens 3rd. In the only exhibit for which a medal was offered, a group of plants, the award went to Mrs. Hugh D. Auchincloss. Money and cups were the other prizes.

Trade displays were conspicuously absent. One of the most effective exhibits, not in competition, was that of Kempenaar & Christensen, local gardeners, showing standard baby rambler roses set in an artistic grouping of begonias, spireas, etc. On the grounds between the tents was a group of dwarf Japanese maples, firs and shrubs exhibited by the Wilson Nurseries.

The judges from the Garden Association were Richard Gardner, William MacKay and James Robertson and from the Horticultural Society Arthur T. Bunyard, Joseph Dixon and Alan R. Wheeler. The show was free and a throng of visitors came. The

campanulas, foxgloves, roses, etc., in the plant classes were generally shown in outdoor beds and it is proposed that these shall be left intact for the rest of the season as a public attraction.

Following is a condensed list of prizes and gratuities awarded.

Victor May, gard. at "The Reefs," Roses, Adiantum Farleyense, Gerbera Jamesoni, hardy perennials, grapes, strawberries, vegetables, melons; fifteen prizes. Andrew Dorward, gard. to Mrs. T. J. Emery, new roses, sweet peas, hardy perennials, lilies, sweet williams, grapes; twelve prizes. Daniel Hay, gard. to Mrs. French Vanderbilt, orchids, canterbury bells, sweet williams, bulbous plants, salpiglossis, foxgloves, iris, new sweet peas, strawberries, vegetables, ivy geranium and table center piece; twelve prizes. James Bond, gard. to Mrs. H. Mortimer Brooks, annuals, sweet williams, stocks, salpiglossis, foxgloves, irises, palms and foliage plants; ten prizes. John Mahan, gard. to Mrs. H. G. Auchincloss, canterbury bells, sweet william, antirrhinum, foxgloves, hardy perennials, nectarines, strawberries, vegetables, water lilies; ten prizes. Andrew Ramsay, gard. to Mrs. W. Watts Sherman, violas, pansies, petunias, roses, table center piece; seven prizes. Colin Robertson, gard. to R. W. Goelet, roses and vegetables; seven prizes. James Boyd, gard. to Vincent Astor, calceolarias, foliage plants and ferns; six prizes. James Watt, gard. to Mrs. W. G. Weld, roses, sweet peas, tuberous begonias, gloxinias; four prizes. H. S. Meikle, gard. to Rev. Roderick Terry, foliage plants, fuchsias; four prizes. James Robertson, gard. to Mrs. T. O. Richardson, palms, ferns, aspidistra; four prizes. D. F. Roy, gard. to H. E. Converse, Marion, Mass., roses, strawberries; four prizes. C. M. Brigholt, gard. to Miss Fanny Foster, roses; four prizes. William Gray, gard. to Mrs. W. B. Leeds, roses, sweet peas, center piece; four prizes. Sven Johnson, gard. to Miss Edith Wetmore, rose basket, tub sweet peas, canterbury bells; three prizes. J. B. Urquhart, gard. to Gov. Beeckman, Adiantum Farleyense, roses; three prizes. Arthur Leary, gard. to John Nicholas Brown, roses and basket of flowers; two prizes. Mrs. A. J. Fish, roses. Hugh Williamson, gard. to Wm. Waldorf Astor, roses. John Baumgartner, gard. to D. B. Fearing, strawberries. John Mackay, gard. to Henry A. C. Taylor, calceolarias. William Allen, gard. to Mrs. Alex. H. Rice, lilies. Jas. Hooper, gard. to Mrs. T. K. Gibbs, roses. Jas. Watson, gard. to Wm. Grosvenor, peonies. John H. Greatorex, gard. to Com. A. C. James, roses and orchids.

JUNE FLOWER SHOW AT HARTFORD, CONN.

The second June Flower Show of the Connecticut Horticultural Society was held in Hartford on June 27th and 28th.

In the centre of the hall was an unusually fine oval bed arranged by Alex. Cumming, Jr., superintendent of the rose department of Cromwell Gardens. J. F. Huss decorated the stage and carried off the silver cup for the best general collection. Warren S. Mason out of nineteen classes of roses successfully competed in sixteen. He also won many prizes in the hardy perennials. The Conn. Hospital for the Insane, Middletown, gard. Edward Eggert, was also a large prize winner. Prof. M. W. Jacobus, gard. Alfred Cebelius, with peonies, N. Nelson, gardener at the Hartford Retreat, with sweet peas, J. Vidbourne with peonies, and W. W. Hunt & Co., with perennials were also prominent in the list of winners.

CLUBS AND SOCIETIES

LENOX HORTICULTURAL SOCIETY

The annual summer exhibition of this society was held in Lenox, Mass., Town Hall on June 28 and 29. It attracted many visitors, including members of the Garden Club of America which was holding a convention in Lenox at the same time.

The arrangement committee, Harry Heeremans, Lewis Barnett and Gordon McMillan, assisted by members of the society, showed marked taste in locating and arranging the exhibits. The judges, Walter Jack of Natick, Thomas Reynolds of Princeton, N. J., and Robert Scott of Pittsfield, had a difficult task in judging the exhibits, but the result of their work gave general satisfaction. The display was a splendid one and all classes were well filled despite the exceedingly poor season. Of outdoor blooms, peonies and perennials were prominent. The sweet peas, while not shown in the quantities of previous years were of unusually fine quality. Arthur N. Cooley of Pittsfield won the silver loving cup, given by Knight & Struck for the best collection of 10 varieties of sweet peas, 25 sprays to each. He also won the silver dish presented by Joseph Breck & Sons of Boston for 12 vases of sweet peas. A certificate of merit and a silver medal were also given Mr. Cooley by the Lenox Horticultural Society for his wonderful group of rare orchids entered for display only.

Most of the famous estates in Lenox, Dalton, Pittsfield, Lee, Stockbridge and other neighboring towns were represented by exhibits, some of them by very extensive displays. Among the leading winners were Giraud Foster, Miss Kneeland, W. E. Griswold, Mrs. J. E. Parsons, W. M. Salisbury, A. R. Shattuck, C. de Heredia, Joseph H. Choate, F. E. Lewis of Ridgefield, Conn., W. E. Hoyt, Mrs. W. D. Sloane, H. M. Sage, of Albany, N. Y., Charles Lanier. The arrangement of palms ferns and pink and white clarkia on the stage, from Elm Court greenhouses, was admirable.

ILLINOIS STATE FLORISTS' ASSOCIATION.

At a meeting held at Bloomington, Illinois, of the Executive Committee of the Illinois State Florists' Association, on Tuesday, June 27th, it was decided not to put on a competitive flower show at the State meeting there this fall, so the getting up of a premium list was abandoned.

All efforts will be made by the committee to put on one of the largest non-competitive fall exhibitions ever held. The secretary was instructed to write all those members who answered the call for cash subscriptions, towards getting up a premium list and thank them for their liberal response. All, however, will be asked to contribute flowers or plants towards making this a banner show. The only cash awards will be those given to the school children of Bloomington for the best chrysanthemum plants grown by them. This amateur feature will be entirely in charge of A. Washburn & Sons, of Bloomington, who donated several

thousand plants for the children to grow, and have offered \$50.00 in prizes to this cause.

The show will be held in the large Coliseum at Bloomington on Nov. 9th, 10th, and 11th, and the commercial part will be in charge of a committee consisting of J. F. Ammann, Chas. Loveridge and Geo. W. Jacobs. The usual certificate of merit will be awarded to anything new or meritorious. No entries need be made for this.

Those attending the meeting were President Chas. W. Johnson, Charles Loveridge, I. L. Pillsbury, E. W. Guy, Geo. W. Jacobs, and J. F. Ammann from out of town, Frank and George Washburn and John R. Gee from Bloomington, Ill.

J. F. AMMANN, Sec'y.

PRESIDENT ELECT AMERICAN ASSOCIATION OF NURSERYMEN.

JOHN WATSON.

In electing John Watson as its chief officer for the coming year the American Association of Nurserymen has secured a man of high executive ability whose incumbency means a year of progressive activity and usefulness. Mr. Watson has been a zealous worker in the organization for many years. He recently withdrew from active participation in the business of Jackson & Perkins Co. with which he had been for ten years connected and started in the nursery business on his own account in Newark, N. Y., but still retaining his financial interest in the old company. He was elected vice-president of the American Association of Nurserymen at its convention in 1915, is an officer in the Nurserymen's Protective Association and also the Wholesale Ornamental Growers, and holds memberships in the S. A. F., the Rochester Florists' Club and the Western Association of Nurserymen.

Personally Mr. Watson has all the characteristics which make a man a favorite among his fellows and wherever he is known he has staunch friends a-plenty.

THE CONVENTION CITY.

Houston Has 17 Railroads and is from 400 to 1,000 Miles from the Border.

We have had a number of inquiries regarding the border situation of Texas. In the first place, I want to state that Houston is from 400 to 1,000 miles from the border. We hear less about the border troubles here than they do in the North and East, so dismiss from your minds that you are to be anywhere near the troubled territory. While the railroads are very busy at this time transporting troops, passenger traffic is not hampered, and by convention time all troops will be on the border. Houston with her 17 railroads is equal to any emergency. The delegates in coming to Houston will not be affected by the movement of troops.

We are very much elated over the prospect of a very large attendance. The South is going to turn out in full force. President MacRorie advises me that he will have two Pullman cars full from California. Secretary Young says we will have a good delegation from the East. I understand the Central states will send a large delegation.

With our Convention Garden a success and our trade exhibits reservations pouring in, prospects are bright for a large attendance. Watch for the entertainment program that we have lined up for you. You have every assurance of a grand old time in Houston this summer.

R. C. KERR.

GOING TO THE CONVENTION.

E. C. Pruner, known all through the West, has just returned to Chicago from a trip in the interests of the florists' supply houses. If anyone lacks enthusiasm for the Houston convention, a half hour's talk with Mr. Pruner would make him ready to pack his grip. It seems the nights are always cool and the days—well, we all growled over the cold summer last year. Mr. Pruner advises buying a ticket to St. Louis, and after a stop there, using one of the several lines according to preference the rest of the way. The Santa Fe passes through Oklahoma where the Osage Mts. may be seen. Another line goes through the Ozark Mts. and the one who wants sight seeing as well as convention should stop over on the way. At Houston Jim Pruner says they are making great plans for entertaining their guests and that the Southern city is no longer inland, for a deep waterway allows the ocean boats to come up to the city.

DURING RECESS.

Holton & Hunkel Employees.

Holton & Hunkel gave an outing at Brown Deer, Wis., on Sunday, June 25, to their employees and families. There was a big crowd and plenty of entertainment and hospitality, altogether a memorable day for enjoyment. There were a number of games and appropriate prizes were awarded.

Obituary

Walter P. Stokes

The sad news has been received of the death of Walter P. Stokes on July 1st at Moosehead Lake, Maine, where he had gone on a vacation about three weeks ago. Mr. Stokes was well known in the horticultural world having been a partner in the firm of Johnson & Stokes, established in Philadelphia about 1886. They conducted a general seed and implement business and achieved great success and distinction, their business growing to large proportions and their trade extending to every state in the union and even beyond. About ten years ago some family differences caused a dissolution of the partnership since

WALTER P. STOKES.

which Mr. Stokes conducted a separate establishment at 217 Market street with greenhouses and nurseries at Moorestown, N. J., which still continue active in all departments under corporate management.

Mr. Stokes was 65 years of age and was a native of Rahway, N. J. He was educated at the Friends Academy at West Town, Pa., and started his business career in Philadelphia with the wholesale grocery firm of Caleb Wood on South 2nd street. This firm sold timothy, clover and other seeds to its country customers and from 1874 to 1886 they bought their supplies of seeds from C. B. Rogers, 133 Market street. That firm went out of existence about 1886 but that was where Herbert Johnson was employed and that was where Mr. Stokes got acquainted with him and the seed partnership resulted.

Public recognition of the high esteem in which Mr. Stokes was held

came in many ways. He was an ex-president of the American Seed Trade Association and for fifteen years was secretary and treasurer of the Wabash Mills Company, Manayunk. He was an active member of the Society of Friends and prominent in many charitable institutions.

Philadelphia has long been known as one of the big seed centers of the country. The grim reaper has certainly been cutting a wide swath recently. During the last few years we have lost a Buist, a Maule, a Burpee, and others of less renown, and now a Stokes! But we can say of all of them that, although cut off from us in the heyday of their powers they all did splendid work for the advancement of their fellowmen in their chosen profession and all have passed to the great beyond with unblemished reputations and worthy of our esteem and admiration as long as memory lasts. Not the least of them was the subject of this short sketch, Walter P. Stokes. The writer knew him personally and intimately for twenty-eight years, and he never knew a finer gentleman in all his incomings or outgoings.

GEORGE C. WATSON.

E. J. Harmon.

Edward J. Harmon, who has conducted a successful florist business on Congress street, Portland, Me., for many years, died suddenly at his home, 428 St. John street, on Tuesday evening, July 4th. Heart failure was assigned as the direct cause of his death, as he had appeared in comparatively good health during the day, having witnessed the parade in the morning and in company with Mrs. Harmon attended the theater later in the day. They returned home about 8, and as they entered the house Mrs. Harmon saw her husband stagger and she rushed forward to catch him. Dr. Geer was at once called, but Mr. Harmon passed away before the physician arrived.

Mr. Harmon was born 65 years ago in the Libbytown section of Portland, and had resided for a time in South Portland. He first took up taxidermy, but later entered the florist business. He was a man of amiable temperament and companionable disposition. Fishing was his favorite pastime and he had at Lake Sebago a commodious summer cottage where he enjoyed having the company of his congenial friends. He is survived by his wife, Elizabeth, and four sons, Edward, Chester and William of Portland and Henry of Waterville; one daughter, Mrs. Margaret Lewis of Harris street, Portland.

Thomas Wilson.

Thomas Wilson, formerly a florist in Newburyport, Mass., died at Davis, Cal., on June 26, aged 68 years. Mr. Wilson went West about 35 years ago and settled at Grass Valley, Cal., where he made a reputation as a florist, and was

appointed superintendent of the grounds connected with state agricultural school at Davisville, where he remained until failing health made it necessary for him to take up a less exacting position.

Sara Mills.

Miss Sara Mills, sister of C. D. Mills, of Jacksonville, Fla., passed away on Thursday of last week from complications following an operation performed at Garfield Hospital in Washington, D. C. Mr. Mills, who was in Washington during her illness, accompanied the body to Pittsfield, Mass., for burial.

Mrs. Wm. H. Hall.

Mrs. Elmaetta Hall, widow of William H. Hall, a florist of Brooklyn, died on Monday, June 26, at her home, 28 Stewart street, Brooklyn, in her sixty-ninth year. She was born in Barkhamsted, Conn. After the death of her husband thirteen years ago, Mrs. Hall ran the business herself. She left a daughter.

JAMES KIDD.

of Inverurie, Aberdeenshire, Scotland.
Killed in France, Dec. 23, 1915.

A nephew of Horticulture's Philadelphia representative, George C. Watson.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Registry.

Public notice is hereby given that John Dunbar, of Rochester, N. Y., offers for registration the new *Salvia splendens* Elizabeth Dunbar, described below. Any person objecting to the registration, or to the use of the proposed name, is requested to communicate with the secretary at once. Failing to receive objection to the registration, the same will be made three weeks from this notice.

Description: "Chance seedling. Calyx cream white, corolla pure white. Flower-spikes seven to ten inches long. Habit compact. Height when grown in groups, from base to top of flower spikes, twenty-four to twenty-six inches. Flowers continuously throughout the season. Comes true to seed."

JOHN YOUNG, Sec'y.

June 30, 1916.

SEED TRADE

AMERICAN SEED TRADE ASSOCIATION

Officers—President, Kirby B. White, Detroit Mich.; First Vice-President, F. W. Bolgiano, Washington, D. C.; Second Vice-President, L. L. Olds, Madison, Wis.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending June 23, were recorded as follows:

Bulbs—England, \$64.
Plants—Belgium, \$2,680; France, \$10; England, \$215; Bermuda, \$46; Mexico, \$45; Cuba, \$65; British India, \$108; Japan, \$77; Venezuela, \$1,217; Costa Rica, \$35.

Red clover seed—France, \$29,278.

Clover seed—France, \$7,458; Netherlands, \$12,000; Canada, \$182.

Other seed—Denmark, \$4,049; France, \$1,649; Italy, \$646; Switzerland, \$176; England, \$9,205; Argentine, \$2,754; British Indies, \$26,332; British East Indies, \$834; Morocco, \$2,244; Mexico, \$2,577; Hongkong, \$62; Japan, \$3.

Carbonate of potash—Netherlands, \$17,535.

Nitrate of soda—Chile, \$545,730.

Guano—England, \$150.

MINNESOTA HORTICULTURAL SOCIETY.

On June 23 the annual meeting of the Minnesota Horticultural Society was held in the large new gymnasium of the Agricultural College, midway between the "Twin Cities." Peonies and strawberries were the chief attraction.

The superintendent of the State Experiment farm raised sixty thousand seedling strawberries. These were reduced to two hundred and then narrowed down to three. No. 3 was a marvel. Fruit as large as crabapples; enormously prolific; good shippers and of excellent quality. Fall berries that were allowed to bear in the spring showed splendid fruit of great size and excellence.

The peony show surpassed anything I ever saw—though I have attended the shows of the national society in Chicago and Boston. The soil and climate of Minnesota are remarkably adapted to this glorious flower. We import peonies from France of great beauty and do not know that up here in Minnesota we have those who originate peonies equal to those produced by the best propagators of Europe. For sixteen years the Brands of Fairbault, Minn., have carried on their great work, and their exhibit was a marvel. They have originated six reds of fine form, rich color and large size. Mary Brand is probably the best red peony on earth. It is of exactly the same color as the famous Karl Rosenfield, but is much larger.

The Brands have gone in on a large scale. They do not find one in a thousand worthy of a name and sometimes it will be but one in 5,000. The rest are discarded, so to compensate for the great expense they sell their new creations at \$5 to \$15 a root. Their productions have been but little known in the East, but as growers are becoming acquainted with them the demand is increasing.

A New Peony Society.

A call has been issued for a meeting for organizing a northwest peony society, to meet at the Great West Hotel at Minneapolis on June 28. Why should there be another society when we already have a national society? 1st, because the present society is national only in name. In the neighborhood of the Twin Cities there are fine peony gardens and an immense number of flowers are raised. Many persons of means have spared

KIRBY B. WHITE.

President-elect American Seed Trade Association.

no expense to secure the best the world affords. The great shows of Boston cannot produce as fine flowers as grow here. Again they are on the verge of a vast empire where these hardy flowers can glorify the desolations of the great bleak prairies. Repeated and urgent efforts have been put forth to draw the national society up here, but all to no avail, though the attendance and the enthusiasm would surpass that of any other location.

Yesterday at the peony show here about 1000 people gathered, while at Chicago there was hardly 100. Some western people belong to the national society and complain that their money goes east to pay premiums to eastern growers so they get no good of it.

Again the time of ripening does

not allow the Minnesota growers to compete with Boston, and those grown there are often nearly a month ahead of the north, so, as it is nearing the Fourth the northwest declares independence. It is designed to push a vigorous campaign of publicity into the Canadian provinces and perhaps have a meeting at Winnipeg, as peonies do remarkably well in those Canadian provinces.

C. S. HARRISON.

York, Nebr.

NEW HAVEN PARK NOTES.

Two vigorous growing briar roses attract attention in West Rock Park by their size and floriferousness—Regine Badet and Abel Cain. The latter is deep crimson and the first named is deep pink, very double and deliciously scented. Both form impenetrable thickets and grow to a height of six or eight feet with spread of equal dimensions. Superintendent Amrhyh has about completed the filling in of the new Beaver Hill district and is now building roads and doing other substantial development work which will so improve the neighborhood as to add much taxable high-class property. Trees throughout the park reservations are in splendid shape this season. The city nursery is now well stocked with vigorous young trees for street planting. The rose garden has attracted thousands of visitors and New Haven's unique park system was never so efficiently managed and attractive as it is today. Mr. Amrhyh has finally settled satisfactorily with the N. Y., N. H. & H. R. R. for the injuries he received in the Milford accident.

ROSE GARDEN INSPECTION.

The inspection of the rose test garden at Ithaca, N. Y., brought out a gratifying attendance of members of the Syracuse Rose Society and American Rose Society. The affair was under the direction of Prof. A. C. Beal. Addresses were made by S. S. Pennock, president of the American Rose Society, Robert Pyle, Dr. E. M. Mills and others. The American Rose Society held a session in Prof. E. A. White's office. J. E. Curry was appointed chairman of a committee to establish a municipal rose garden in Portland, Oregon. Others present were F. L. Mulford, Washington; H. H. Hoffman, Elmira; Benj. Hammond, Beacon; Jos. Heacock, Wyncote, Pa.; H. G. Bahret, Poughkeepsie; Dr. B. T. Galloway, David Lumsden and others connected with the college.

At the annual meeting of the Garden Club of America in Lenox, Mass., on June 30, there were discussions on the preservation of wild flowers, country roadside planting and extermination of poison ivy. The club chose Lake Forest, Ill., for the meeting in 1917. It was also voted to hold the convention of 1918 in Southampton, L. I., and that of 1919 in Cincinnati. The club elected as president Mrs. J. Willis Martin of Chestnut Hill, Phila.; vice-presidents, Mrs. Archibald D. Russell, Princeton, N. J.; Mrs. Benjamin T. Fairchild, New Milford, N. Y.; Mrs. John Newlands, Cleveland, Ohio; Mrs. Francis King, Alma, Mich.; Secretary, Mrs. Bayard Henry, Germantown, Phila.; treasurer, Mrs. Hugh D. Auchincloss, New York.

"Seeds with a Lineage" All Varieties

Thoroughly tested at our trial grounds, Raynes Park, London, England. Send for Catalogue

CARTERS TESTED SEEDS, Inc., 166 Chamber of Commerce Bldg., Boston, Mass.

SPECIAL OFFER TO THE TRADE ONLY OF GERMAN IRISES

in the following choice named varieties:

ASIATICUS. S. violet-blue; F. deep purple-blue.

BOCCAGE. S. soft lavender; F. maroon and veined maroon on a white ground.

BRONZE BEAUTY. S. sulphury-bronze; F. claret shading to light lavender, orange beard.

COMTE DE ST. CLAIR. S. pale blue; F. deep violet, striped and margined white.

EDITH. S. porcelain-blue; F. veined dark blue on a white ground;

ELIZABETH. S. pale blue, passing to grey; F. soft lilac-blue.

FLORENTINA PURPUREA. S. violet; F. purple.

FLORENTINA ALBA. (Queen Emma.) S. and F. soft shade of grey.

GARRICK. S. pale lavender; F. deep lavender.

GRACCHUS. S. pure yellow; F. crimson reticulated white.

HONORABLE. S. golden yellow; F. rich mahogany-brown.

INNOCENZA. S. ivory-white; F. white, striped maroon at base; beard golden.

JOHAN DE WITT. (Spectabilis.) S. light lilac-blue; F. purple.

KING EDWARD VII. (Plumeri.) S. soft rosy-lilac; F. crimson.

MADAME CHEREAU. S. and F. white, frilled azure blue.

MISS MAGGIE. (Hermoine.) S. silvery-lavender; F. suffused soft rose.

MORPHEUS. S. French grey; F. reticulated royal purple on a white ground.

MRS. H. DARWIN. S. pure white; F. white, reticulated violet at base.

PANCHREA. S. bronze; F. white, striped crimson.

PRESIDENT CARNOT. S. light blue; F. deep violet.

SAMBUCINA BEETHOVEN. S. rosy-lilac; F. purple with orange crest.

SPARTA. S. bronze-yellow; F. maroon margined old gold.

VAN GEERTII. S. bronze shaded lavender; F. very dark purple, veined white.

In the descriptions (S) is used to signify standards; (F) falls.

Prices of all the above varieties \$6.00 per 100; \$50.00 per 1000. September Delivery. **PALLIDA DALMATICA**—the finest pale blue Iris of the Germanica group. Price, \$12.00 per 100; \$100.00 per 1000. September delivery.

NEWS ITEMS FROM EVERYWHERE

CHICAGO.

M. C. Gunterberg has gone on a four days' northern boat trip.

Miss Paradise, of A. L. Vaughan & Co.'s, is spending her vacation in Denver, Colo.

The family of W. H. Kidwell is now installed in their summer home at Eagle Lake, Mich.

Miss Florence Scriven, of the Chicago Flower Growers' Association, is taking a two weeks' vacation.

The wholesale houses are all displaying signs, showing the scheduled time for closing to be 5 o'clock.

The American Seed Trade Association passed resolutions declaring Chicago to be an ideal convention city.

Mrs. Gulbrauson, of River Falls, Minn., is in Chicago and would like to stay for some time if she can secure a position here.

Fred Hoekstra, with Fruyling & Mendel, Grand Rapids, Mich., is visiting his brother-in-law, John Riemersma, a florist at 71st and Indiana avenue.

A County Fair, which includes a large floral section, will be held in Lake Forest, July 14 to 16. The flower poster is the work of Mrs. McGann and Miss Isabella Holt.

Chas. Macauley, treasurer of the Chicago Flower Growers' Association, is anxious to be rid of that honorary position, and at the annual meeting this week will try to shift the glory to some other member.

On June 29, John Canger and Miss Diamesis were married at the home

of the bride, 4448 Racine avenue. Mr. Canger was formerly a member of the firm of Canger & Gormley and has in recent years been with John Mangel, the Palmer House florist.

The closing up of the books for the year is now under way in most of the wholesale houses, July 1 being a sort of business New Year's day. Mrs. Phil Schupp returned from their cottage at William's Bay to assist in the annual event at J. A. Budlong's.

William Allen has resigned his position as gardener for J. A. Tilt, of Chicago, and has followed his family East for a visit before taking another engagement. Mr. Allen is very successful in his work and was several years in the East before coming to Chicago.

For ten years the families of Gust. Swenson, of Elmhurst, and J. Michaelson, of River Forest, have spent the Fourth of July together at Elmhurst. This year they spent it at River Forest, taking part in the parade which was a part of the celebration there.

Speaking of the abandonment of Asparagus plumosus strings from the list of greenhouse products of Chicago, O. Freese, of Poehlmann Bros., attributes it to the result of a fire ordinance forbidding its use in store decorations, which shut off its greatest avenue of sale. The sprays can be so successfully shipped from the South that greenhouse space can be used to better advantage than in growing them, so both strings and sprays are more seldom found now than formerly.

C. B. Knickman is calling on the trade in the interest of McHutchison & Co. He says the failure of some orders to be filled has been traced to the fact that the boats carrying these orders across the channel from England were destroyed by submarines. Such orders lost were usually late ones. Jas. McHutchison met Mr. Knickman here and they went together to Milwaukee to attend the nurserymen's convention, after which Mr. Knickman returns here and then leaves for California.

WASHINGTON, D. C.

The next regular meeting of the Florists' Club of Washington, D. C., will be held Tuesday evening, July 11. A discussion of plans for the outing to take place the following week will be the principal order of business.

It is rumored that Dr. B. T. Galloway, formerly assistant secretary of the Department of Agriculture, has resigned his position as dean of the agricultural college of Cornell University and will re-enter the Government service when his resignation is accepted. It is believed that Dr. Galloway will engage in special research work in the Bureau of Plant Industry.

The Senate has once more voted to throw out the appropriation in the Agricultural Appropriation Bill providing for the purchase and distribution of Congressional free seeds. It is expected, however, that the Senate will later agree to again making the purchase of these seeds, as it has in previous years, for the reason that the House has already adopted the provision and it will be conceded to when the bargaining starts after the bill goes to conference.

Walter Hawley, of Gude Bros. Company, with Mrs. Hawley, will spend the month of July at his former home in Brooklyn, N. Y. Louis Hohman will use his vacation period in teaching the newly-arrived Louis, Jr., how to say "Papa." Miss Jessie Windsor, also with the same firm, will spend a part of her four weeks' vacation on the Boardwalk at Atlantic City. Mrs. Fred H. Kramer and her daughter, Frieda, is spending the summer in Atlantic City, N. J. Mr. Kramer joins them frequently for week-end stays. Frank Weaver, who is employed by the Leo Niessen Company, will remain at Chesapeake Beach, Va., for two weeks.

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

PITTSBURGH.

A. A. Leach, superintendent of Greenlawn, has just returned from a two weeks' eastern trip.

James Murray McGrew, salesman for G. P. Weaklin & Co., is taking a fortnight's vacation in Cleveland and on his farm nearby.

Edward J. McCallum and Clarence C. Phillips left on last Saturday night for Independence, W. Va., and a fishing trip along the Cheat river.

Wilhom J. Ferguson, who recently opened a retail flower and landscape shop on Penn avenue, is spending a part of his vacation in Cleveland, Ohio.

Miss Eliza McKinley, the head saleswoman for Randolph & McClements, went to Greensburg, Pa. last Monday for a two months' sojourn.

Accompanied by his family, Edward L. McGrath, manager of the Blind Floral Co., will leave on the 16th inst. for North East on Lake Erie, for a two weeks' sojourn.

John R. Bracken, of the Oglesby Paul estate, Phila., formerly an attache of the landscape department of the A. W. Smith Co., has returned east after a several days' visit in McKeesport.

NEW YORK.

A good sized party is assured for the trip to Bar Harbor, Me., on Thursday night, July 13.

There has been another joint committee meeting at the Hotel Manhattan and the prospects are that a mutually satisfactory basis for co-operation in another "International" Flower Show next spring will soon be reached.

Word comes from T. B. DeForest, who, with his bride, is on a honeymoon trip, dated at Panama, saying that they have been through the Canal and have found a wonderful country, flower bedecked everywhere. Quite so.

E. Leuly of West Hoboken, who for many years has made it a practice to

A WELL GROWN GLOXINIA.

Our illustration shows a sturdy specimen of the upright flowered *Gloxinia speciosa* as grown for florist store sales by Sam. Murray of Kansas City. This plant is in a 7-inch pot but Mr. Murray says he usually grows them in 5-in. pots and he has sold 500 of them this spring. Fancy-leaved caladiums, he states have also found a ready and eager market this season. Florists who aim to hold a position in the front rank can do it by adopting Sam. Murray's plan of always having something to offer that "the other fellow hasn't got."

travel to the S. A. F. Convention by bicycle, started on his way to Houston on Thursday of this week, expecting to set there on time unless the Mexicans shoot at him.

The firm of Moore, Hentz & Nash, formerly composed of Frank L. Moore, Henry Hentz, Jr. and Jonathan Nash, was dissolved on May 27th, by the death of Mr. Nash. The assets, liabilities and other affairs of said firm are now in process of liquidation.

Gloxinias are usually grown from the tuberous roots offered by seedsmen but may be raised from seed or by cuttings of shoots or matured leaves. For summer blooming the roots can be started in February and afterwards. Seedlings germinated in February will bloom late in the same year. Gloxinias require a stove temperature but will keep longer if given a lower temperature and more air when they have come into bloom. They do not relish cold water nor too much sun. Do not spray the foliage nor let the plants remain too long in small pots.

BOSTON.

Mrs. E. M. Gill, one of the oldest florists in Massachusetts, observed her 86th birthday anniversary on June 28. She is in rather poor health at the present time.

The gladioli at Cedar Acres, Wenham, Mass., will be shown on Wednesday afternoon, August 9th, from three until seven o'clock for the benefit of the American Ambulance Hospital at Neuilly, France. Tickets, 50 cents.

Flower Market Reports

BOSTON The drowsy lassitude of the "dead of summer" has settled down on the flower markets and stores and we are now in the dullest week of the year. Quantities of flowers far in excess of any possible requirement are received daily and the growers are satisfied to get whatever they can out of the occasional sales. Roses are rapidly growing smaller from day to day. Carnations are a dead weight and a larger part of the receipts are thrown away. Trading is at a standstill in all departments.

The ending of June was **BUFFALO** satisfactory to the merchants. Business throughout the whole month exceeded the year previous. The supply was not heavier but the business was far better, more weddings, also more graduating flowers were used and the stock was fine. Roses, especially white and pink Killarney, together with Ophelia, Sunburst and Maryland were still in their winter form though there was plenty of the mildewed quality and others which showed the effects of the heat. Carnations were also good and there was a fine lot of the late variety of peonies. Beauties were of ordinary quality and the call felt toward the medium grades. Lily of the valley was of course in good demand, but there was enough to go around. Lilies have held out well.

The summer season **CHICAGO** seems to have arrived all at once, for the spring trade has held on well. Stock has kept up in quality, owing to cool weather. Very good carnations are still coming in and it is evident that growers know how to get a longer season than they had a few years ago. Excellent American Beauty roses are seen in all lengths. Now that weddings and commencements are over, lily of the valley has had a chance to catch up and some good stock, larger than a few weeks ago, is seen, but not plentiful enough to lower the price. The call for lilies continues fair. All kinds of roses are in good supply and the buyer who wants good stock can find it and buy to advantage. New ferns from Michigan are selling at \$1.50 per thousand and are of good quality. Smilax strings are longer and heavier than earlier in the season. Cattleya gigas is now coming into bloom in quantity at Poehlmann Bros. They are selling for six dollars per dozen and are of excellent quality.

Business has been **CINCINNATI** very quiet since the first of last week. There is plenty of good stock and prices are rather low. Roses meet with a fair sale. Lilies are in a heavy supply and move very slowly. The carnation cut is decreasing. Gladioli prove good property. Hardy hydrangeas are excellent. Snapdragon meets with a fair demand. The same is true of water lilies. Plenty of larkspur, coreopsis and corn flower.

RUSSELL

One of the very best hot weather roses on the market today. In quantity with us at present.

\$6, \$8, \$10, \$12 and \$15 per doz.

A few extra long "Specials" at \$2.00 per doz.

CATTLEYAS

\$5.00 and \$6.00 per dozen.

NEW YORK We hate to say it but the truth must be observed in these momentous notes—the ashman's chariot is one of the principal consumers of flowers in the wholesale district at present. Roses, lilies—lily of the valley, even—are being shipped in abundantly and a large percentage get no further but here come to an ignoble end, for the summer days are with us, the dullest of the year, and, in short, "there's nothing doing."

Summer conditions are now prevailing with the usual slowing up in receipts and distribution but the past week has been fairly satisfactory all things considered. There was a big hurrah over the ad-men's convention but these men seemed to be here mostly for a good time and there did not appear to be any extra demand for flowers in any direction on their account. Early closing—5 p. m. week days and 1 p. m. Saturdays, is now in order. The vacation season has also started in.

PITTSBURGH With the exception of roses, of which there has been a little overstock, the market demands just about parallel the supply. Pond lilies are coming in from Sandusky, Ohio. There is a perceptible scarcity of lily of the valley. There is also a scarcity of longiflorum lilies for the time being. With the exception of the few changes noted above, the market remains in both quantity, quality and prices about the same as last week.

The wholesale market **ST. LOUIS** conditions for the past week were good as far as supply was concerned, but the retailers did not have any too much business and demand was light. Summer dullness is now on and vacations are in order. Roses and carnations are many more than the demand calls for. Sweet peas are many and exceedingly cheap. Gladioli, too, are coming down in price, while lily of the valley goes up. Lilies are in demand.

Flower Market Reports

(Continued from page 51)

Business last week
WASHINGTON showed a decided falling off. The weather is now of the regular Washington summer variety and all flowers are showing the effects. Roses are very poor and it is a hard matter to get any quantity of good carnations. Lily of the valley has been scarce and many out-of-town orders had to be refused. It will be more plentiful now that the June wedding demand has fallen off. Gladiolus is in fair demand.

PHILADELPHIA.

Samuel S. Pennock has been busy recently moving to his summer home at Westerly, R. I.

John Westcott and immediate members of his family went to Waretown for Fourth of July week according to long established custom.

Ocean City, N. J., claims John Gracey, Charles E. Meehan, Edwin J. Fancourt and a number of other prominent members of the craft.

The regular monthly meeting of the Florists' Club will be held in the Club Room, on Tuesday, July 11th, 1916, at 8 P. M. The proper meeting date is the first Tuesday, but this being July 4th, the officers of the club decided to hold the meeting on the second Tuesday, July 11th. Dr. John Washburn, of the National Farm School, Bucks Co., Pa., will give an illustrated lecture, subject: "How to make good Gardeners. Florists and Farmers out of the submerged population of the great cities of this country."

CINCINNATI.

The Wm. Murphy Co. has begun to ship carnation plants. They are unusually good this year.

C. E. Critchell, Jr., whose adenoids and tonsils were removed last week is recovering nicely from the operation.

Local florists are grieved to hear of the death of George Greensmith, son of Herbert Greensmith of this city, by drowning in the Delaware river, near Riverton, N. J., last Sunday, and sympathize with the bereaved family.

C. E. Critchell has leased quarters in the Swift building on Third street, near Vine, and is having the place remodeled. When completed the store will be one of the most convenient and best arranged in this part of the country. Mr. Critchell will move into the new place about August 1st.

PERSONAL.

Theodore Wirth, of Minneapolis, and J. J. Hess, of Omaha, are enjoying a fishing trip in Wisconsin.

Otto Grade of the Fox Point Floral Co., Milwaukee, Wis., and Miss Elvina Ehlers, were married on June 24.

E. E. Bruggerhof, of J. M. Thorburn & Co., New York, is spending his vacation at his summer place in Randolph, N. H.

T. F. Sheehan, florist, Springfield,

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage as regards prices and quality to place your order with us.

Soliciting your order through this ad cuts down the overhead selling expenses and you positively get lower prices and better quality. Our terms are liberal and are a guarantee that you get a square deal, all bulbs guaranteed true to name or money refunded.

Write us and upon request we will mail you our booklet giving prices f. o. b. New York or Chicago, and we also cheerfully furnish you with any information that may be desired. Those of our friends who will mail us a list of their requirements will find it has paid them to do so.

Awaiting to hear from you at your pleasure, we remain,
Yours very truly,

Westerbeek & Klyn,
Sassenheim, Holland.

SWEET PEAS.**Arthur T. Boddington Co., New York City
For page see List of Advertisers**NEW BOOK****JUST ISSUED****Plant Propagation Greenhouse
and Nursery Practice** By
M. G. KAINS

So many discoveries of new facts by plant investigators, shortcuts and "wrinkles" worked out by plant propagators, and nursery, greenhouse and garden methods simplified or made more effective, have made books hitherto available on plant propagation out of date.

There has also been an insistent call for a volume that would not only include the character of information wanted by nurserymen and other plant propagators, but also discuss the subject of plant propagation from the standpoint of fundamental principles, and include the latest conclusions advanced by investigators throughout the world.

This new book by Professor Kains will appeal with equal force to the amateur, the professional propagator, and the teacher in agricultural colleges and schools.

The book devotes many pages to special plant lists and condensed directions for propagation of vegetables, fruits, annual and perennial flowers, bulbs, ferns, orchids, cacti, evergreens, deciduous trees and shrubs, vines, water plants, greenhouse and house plants and palms.

The table of contents includes: An introduction on general principles, germination, seed testing, potting, layerage, bottom heat, cuttage, classes of cuttings, graftage, and theories and laws, Daniel's experiments in graftage, tree stocks and scion handling, grafting waxes and wound dressing, methods of grafting considered individually, budding methods, nursery management, and laws affecting nursery stock.

Illustrated 5 1/2 x 7 1/2 inches. 342 pages.
Cloth. Price, net, \$1.50.HORTICULTURE PUBLISHING CO.

NEW YORK, N. Y.DISPOSITION OF UNCLAIMED NUR-
SERY STOCK IMPORTATIONS.

A circular letter has been sent to collectors and officials of the Customs by Assistant Secretary Peters instructing them that unclaimed nursery stock may be sold without the certificate of an officer of the Department of Agriculture, where the collector shall find that a permit has been issued by the Department of Agriculture for the nursery stock, that foreign certificates of inspection are attached to the containers, and that the latter are plainly marked to show the general nature and quantity of the contents, the address of the exporter and of the consignee and the locality where the stock was grown. The present procedure with respect to unclaimed stock not complying with the above, that of burning under government supervision, will be continued.

PUBLICATIONS RECEIVED.

Wind and Weather. By L. H. Bailey. It is many years since we learned to look up to Dr. Bailey with wonder and admiration for his masterly literary ability and his tireless energy. "Wind and Weather," as we peruse its garnered contents brings home a still clearer perception of Dr. Bailey's rare genius. It is a selection of fragmentary verses and sweet songs full of melody and overflowing love of nature in all her moods, now brought together and published for the first time, culled from the accumulation of a quarter of a century. There are one hundred and twenty-seven of these exquisite gems. The book is published by Charles Scribner's Sons, New York, at \$1.00 the copy.

HENRY A. DREER, Seeds, Plants, Bulbs, and Supplies, 714 Chestnut Street, Philadelphia, Pa.

Tewksbury, Mass.—During a severe thunder storm on Sunday, July 2, much damage was done to trees and to wires of street railway and telephone companies and to many houses in Tyngsboro, Dracut and Tewksbury, Mass. Three greenhouses of A. C. Tingley, florist, were badly shattered and his water tower, capacity 6000 gallons was carried 100 yards away from its site. Frank H. Farmer sustained a considerable damage to his greenhouses. Hailstones broke considerable glass for the vegetable growers in and about North and West Westford.

PINO-LYPTOL

WEED KILLER

THE VERY NEWEST AND QUICKEST METHOD OF DESTROYING WEEDS, GRASS AND OTHER GROWTH IN GARDEN WALKS, GUTTERS, TENNIS COURTS, DRIVEWAYS, ETC.

This fluid absolutely destroys all weeds and other growth wherever applied, and its effect on the ground prevents the growth of fresh ones for a year and thus saves a great deal of time and labor, as no cutting, hoeing or hauling away of the weeds is required.

We manufacture the strongest line of DISINFECTANTS on the market.

P.-L. CHEMICAL CO., 507-509 W. 19th St., New York

CORRESPONDENCE SOLICITED.

A BOON FOR CARNATION GROWERS.

That carnation growers are not all satisfied with the various devices they have been using in years past for supporting their plants is quite evident from the number of inquiries received at this office regarding the continuous ring support ever since the Carnation Support Company, of Connerville, Ind., have been advertising their specialties in this paper. The accompanying cut will tell the story of the form and arrangement of this very ingenious device better than words, and a full description in detail can be obtained by writing to the company. The figure shows a small section of a fully equipped bench. Among the improvements and special features of these supports, a few are very important. They are self-tying, are adjustable to

the growing plant in height, are very artistic, give easy access to the soil without injury to the plant, pack flat when not in use, and greatest of all they are made to suit benches with any number of plants across.

Burnhams are made in over 80 sizes for both steam and water.

Grates shake half at a time. Every flue has a separate clean-out door.

Marching Orders for Burnhams Should be Sent at Once

WHAT is the condition of your Boiler and Heating Apparatus?

Do you realize that freight moves very slowly these days.

For months the railroads have been refusing to ship certain things under certain conditions.

Freight that ordinarily has reached our customers in a week; has finally turned up a month later. Perhaps two months.

From the looks of things, it will be some time before shipping conditions change much.

Business of all kinds is so good, all over the country, that the roads simply haven't the cars to handle it.

To have your boiler held up in the Summer time, although mighty inconvenient; is not so serious a matter.

But when firing time comes; and your old boiler is out; or leaks like a sieve; that's the time prompt delivery of your new boiler means money to you. Money and real money.

You know just as well now, as you'll know two months from now, that you need a boiler.

Then why not send along your Burnham Marching Orders at once?

Send them now, so you will surely have your boiler by the time you actually need it.

Then there's another thing to remember; we are rushed with orders and in spite of all we can do, there will be some delays in shipments from our factory.

We urge your ordering now, not because it matters particularly to us; but that it does particularly matter to you.

Send your Burnham Marching Orders at once.

The purely practical growing houses at Longview Farm, R. A. Long's Country place, near Kansas City.

An Interesting Example On Practical Practice

SOME 20 or 30 miles from Kansas City is R. A. Long's country place. Here he has two purely practical growing houses. Absolutely nothing fancy, just two parallel houses, each 200x38 feet. Each one is divided by glass partitions into four compartments. The construction is practically the same as our highest type of commercial houses.

Here it is that plants, flowers, vegetables and fruits are produced in large quantities; not alone for the "big house on the hill," called "Long-view," but also for the "town house" or Kansas City residence."

At the town house, they also have a palm house and general foliage plant house, both of which were erected some ten or twelve years ago.

We tell you these things because we know that many gardeners are continually up against it, to produce enough in their houses to satisfy the ever increasing demands of their employer.

All too often, we have a notion that the ornamental in greenhouse ranges is secured at the sacrifice of the practical.

That it is possible to combine both satisfactorily, we have demonstrated over and over again.

But after all is said and done, what a man builds a greenhouse for, is to produce things. That house, then, which produces the most, is most likely to be most satisfactory.

Not that we suggest making a practice of building plain, commercially constructed houses on private places; but we do believe there is a happy medium that would prove highly satisfactory.

Let's get together and talk it over. Perhaps between us, we can work out something decidedly better than has ever yet been done.

You say when and where and we'll be there.

The palm house at Mr. Long's Kansas City residence.

The plant house at Mr. Long's Kansas City residence.

Boddington's Re-selected Winter-flowering Spencers as grown by Wm. Sim, Cliftondale, Mass.

Boddington's Winter-Flowering Spencer Sweet Peas

The New Sensational Australian Spencer Winter-Flowering Sweet Peas

The following varieties are, without doubt, the greatest and most valuable novelties introduced since the famous Yarra-awa Spencer marked the commencement of a new era in Winter Sweet Peas. Owing to the intense drought in Australia, the crop of this splendid Sweet Pea is very short and our stock is limited; we therefore advise early ordering, to avoid disappointment.

NOW READY FOR DELIVERY

CONCORD DAYBREAK

Cream with standard heavily edged buff-pink. As the flower opens the cream changes to almost white, and the cream-pink edging to a faint rosy tinge.

CONCORD CHARM

Combines the delicate shades of white and blue-white wings and very light heliotrope standard, shading to nearly white.

CONCORD COUNTESS

Most attractive tint of pink, the ideal flower color.

CONCORD COQUETTE

Has a white ground, faintly marked or mottled light rosy carmine, the standard showing color more heavily than the wings.

CONCORD EMPEROR

A rich crimson-red variety. One of the best and most useful varieties in this class.

CONCORD PURPLE

Delightful shade of mauve purple, changing, as the flower ages, to purple-blue.

CONCORD RADIANCE

A very striking shade of rosy magenta; this variety is one of the showiest. The color varies according to the age of the flower, but this adds to its attractiveness.

CONCORD WINSOME

Of a delightful shade of pink, tinted lavender; a most fascinating color. A specially beautiful variety.

COERULEA

A glorious Sweet Pea of the most delightful shades of delicate sky-blue, sometimes a little lighter.

RUBY

A glowing light crimson-scarlet color, blooms of good size, Spencer form, carried in threes, well placed on good wiry stems.

SALMONEA

A rich rosy salmon variety of great merit.

Prices on all the foregoing, except Concord Daybreak: Pkt. (18 seeds) 35 cts.; 5 pkts. of any one variety, \$1.50.

Yarra-awa

Bright rose pink, with light wings. Seed sown early in September will flower about December 1, and bloom profusely and continuously until May. They are borne usually in fours on extra-long, strong stems. Awarded Certificate of Merit, International Flower Show, New York, 1914, and the Pennsylvania Horticultural Society, March, 1915.

	1/4 oz.	1 oz.	1 lb.	1 lb.

Popular Spencer Winter Sweet Peas of Recent Introduction

The varieties offered below are now too well-known to need much description; we classify colors to make ordering easy. All our stocks are re-selected and can be thoroughly relied upon to come true to description and color.

Pink and White

	1/4 oz.	1 oz.	1 lb.	1 lb.
Christmas Pink Orchid. Standard bright pink, wings white, an improvement over the Pink and White Orchid.....	\$1.00	\$3.00	\$10.00	\$35.00
Pink-and-White Orchid. Similar in color to Christmas Pink, but produces a larger flower on longer stems.....	.25	.75	2.50	9.00
The Czar. Standard rose, wings white, mottled with pink; strong grower..	.25	.75	2.50	9.00

Pink and Light Pink

	1/4 oz.	1 oz.	1 lb.	1 lb.
Bohemian Girl. One of the finest pink selfs. The same shape as Mrs. A. A. Skach, but the color is darker, with light scarlet blush.....	\$.50	\$1.50	\$4.50	\$15.00
Fordhook Pink. The color is a beautiful rose-pink on white ground shading deep pink toward the edge of the standard and wings.....	1.00	3.00	10.00	35.00
Morning Star. Exceptional large flower of self pink color.....	1.00	3.00	10.00	35.00
Mrs. Jos. Mandu. Light shell pink, with extra long stem, flowers very ruffled, becoming a brighter pink the longer they are cut.....	.40	1.25	3.75	14.00
Miss Florence Roland. Light pink with salmon; fine shape and good grower.....	.50	1.50	4.50	15.00
Mrs. A. A. Skach. Beautiful, clear, bright pink. Much larger than Countess Spencer and slightly darker... ..	.35	1.00	3.50	12.00
Rose Queen. A pink of sterling merit and of most pleasing shade. Sown indoors July 25, first flowers picked October 1, continued blooming until Easter. Could not be improved upon.50	1.50	5.00	15.00
Selma Swenson. The color is clear, light, soft pink with waved petals.	1.00	3.00	10.00	35.00
Yarra-awa. Bright rose-pink. The best pink for florists. Continuous bloomer, almost always 4 flowers on a stem. Introducers re-selected stock. California grown seed.....	.60	2.00	7.00	24.00
	.35	1.00	3.50	12.00

White and Blush

	1/4 oz.	1 oz.	1 lb.	1 lb.
Bridal Veil. Pure white. In size and purity of color, one of the best....	\$.35	\$1.00	\$3.50	\$12.00
Mrs. M. Spanolin. Double; white. Black-seeded.....	.35	1.00	3.50	12.00
Venus. Standard slightly blush-pink; in winter more white.....	.50	1.50	4.50	15.00
White Orchid. Pure white; has stood the most critical tests.....	.35	1.00	3.50	12.00

Red and Rose

	1/4 oz.	1 oz.	1 lb.	1 lb.
Belgian Hero. A beautiful rose-colored variety. Handsome flower....	\$1.00	\$3.00	\$10.00	\$35.00
Fordhook Rose. A charming shade of rosy carmine. Well recommended.	1.00	3.00	10.00	35.00
Orchid Beauty. Dark rose-pink, with orange blush.....	.25	.75	2.50	9.00
Red Orchid. Bright cherry red, very fine shape, large and free bloomer.35	1.00	3.50	12.00
Sensation Scarlet. Early, very productive and throws three to four flowers in stems. Bright scarlet... ..	1.00	3.00	10.00	35.00

Apricot and Orange

	1/4 oz.	1 oz.	1 lb.	1 lb.
Apricot Orchid. Mostly apricot self. A cross between Miriam Beaver and Mrs. A. A. Skach.....	\$.60	\$1.50	\$4.50	\$15.00
Orange Orchid. Standard orange, wings dark salmon-pink, beautifully colored and formed.....	.60	1.50	4.50	15.00

Lavender and Blue

	1/4 oz.	1 oz.	1 lb.	1 lb.
Anita Wehrmann. A beautiful shade of lavender; large flowers, long stems, very prolific and well fixed.	\$1.00	\$3.00		
E. Burke. The flowers are large, borne usually in fours on long strong stems; very early and fixed. We recommend this as the best lavender winter-flowering Spencer to date. Trade pkt. (25 seeds) 50c....	2.50	6.00		
Mrs. John M. Barker. The standard is lilac, with glistening dark rose, wings light blue on white ground.50	1.50	4.50	15.00

New crop seeds ready for delivery in late July and early in Aug.

Any other variety not in above list can be supplied.

New Early Flowering Giant Pansies Or Winter Blooming

An entirely new and distinct strain of Pansies. The main advantage of these new Pansies over all hitherto existing Pansies is the extreme earliness of flowering and its unusual hardiness, which enables them to withstand quite severe Winters, and to bloom right on into the Summer. Sown at the same time as other Pansies, they begin flowering the early part of March or as soon as the snow is off the ground, many times having four or five large flowers to a plant, when all other Pansies are only showing buds. The flowers are large, well formed and fragrant. They are highly recommended for Autumn planting on graves, and for very early bedding, as well as for early cut flowers.

14. **WINTER SUN.** Golden yellow with dark eye.
15. **ICE KING.** Silvery white with dark blue eye.
16. **CELESTIAL QUEEN.** Light or sky blue.
17. **CHARM OF MARCH.** Dark velvety blue.
18. **MIXED.** The above four colors with other shades and variations.

Each color separate or mixed.

500 seeds 50c., 1000 seeds \$1.00, 1/8 oz. \$2.00, 1/4 oz. \$3.75, 1 oz. \$15.00.

For list and price of other Kenilworth Pansy Seed see my ad of July 8.

FREE OFFER RAINBOW is a mixture of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every \$1.00 worth of Pansy seed I will send, free, 1000 seeds of Rainbow and with other amounts in like proportion.

BURPEE'S EARLY OR WINTER-FLOWERING SPENCERS

The House of Burpee has long been recognized as "American Headquarters for Sweet Peas," and our introduction of these Fordhook Strains of Winter Flowering Spencers marks an era in commercial Sweet Pea growing.

The Novelties offered below, excepting Yarrowa, are the results of crosses made at our Fordhook Farms during the past seven seasons. All stocks are grown at our Floradale Farm, "The California Home of Sweet Peas."

Fordhook Pink and White: A most popular Winter Flowering Spencer. A color that is always in demand, similar to the old Blanch Ferry. Bright rosy pink standard, wings almost pure white. The immense flowers measure 2½ inches in diameter and are perfect in form. A very early, free and continuous bloomer, awarded a Certificate of Merit at the Spring Show of the Pennsylvania Horticultural Society, Philadelphia, March, 1915, and the American Sweet Pea Society, San Francisco, June, 1916. ¼ oz., \$1.25; ½ oz., \$2.00; oz., \$3.50.

Fordhook Pink:—This is a distinct shade of pink suffused with lavender throughout. Flowers are large size, exquisitely waved, produced in threes and fours on long stems. ¼ oz., 40c.; ½ oz., 75c.; oz., \$1.25; ¼ lb., \$3.50; ½ lb., \$6.25; lb., \$12.50.

Fordhook Rose:—Introduced by us in 1915. Flowers of largest size usually borne in threes and fours. A charming shade of rosy carmine. Awarded a Certificate of Merit at the International Show, New York, March 1915, and the Spring Show of the Pennsylvania Horticultural Society, Philadelphia, March 1915. ¼ oz., 50c.; ½ oz., 85c.; oz., \$1.50; ¼ lb., \$4.00; ½ lb., \$7.50; lb., \$15.00.

Yarrowa:—This magnificent Australian variety has proved its unusual merit with commercial growers in all parts of the country. It has an exceptional reputation as a sure-money-maker. First exhibited by us at the great International Show in New York, March 1914, and awarded a Certificate of Merit by the Pennsylvania Horticultural Society, March 1915. Flowers exquisitely waved, averaging 2½ inches in diameter, many of them being duplex or double. A bright rose pink with a clear creamy base. ¼ oz., 55c.; ½ oz., 60c.; oz., \$1.00; ¼ lb., \$2.75; ½ lb., \$5.00; 1 lb., \$10.00.

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—Pope.

Achimenes

When the soil becomes filled with roots they will stand a good supply of water and would be greatly benefited by a weekly application of liquid manure. Keep these plants nicely staked so as to have in good form before the buds start to open. When the flower buds are fully formed and just before they begin to open they can be moved to a cooler and airy house that is well shaded. Be careful not to submit them to too great a change at first, but gradually inure them. They will do better here at this stage than if kept in warmer quarters where they are bound to make a drawn and spindly growth. When they are through blooming place them by themselves in a moderately warm house where they will have plenty of light and air and gradually withhold water at the roots.

Asparagus Sprengeri

These plants always do better planted in solid beds. Give them a very rich compost, a foot deep. Equal parts of turfy loam and cow manure will not be a bit too rich, as they are very greedy feeders. It can also be grown in suspended baskets or in a narrow bench running along the front or the rear of a well-lighted house. A soil that will grow roses will be all right for it but you can make it richer. It will do finely in a temperature of about 55 degrees at night, or a little higher with plenty of moisture at its roots. They can be set from 15 to 18 inches apart between the plants.

Housing Carnations

The first thing to do is to shade the house with some material that will come off easily in about ten days. Give the houses a thorough cleaning and make provision for whitewashing the inside of all benches as lime is a germ destroyer and also helps to preserve the wood. All good growers consider from now and up until the middle of August the best time to house carnations. Any time later means a loss in the crop of flowers. When lifting the plants from the field, remove them as quickly as possible to some place protected from sun and wind. If you have plenty of plants select only the best and most shapely for benching. Make a hole just large enough to hold the roots nicely and bear in mind it is always better to set the plants a little higher than they were in the field, or the stems are liable to rot.

Next Week:—Antirrhinums; Beds of Adiantum; Chrysanthemums; Orchids; Rambler Roses; Reminders.

Lorraine Begonias

Shade just enough to keep the foliage from burning. A heavy shade only tends to keep them too soft. Give them a look over two or three times a day so none will be left in a dry state, and avoid careless watering at all times. If at all potbound don't wait a time to shift, but do not shift unless you are positive that the plants are in need of it. The main thing is to give a porous soil. We are using loam and leaf mold mixed with about one-fifth of well rotted cow manure for the present shifting and this with plenty of drainage in the pots seems to suit the plants nicely. Don't overlook keeping the flowers and buds removed. Growth is what you want now and not flowers. If the plants are free from green fly, as good a way as any to keep them so is to apply weekly a light spraying of a nicotine solution.

Mignonette for Winter

Where it is possible, give mignonette a solid bench, but where this is not possible they should have at least from 10 to 12 inches of soil to grow on. They should stand about 12 inches apart each way. The best way is to draw lines lengthwise and crosswise and the seed can be sown where the lines meet, using four to six seed at each junction. Make the compost rich as they require lots of plant food. The best soil is that taken from an old pasture last fall and piled up over the winter. To two loads of this use one load of cow manure and a good sprinkling of bone meal and turn this over two or three times so they will be well mixed. When the benches are filled make the surface nice and fine for the seed. Cover the seed lightly and water with a fine rose until the soil around the seed is well moistened.

Reminders

Keep the soil well stirred between all growing crops. Keep all the surplus shoots regularly removed from chrysanthemums.

Let the young smilax climb now where they have thickened out at the bottom.

Keep the atmosphere in all houses moist by several dampings daily during this month and next.

Buy some pansy seed and sow now, also some of the "tufted pansies," *Viola cornuta*. They are extremely floriferous.

as a general rule, unusual susceptibility to fungous attacks is to be expected from these prevalent conditions which not only favor the propagation and spread of all fungous forms but also make the plant tissues soft and an easy prey to these insidious attacks. One cannot be too vigilant in watching for the first traces of the many mildews, blights, molds, and rots to which plants are variously subject nor too early in the field with the sprays and other applications which, as the experienced cultivator knows, are vastly more efficient when applied early and then followed up persistently than when brought into use only after trouble has got a start. Delays are dangerous.

Rose gardens coming

We have heard from a number of places where municipal rose gardens are being established this year or are being planned. It is

only a question of time—and that not very long—until a rose garden will be regarded as an indispensable feature of every public park, and private estates generally will follow suit. Until the advent of the hardy hybrid teas and everblooming polyanthas there was little inducement for the making of rose gardens in the northern and eastern United States. Now, there is abundant recompense for all the labor and attention incident to the proper planting and care of the Queen of Flowers and with prospects as they now appear the garden rose industry is only in its infancy in this country. In the effort to improve and add to the number of forcing roses American rosarians have been in the past concentrating all their thought on a single ideal and, no doubt, hundreds of seedlings have been thrown away because they failed to measure up to the forcing rose standard, which, had they been given an opportunity to qualify would have proved invaluable as garden varieties. With the rapidly developing demand for the latter comes a new incentive to rose hybridizing in this country and we shall be surprised and disappointed if American grown varieties do not in the very near future outstrip and outclass for garden use the foreign productions upon which we have hitherto been so largely dependent.

Publicity

At their recent meeting in Milwaukee the American Nurserymen passed the following resolution, introduced by W. H.

Wyman:

Resolved: That the incoming president be directed to appoint a Committee on Publicity, to consist of seven members, selected from seven sections of the United States, to which shall be committed the various propositions and discussions presented at this convention relating to obtaining better and larger markets for our products; and that the executive committee be requested to provide such funds as are practicable for the support of this work; this Publicity Committee to report to our next convention a practicable plan for co-operative publicity.

Gradually, by slow stages but none the less surely, the horticultural interests in this country are falling into the line of progress in keeping with the policy of representative commercial institutions generally in recent years. Individual advertising is, of course, an indispensable adjunct of modern trading, but apart from this and quite as essential for the direct development and expansion of any special industry as well as the ultimate individual prosperity of everyone engaged in such business is the broader educational publicity campaign which only an organized representative agency can effectually carry out. Our societies and associations will in time require a lot of money for this use, for there is a limit to the measure of volunteer service by men capable for such work.

Preparedness

It is well for every grower to watch-fully consider the ultimate effect of this unusually wet and cold season on his plants. Field or garden crops of any kind must necessarily be affected to a greater or less extent and

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur R. Zich

Drying Off Old Plants

Now that business has slackened up no time should be lost in finishing up the planting, and if the plants in the benches are to be run all over again they should be allowed to dry off at once. Gradually withhold the water until the soil is very dry and the plants are beginning to lose their leaves. The plants can then be pruned, carefully lifted out of the old soil and planted in where they are to grow for the coming season. If they are to remain right in the old bench, in the old soil, see that all the loose soil is removed from the top and a good dressing of bonemeal applied, after which a mulch of half manure and half soil can be applied, and the plants started again. Roses should never be pruned while they are wet, neither should they be cut back, as our experience has been that they will not do nearly as well as they would if they were properly dried off and started again.

Care After Planting

As soon as a bench of the old plants is finished, see that they receive a real good watering. With certain soils it will be necessary to go over the benches twice in order to make sure that the soil is wet all the way through. If the soil happens to be rather dry it will be better to water the bench lightly several hours before planting time. This will not only make it much easier to plant but will be much better for the plants, more so if the day is bright and the sun very hot. Firm the soil well around the roots so that there will be no air spaces and the plants will be able to take up water and start right off. Care should be taken to give the plants plenty of water and keep them sprayed five or six times a day until they start. Needless to say they should not be soaking wet all the time but they should not be allowed to dry out as much as they would be if they had started. On cloudy days two or three sprayings will suffice and if the plants are planted in a house with a lot of young stock in full leaf one spraying in the morning will have to do. As soon as they start, give water only when needed and restrict the syringing to a quick syringe on clear mornings. Make sure that the plants are not too dry when syringing as the new leaves are very tender and will burn easily. If only about four inches of soil is used and it is of a porous nature and the old plants are quite bushy, it will be as well to start right in and water the whole bench instead of watering right around the plants as is done with young stock and with old plants under certain conditions. Make sure that the surface of the benches is left rough enough after planting to insure proper distribution of water. If all the lumps are crushed too fine the water is likely to run all over the bench, soaking the soil too much in some places and leaving it almost dry elsewhere. As soon as time permits, the old plants that were replanted should be staked and tied. This will make all the new wood grow in the right direction and save much time in tying later on. Plants that are grown right in the same benches will not have to be cut away from the old stakes or wires and can be retied whenever necessary. In stringing the plants to wires be careful not to tie the slip knot too

tight, for the wood will swell to twice the thickness before the season is half over and if tied very tight now it will choke the plants later on.

Staking Grafted Plants

As soon as time permits, stake all grafted plants, as it will be impossible to syringe them properly if they are allowed to lie around loose. They break very easily, so there is nothing to be gained by having them lie around. If care was used in planting, the plants will be away down on the bottom of the bench so that the union of the graft and stock will be below the level of the soil. Put the stake quite close to the plants, and tie them straight to it, gently but firmly and without any twisting, for this would surely damage the union and the graft would take a long time to come to, if it should happen that it did not break off altogether. Make sure to get all the stakes on the same side of the plant, and as straight as possible. It may be a little difficult at first but as soon as a person gets accustomed to the work it will come easy, then the finished job will look like something. Tie all stakes securely with good cord so that there will be no danger of their getting loose when syringing later on and sliding this way or that, which is very annoying to say the least.

Saxifraga III

(See Cover Illustration)

Some of the robust growing species of saxifragas have even a wider scope of general usefulness than the Alpine classes treated in the previous notes. Their large evergreen foliage of substantial, almost leathery, texture is decidedly ornamental. Preferring rather moist situations they prove excellent subjects for shore plantings of brook, pond and pool, thriving equally well in partial shade as in the open sun. The best known saxifragas in American gardens are those of the Megasea type described in European standard works under Megasea or Bergenia. In bloom from early in April until May, their large pink panicles add a desirable diversity of floral forms and colors during the opening days of a new season. At that time the human mind is most appreciative: our eyes joyfully accept the early harbingers of spring in the garden even in comparatively modest array. I believe the saxifragas under consideration in this note merit more space on our hardy herbaceous borders than they have been given. Our illustration showing a specimen plant of the well-known *Saxifraga cordifolia* is calculated to demonstrate its effectiveness in the rock garden. The species orbiculare, speciosa, squarrosa and van Houttei in addition are not only useful but simply indispensable, especially for large rock gardens with water-course and pool. Our native *Saxifraga peltata* with handsome pink flowers may be naturalized along water lines in park landscapes or established in moist sections of the wild flower garden where it requires little or no care.

In conclusion I wish to call attention to the less conspicuous but nevertheless interesting *Saxifraga sarmentosa* and the shade-loving *S. umbrosa* for occasional employment. With the exception of *sarmentosa*, which is not hardy in the north, plantations survive our winters without injury. In order to retain the perfection of the evergreen foliage I prefer to give plants a light covering in December. Propagation is by divisions, cuttings and sowings; *Saxifraga sarmentosa* also by runners.

THE EXHIBITIONS

MASSACHUSETTS HORTICULTURAL SOCIETY'S SWEET PEA SHOW.

The annual exhibition of sweet peas at Boston was held on Saturday and Sunday, July 8-9, the entries comfortably filling the large hall in Horticultural Building. The show suffered from a lack of elevation and greenery the flowers being shown in small vases in monotonous array, without foliage, the long white covered tables and light colored walls contributing to the characterless effect. As for the sweet peas themselves they were very fine and there were lots of them in every conceivable color, and for the purpose of comparison and inspection of varieties it was unquestionably a good show. Some central feature arranged high for effect and a few side groups in the way of plants and greenery for a setting would have added greatly to the impressiveness of the exhibition.

List of Awards.

Twenty-five sprays, any white variety: 1st, Mrs. Robert Winthrop, Constance Hinton; 2nd, Edwin Jenkins, Edna May Improved, Crimson or Scarlet. 1st, Edwin Jenkins, Sunproof, Crimson; 2nd, Mrs. Robert Winthrop, Scarlet Emperor, Carmine; 1st, Mrs. Robt. Winthrop, Rosabelle; 2nd, Edwin Jenkins, George Herbert. Yellow: 1st, A. N. Cooley, Mrs. Dameron; 2nd, Mrs. W. G. Weld, Mrs. Dameron. Blue: 1st, Mrs. Robert Winthrop, Blue Monarch; 2nd, Edwin Jenkins, Blue Monarch. Blush: 1st, Mrs. Robert Winthrop, Lady Evelyn Eyre; 2nd, Stuart Duncan, Agricola. Deep Pink: 1st, Mrs. Robert Winthrop, Hercules; 2nd, Edwin Jenkins, Hercules. Cream Pink: 1st, Stuart Duncan, Mrs. Hugh Dickson; 2nd, Stuart Duncan, Miriam Beaver. Orange: 1st, Mrs. Robert Winthrop, May Unwin; 2nd, A. N. Cooley, May Unwin. Lavender: 1st, Stuart Duncan, Orchid; 2nd, Edwin Jenkins, Don Alvar. Purple: 1st, Mrs. Robert Winthrop, Royal Purple; 2nd, Stuart Duncan, Royal Purple. Maroon: 1st, Stuart Duncan, John Ridd; 2nd, Mrs. Robert Winthrop, King Manoel. Picotee edged: 1st, Mrs. Robert Winthrop, Jean Ireland; 2nd, A. N. Cooley, Dobbie's Blue Picotee. Striped or Flakes Red or Rose: 1st, Edwin Jenkins, Jessie Cuthbertson; 2nd, Mrs. Robert Winthrop, Jessie Cuthbertson. Striped or Flaked Blue or Purple: 1st, Mrs. Robert Winthrop, Bertha Usher; 2nd, A. N. Cooley, Bertha Usher. Bicolor, other than Picotee-edged: 1st, Mrs. Robert Winthrop, Mrs. Cuthbertson; 2nd, A. N. Cooley, Mrs. Cuthbertson.

Iris Kaempferi.—Collection or not less than six varieties, filling twenty five vases: 1st, A. J. Jenkins.

In the classes for amateurs only, the varieties which won in the various colors were as follows:

White—Edna May and Constance Hinton. Pink—Hercules and Miriam Beaver. Dark Pink—George Herbert. Lavender—R. F. Felton and Florence Nightingale. Salmon—Barbara and Salmon Pink. Crimson—Sunproof of Crimson. Primrose—Dobbie's Cream and Floradale Fairy. Scarlet—The President and Fiery Cross. Any other color—King Manoel and Royal Purple.

In addition to the competitive entries there were large entries of sweet peas from A. J. Jenkins, Mrs. W. G. Weld, Thomas Burrows, Margaret J. Miller, Geo. E. Barnard and others which were recognized by gratuities. Similar attention was given to a collection of roses from A. W. Preston, *Trachelium caeruleum* from Oliver Ames and a collection of herbaceous flowers from Blue Hill Nur-

COMING EXHIBITIONS.

July 20, Worcester, Mass.—Sweet Pea Exhibition, Worcester Horticultural Society.

August 24-25, Lewiston, (Me.) Annual Flower Show, Gardeners Union, Lewiston City Hall.

July 26-27, Southampton, N. Y.—Tenth Annual Flower Show, Southampton Horticultural Society.

August 3, Oyster Bay, L. I., N. Y.—Dahlia Show, Oyster Bay Horticultural Society.

August 11-12-13, Boston.—American Gladiolus Society, Horticultural Hall.

August 24, Worcester, Mass.—Gladiolus Exhibition.

Sept. 2-9, Cleveland, Ohio.—Industrial Exhibition and Fair.

Syracuse, N. Y., Sept. 11-16.—New York State Fair.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

series. A splendid collection of sweet peas from S. W. Carlquist won for him the exceptional honor of a silver medal.

A special exhibit of Japanese Iris will be given at Horticultural Hall, Boston, on Saturday, July 15, from 12 to 5 o'clock. A large display of these wonderful blooms will be made by Allen Jenkins, gardener to Dr. and Mrs. Homer Gage, of Shrewsbury, Mass. Mrs. Gage for a number of years has been much interested in the culture of these flowers and has probably the largest collection in the country. There will be also on exhibition a collection of seasonable fruits, postponed from last week on account of the backwardness of the season. The exhibition is free to the public.

WM. P. RICH, Sec'y.

NEW BEDFORD (MASS.) ROSE SHOW.

The 1916 rose show of the New Bedford Horticultural Society was held in the basement of the Free Public Library on Thursday afternoon and evening, July 6. It was unusually fine and was admired by a large number of visitors. As usual, from the Converse Gardens, at Marion, came a notable array of roses and a splendid

display of about 300 blooms came also from the gardens of Sarah B. Fay. The exhibition from the Fay gardens was not for competition and was up to the usual high standard of excellence.

Miss Alice Stackpole, from her Matapoisett place, sent a general exhibition of roses that showed excellence both in care and selection. Andrew J. Fish exhibited for the first time a new seedling climbing rose of the single variety which he has named Purity. He was awarded a first-class certificate. The display of climbing roses shown by Mr. Fish was especially beautiful; and the Silver Moon rose display of Mrs. E. E. Baudoin has had nothing to excel it in any of the exhibitions of the society. There were fine displays of hardy perennials from a number of exhibitors. Wm. Keith got a special award for exceptional sweet williams and the Tripp cup for irises was won by Dr. G. de N. Hough. L. J. Hathaway, Jr., Mrs. H. A. Jahn, Howard Stockton of E. Wareham, J. S. Fiqueredo and W. K. Smith figured among the prize winners.

CLEVELAND INDUSTRIAL FAIR.

Preliminary work is being pushed energetically in the Flower Show section of this big event which is in charge of M. A. Vinson who managed the successful exhibition in that city last year. Posters have been distributed with special literature to the florist trade in and about Cleveland, showing a diagram of spaces in Tent F, 180 x 90 ft. area, which will be reserved entirely for horticultural displays. This section will be in charge of a committee of the Cleveland Florists' Club, as follows:

Timothy Smith, retail florist, chairman; Frank A. Friedley, commercial grower; H. P. Knoble, retail florist; Chris. B. Wilhelm, retail florist; E. A. Bause, superintendent J. W. Corrigan estate, Wickliffe, O.; O. P. Blackman, superintendent W. S. Tyler estate, Rocky River, O.; Geo. Jacques, superintendent Wm. G. Mather estate, Bratenahl, O.; Robert Weeks, superintendent A. F. Holden estate, Bratenahl, O.

SWEET PEA SHOW AT SAN FRANCISCO.

Exhibit of the L. D. Waller Seed Co., of Guadalupe, Calif.

NEWS FROM THE CONVENTION CITY

HOUSTON CONVENTION ENTERTAINMENT.

The local executive committee for the S. A. F. convention is composed of the following:

R. C. Kerr, Houston, chairman; Henry Greve, Dallas; L. J. Tackett, Forth Worth; Louis Oesch, Dallas; F. W. Hensel, College Station; T. J. Wolfe, Waco; J. E. McAdam, Fort Worth; H. O. Hannah, Sherman; Bird Forrest, Waxahachie; Chris Houser, San Antonio; E. E. Stone, Dickinson.

The entertainment plans for the visiting members have just about been completed, and will show that we have outlined a program that will keep the members on the go pretty much all the time except when they are attending to business. We propose to show at this convention the hospitality that is always displayed at such conventions in the South. With the number of important matters that are to come up that are of vital interest to this society, and with a very interesting entertainment program, we hope the Houston Convention will go down in history as the most enjoyable in the history of the society. This is our aim. We believe that the florists of the country realize this, and as indications show, we feel that our success from the standpoint of attendance and exhibits and of important business that is to be transacted, the members will turn out in full force.

The following is a general outline as to what we expect to give the visiting delegates:

A trip down the ship channel to the San Jacinto Battle Grounds. Barbecue and other refreshments to be served on the grounds, and a program of sports will be prepared to entertain the visitors. We also will make a trip to Galveston, take a dip in the surf and dinner at the Hotel Galvez afterwards. Also a band concert at the Convention Garden. Will have a special moving picture that will be of interest to the S. A. F. members. The usual automobile ride over the city will not be overlooked in Houston. We have possibly more paved streets, beautiful homes and more beautiful suburbs than any other city of its size in the country. We are just completing a boulevard ten miles long, which is unsurpassed by any city of its size in the country. There are other side attractions that will make our entertainment worth while.

R. C. KERR, Vice-Pres. S. A. F.

TEXAS WELCOME FOR SECRETARY YOUNG.

Plans have been completed for a dinner in Dallas on the evening of July 17, honoring John Young on his visit

to Texas. Mr. Young comes a little ahead of time to complete arrangements for the convention in Houston. After a day or so in Dallas, Secretary Young, Vice-President Kerr and others will visit a number of the cities in the State by automobile, provided the weather permits. They expect to work in the interest of the Society while on this trip. Indications are that Mr. Young will be given a rousing reception on his visit to Dallas, and while this is a north Texas meeting it is anticipated that a number of florists from other parts of the State will visit Dallas for this occasion.

CHICAGO TO HOUSTON.

The going trip on the occasion of the annual convention of the Society of American Florists, to be held at Houston, Tex., August 15-17, will be one of the pleasant features, as it will convert an ordinarily tedious journey into a most enjoyable one. The route takes us through highly scenic and picturesque country. Occupying our own special cars we leave Chicago via the Wabash Midnight Banner Express at 11.55 P. M., Sunday, August 13, and arrive in St. Louis at 7.40 Monday morning. The party will have breakfast here, enjoying the well-known Harvey service. Members from other points will join us in St. Louis, and our special cars will be attached to the Iron Mountain Texas Limited, leaving at nine o'clock. A short distance from St. Louis we pass the United States recruiting station, Jefferson Barracks, which will be of especial interest at this time. For a distance of 22 miles we skirt the shores of the Mississippi. Continuing our journey we soon arrive at the heart of the Ozark Mountains, Little Rock

and Benton, Ark. In close proximity is the famous pleasure resort, Hot Springs. At 11.30 that evening we enter the great state of Texas at Texarkana, which takes its name from Texas and Arkansas. At this point one may be sitting in Arkansas, and by crossing the aisle of the car can be in Texas. The night and following forenoon are spent in a direct southerly path through Texas via Palestine and Trinity to Houston, where we arrive at two o'clock that afternoon in time for the opening of the convention. One can readily perceive the social advantages and the added pleasure afforded in making this trip together through this most interesting section of our country, and many have already expressed their intention of being with the party. You are cordially invited to join us.

The fare from Chicago to Houston is \$30.21. The charges for Pullman sleepers from Chicago are as follows: Double lower berth, \$6.75; upper berth, \$5.40; drawing room, \$24.

Circle Tours.

One can purchase a circle tour ticket which permits going to Galveston (with a stop at Houston), boat from there to New York, a seven day cruise on the Mallory Line, including one-day's stop over at Key West, and return to Chicago via Niagara Falls and Detroit; or via Philadelphia and Washington. One can also take the Atlantic Line from New Orleans direct to New York, a five-day trip, and from New York as above mentioned. Cost of either of these tours is but \$80. Meals and berth on boat are included.

For further details, Pullman reservations, and other particulars, address H. L. Purdy, care of Wabash Railway Co., 808 Edison Building, Chicago. Telephone, Harrison 4500.

MICHAEL BARKER.

Chairman Transportation Committee, Chicago Florists' Club.

DREER'S AQUATIC POOL.

In Convention Garden, Houston, Texas.

CLUBS AND SOCIETIES

FLORISTS' CLUB OF PHILADELPHIA.

For a mid-July meeting and a hot night Dr. Washburn has reason to feel proud of the good audience that turned out to meet him at the regular monthly meeting held on the 11th inst. He gave us a splendid talk on how the National Farm School is making: "good florists, gardeners and farmers out of the submerged tenth" of the great cities. What particularly delighted the audience was the common sense views that Dr. Washburn expressed—so rare with the average professor. The doctor's remarks were so sane, wise and sensible and so unusual—coming from an academical rather than a practical source. Usually a professor from a college who appears before us is listened to with easy tolerance—and that smile on the faces of the men who know forty times more than he does—but Dr. Washburn has the rare distinction of being able to make a trade meeting of experienced horticulturists "sit up and take notice." And we have to take our hats off to Dr. Krauskoff and his little coterie of Jews who founded the school and were clever enough to find a non-sectarian scientist and a New England college graduate to take charge of the practical work—even if he was a Yankee and not a Jew. We are informed that the school has broadened and is now non-sectarian—open to all who can qualify—Jew or Gentile. The Florists' Club of Philadelphia the representative trade body of this city certainly did itself great credit in inviting a man who has done so much in an untried field as Dr. Washburn to speak before them and the doctor most ably acquitted himself. He has promised us a copy of his address as soon as he can work one of the Burpee stenographers without charge and we hope to publish it in *HORTICULTURE* in the near future. One of the first principles of the National Farm School near Burpee's Fordhook Farms is to get everything for nothing. They never pay for anything. (The "Kelly Street Business Men's Association" will please take notice of this.) The essay committee of the Florists' Club of which Charles E. Meehan and J. Otto Thilow are members are plumbing themselves a little on getting Dr. Washburn as their star for July, but the credit really belongs to Howard M. Earl of Burpee's, who is a brother peach farmer with the doctor—and both threaten to die millionaires in the near future—unless the peach blight strikes Bucks County, Pa.

The August meeting of the Florists' Club of Philadelphia (First Tuesday in August) will be especially interesting, the subject arranged for being "New Ideas in Piping and Heating" and an expert on this subject, Cornelius F. Roland of the National Tube Co., will address the club and illustrate his remarks with motion picture views. Every member will be interested in this up-to-the-minute ex-

position and should make sure that no summer vacation idea prevents him from being present.

GEORGE C. WATSON.

AMERICAN ASSOCIATION OF NURSERYMEN.

The Convention at Milwaukee was an unqualified success. Much business was transacted along the lines of the new policies. The executive committee was authorized to organize a credit, collecting and reporting bureau for the benefit of all the members covering wholesale and retail accounts and the reporting of delinquents and ratings of nurserymen, dealers, etc. Also to obtain through the state vice-presidents a list of all nurserymen entitled to wholesale price lists, compile same and publish, as a confidential matter, a book containing these lists and mail them, under sealed cover, a copy of same to each member. Also to continue the "Confidential Bulletin," of which three issues have already been made, and adopted same as the official organ of the association.

In consequence of the above, and because of thinking legal experience necessary, the office of secretary was merged into that of general manager, and counsel Curtis Nye Smith was chosen.

Officers were elected as follows: President, John Watson, Newark, N. Y.; vice-president, Lloyd C. Stark, Louisiana, Mo.; treasurer, Peter Youngers, Geneva, Neb.; executive committee, same as last year except that J. B. Pilkington succeeds himself and E. S. Welch was appointed on the executive committee also.

The 42nd convention will be at Philadelphia, Pa., in 1917.

The Women's Auxiliary of the American Association of Nurserymen was organized at Milwaukee with officers as follows: President, Mrs. E. S. Welch, Shenandoah, Ia.; vice-president, Mrs. W. C. Reed, Vincennes, Ind.; recording secretary, Mrs. E. R. Taylor, Topeka, Kan.; corresponding secretary, Mrs. Fred Watson, Topeka, Kan.; treasurer, Mrs. L. L. May, St. Paul.

LAKEWOOD GARDEN CLUB.

This new garden club has been formed in Cleveland, Ohio, through the efforts of M. A. Vinson, who is the active manager of the Industrial Exposition and Fair to be held in that city, September 2 to 9, one of the features of which will be a big early fall flower show under canvass. Mr. Vinson discovered that the big residential suburb of Cleveland, which joins the park where the exposition is to be held, did not have a Women's Garden Club and as he saw the need for one, in order to create a greater interest for the Flower Show, he started immediately to lay plans for the organization. This was six weeks ago. The announcement was made in the Cleveland Plain Dealer of July 7th, giving the names of the officers, stat-

ing that a club with a membership of fifty had been organized.

Due credit is given by Mr. Vinson for the assistance received from Mrs. L. Dean Holden, Mrs. A. L. Ingles, who are members of the Cleveland Garden Club, and Mrs. J. H. Rogers, of the Shaker Heights Garden Club in assisting in conducting the first meeting.

Floor plans of the Flower Show Section can be obtained by addressing the show manager at 1393 West 25th street, Cleveland. Premium lists are now in the hands of the printer and will be ready for mailing in the near future.

THAT NEW PEONY SOCIETY.

Editor *HORTICULTURE*,

Dear Sir: I notice in the July 8th issue of *HORTICULTURE* the note by Mr. Harrison in regard to the organization of a northwest peony society, and also your excellent editorial on the same.

While it is not entirely a surprise to me, the knowledge of actual organization causes me to feel considerable regret, for it seems to me the promoters have been somewhat hasty in their action and from the tone of Mr. Harrison's remarks I gather that there is a bit of ill feeling in the matter, which if true is certainly very unfortunate, for the east has nothing but the best of feeling for the northwest.

Mr. Harrison evidently forgets that the matter of exhibitions, while forming a large part of the activities of the American Peony Society, is not its whole end and aim and the hard work and expense that have been put into the nomenclature studies have produced results which are worth many times the amounts that have been paid in the way of dues, not only to the members of the society but to every admirer of the peony, whether a member or not.

This work has been done by eastern men who have given freely of their time and the expense has been paid mostly with eastern money.

The membership west of Chicago is exceedingly small and it is hardly reasonable to expect eastern members to vote to meet in Minneapolis when one stops to consider that at least a week of the busiest season of the year, would be consumed in going and returning, not including the two days at the meeting. And then again it is no farther east than it is west, Mr. Harrison being about the only peony man from that region who has favored the eastern meetings with his presence.

But all this aside there is no doubt that there is a great need of a local organization in that region to extend the knowledge of the peony, but I can see no call for a Fourth of July independence proclamation for the thing could be accomplished in a much more sensible way. If it was simply a matter of exhibitions and competing for prizes, an independent organization would be the logical thing. But there are the important matters of

registration and recognition of new varieties which can not be done effectively only through a national organization.

These with various other considerations would lead one to advocate some such idea as you put forth in your editorial, and it would seem the more feasible as the by-laws of the society provide for sectional vice-presidents, who, when the need arose could look after the interests of their respective sections.

This is the first time that the necessity for such appointment has arisen and it would seem only fair that advantage should be taken of it, for the benefits would be mutual and instead of two independent societies, often working at cross purposes, there would be two affiliated organizations working along the same lines.

A. H. FEWKES.

Newton Highlands, Mass.

CLUB AND SOCIETY NOTES.

The St. Louis Retail Florists' Association meets Monday, July 17, at Mission Inn Garden.

The St. Louis County Growers' Association held a meeting at the Eleven Mile House last Wednesday, at which some interesting discussions took place. It was decided to hold the annual picnic next month, the date and place having not as yet been named.

A GREAT LILY.

On Wednesday, July 12, the members of the Horticultural Club of Boston and others visited, by invitation, the field of *Lilium myrophyllum* (regale) now blooming at the Roslindale Nurseries of R. & J. Farquhar & Co. It was certainly a sight such as has never been seen in this country, rivaling in beauty and impressiveness the famed lily fields of Bermuda and Japan. Here are a quarter of a million bulbs, and a very conservative estimate of the number of flowers that smiled a welcome to the visitors is a round million.

This superb lily, which is one of the best "finds" of E. H. Wilson in his Chinese travels, has all the qualities to make it in time the leading lily for florists' use. Being absolutely hardy, and producing seed freely, bulbs can be raised in any quantity in practically any part of the United States. The pink flush on the buds and the golden tint in the heart of the flower are unique qualities and the fragrance is very pleasant. Another good trait is that the pollen does not shed and stain the petals as in other lilies, so that with this lily the florist, at Easter time, will escape the troublesome job of picking the stamens from flowers as they open.

Mr. John Farquhar gave a dinner to the visitors. The trip was by automobile, through the parkway and calling on Jackson Dawson whose health has been very poor of late.

Bridgeport, Conn.—Carl C. Reck of John Reck & Son, florists, left with the Shriners last Sunday for Buffalo. Mr. Reck will leave the party at Buffalo, branching off from the main tour, and will take in the lake section, stopping at Detroit, Duluth, etc., crossing into Canada.

CALIFORNIA WILD FLOWERS.

By Morris M. Rathbun.

Lovers of wild flower life in Southern California at last have realized one of their fondest dreams—a wild flower garden near the heart of Los Angeles. The first blooms have come to the plants in nearly five acres of Exposition Park, one of the newest in the city's breathing spots, and thousands have made the acquaintance of rare blossoms heretofore accessible only after long trips into the hills in all parts of the state.

The wild flower garden idea was born some years ago, when the park was acquired by the city. One of the most enthusiastic workers in obtaining the land was Frank Wiggins, secretary of the Los Angeles Chamber of Commerce. For years he had sought the money to carry out one of his pet ideas for the park—a wild garden of sufficient size to contain every variety of native plant life in the state. His idea was heartily endorsed by Theo-

Classes from the public schools and colleges are in attendance every hour of the day, Saturday and Sunday afternoons are given over to receptions to the children. A thoroughly posted attendant is placed in charge, who explains to the children the characteristics of the different flowers.

One of the first inquiries of visitors from other cities is concerning the cost. Labor, cultivating, equipment including sprinkler system, plants and incidentals are given as less than eight thousand dollars. The verdict is unanimous that as an attraction and educational feature in a land of flowers, the wild garden is worth many times its cost.

MT. DESERT NATIONAL PARK.

President Wilson, by official proclamation, on July 11, created a new national playground of 5000 acres. The Sieur de Monts National Monument, on Mt. Desert Island, Me., a territory of

View in the Los Angeles Wild Flower Garden.

dore Payne, a florist who is credited with a wide knowledge of the uncultivated flowers of California.

But little headway was made until two years ago, when the county supervisors appropriated nearly half a million dollars for "beautifying and entertainment purposes during 1915," this being California expositions' year. A part of this fund became available and last year, prior to the beginning of the winter rains, two hundred and thirty varieties of wild flowers, shrubs and trees were planted.

The work of planning, preparing and planting was under the direction of Mr. Payne, and it was literally a labor of love. He believes that California's wild flowers cannot be matched anywhere for beauty and variety. The desert, valleys, woodlands and mountains were searched for superior specimens. Journeys aggregating thousands of miles would have to be taken to view what here are gathered in five acres.

In the late spring nearly every blooming variety was in flower, making a sight dazzling to the nature lover. The garden proved of strong attraction not only to sight seers but

majestic beauty. The proclamation was recommended by Secretary of the to students of horticulture and botany. Interior Lane. The acceptance of the Mt. Desert Island tract follows a tender of the tract to the government several weeks ago by George B. Dorr, representing the Hancock county trustees of public reservations.

The new national park embraces more than 5000 acres of rugged mountain land directly south of Bar Harbor, its northern boundary lying within a mile of that famous resort. Touching the Schoonerhead road on the east, approaching within a mile of Seal Harbor on the south and being less than that distance northeast of Northeast Harbor. It is surrounded on all sides by extensive summer colonies.

The Sieur de Monts National Park includes four lakes and no less than 10 small mountains. The lakes are Jordon pond, Eagle lake, Bubble pond, and Sargent Mountain pond.

Mr. Dorr, who is proprietor of the Mt. Desert Nurseries, has worked for years on this project and has expended much time and money to preserve and beautify the tract which now becomes public property forever.

SEED TRADE

AMERICAN SEED TRADE ASSOCIATION

Officers—President, Kirby B. White, Detroit Mich.; First Vice-President, F. W. Bolgiano, Washington, D. C.; Second Vice-President, L. L. Olds, Madison, Wis.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending June 30, 1916, were recorded as follows:

Bulbs—Netherlands, \$61; England, \$10.

Plants—Italy, \$18; England, \$15; Costa Rica, \$16; Guatemala, \$112; Mexico, \$100; Netherlands, \$110.

Red Clover Seed—France, \$5,940; Italy, \$6.

Clover Seed—England, \$7,862.

Grass seed—Ireland, \$146.

Other seeds—France, \$3,744; Italy, \$39; Netherlands, \$106; England, \$10,430; British India, \$4,575; British East Indies, \$3,012; Hongkong, \$234; Dutch Guiana, \$3.

Nitrate of soda—Chile, \$72,479.

Other fertilizers—Mexico, \$639.

Chicago.

D. D. P. Roy, of Chicago, will open a branch seed store at Lake Forest, Ill., August 1st.

W. A. Sutherland of Philadelphia, no longer represents the Leonard Seed Co., in any way. Customers in the east, will be looked after by his successor, whose name will be announced in this paper soon, and who will call upon the trade.

The Leonard Seed Co. has reached the inventory stage of the year's work, as what is considered the duller month of the year is here. President Leonard of the Leonard Seed Co., calls it "fishing season," and will start for the lakes of Wisconsin in a few days. Those who know him best know that the three large places owned by the company in that state will have more attention than the fish at first, but after inspecting the growing crops Mr. Leonard expects to relax and take a needed rest. The company has in all twelve places. The new Leonard's sweet corn, which he introduced three years ago in a limited way, is proving most satisfactory. It is a cross between Country Gentleman and Stowell's Evergreen, of narrow grain and earlier, and packers get a higher price for it in the cans. It is too early now to tell the exact condition of the pea crop. Onion sets are not far enough along to enable one to speak positively, but indications are that the crop will be short.

CATALOGUES RECEIVED.

J. P. Campbell, Jacksonville, Fla.—"Campbell Irrigation." Illustrated catalogue of automatic sprinkler system and outfit.

C. C. Morse & Co. Illustrated Price List of Morse's Early-Flowering Long-Season Spencer Sweet Peas, 1916 crop. Fine portraits of Early Morning Star, Early Song Bird, Early Melody, Early Spring Maid, Early Snow Flake and Early Heather Bell.

John Waterer Sons & Crisp, Bagshot, Surrey, England.—Hardy Plants for 1916. This is a very complete catalogue of the plants offered from the hardy plant nurseries at Turyford, Berks. There are many handsome full-page illustrations. Catalogue of Roses from the same company. This is also a very complete and interesting list, including two pages of new and rare varieties. Other catalogues also received from Messrs. Waterer & Crisp are Autumn and Spring Planting Bulbs, Fruit Trees, etc.; Seeds for Vegetable and Flower Garden; Rhododendrons, Hardy Ornamental Trees and Shrubs. The seed catalogue gives an immense amount of cultural information in tabulated form and is well illustrated. The catalogue of hardy rhododendrons, conifers, etc., as everyone knows, covers one of the best-known specialties of the Waterers.

R. & J. Farquhar & Co., Boston.—Catalogue of New and Rare Plants. This is a publication of very unusual character. So far as we know nothing like it has ever been published in this country. It is devoted entirely to hardy ornamental trees and shrubs and includes many of the most desirable of the Arnold Arboretum novelties which have been described in the Arboretum bulletins and elsewhere from time to time but have not been obtainable commercially. This is especially true of the numerous new trees and shrubs collected in China by E. H. Wilson for the Arboretum. Requests for these plants are constantly made to the Arboretum by persons who see or hear of them and have been unable to find them in any American commercial nursery. At the suggestion of Professor Sargent, Messrs. Farquhar have been engaged for several years in the propagation of these new comers. It was a big undertaking and costly and Messrs. Farquhar have merited the gratitude of all friends of advanced American horticulture.

Alexander Dickson & Sons, Ltd., Newtonards, Ireland, at the recent annual trials of new roses at Bagatelle, near Paris, were awarded the gold medal for the best new rose, the variety being Mrs. Wemyss Quinn.

DURING RECESS.

Florists' Club of Washington .
ENLIST! ENLIST!

Men, women and children, for the big Florists' Family Frolic at Great Falls, Va., Wednesday, July 19. Special trains from 36th and M streets at 2, 2.15 and 2.30 P. M. Bring the folks for a "blooming" good time. Tickets 50 cents. This ticket and the identification tag includes everything and a dip in the Falls. Get yours early as the number is limited to 300. \$100 in prizes. Special prizes for the ladies and the kiddies.

This will be some outing and then some. Fireworks at 8 o'clock P. M. It will not be necessary to walk pigeon-toed when the band plays a pigeon walk.

General Committee: Wm. Ernest, Chairman; Geo. Shaffer, Harry Lewis, O. A. C. Oehmler, A. Schnell, Fm. Marche, Edw. Schmid, Geo. Cooke.

Committee: Wm. Ernest, Chairman Humepatopcharox; Geo. Shaffer, Chairman Arrangements; Geo. Cooke, Chairman African Golf; Wm. Marche, Chairman Currency; Harry Lewis, Chairman Medical and Hospital; Wm. F. Gude, Chairman Preparedness; Edw. Schmid, Chairman Prizes and Chickens; G. Milton Thomas, Chairman Sports; J. J. Barry, Chairman Lost Children; J. Richards, Chairman Refreshments and Ham Inspector; A. Schnell, Chairman Arguments and Disputes; A. Gude, Chairman Mephisto and Fireworks; Dave Bissett, Chairman Lecturer and Guide over Falls.

Pittsburgh Florists' & Gardeners' Club.

The Pittsburgh Florists' & Gardeners' Club have arranged for a field day at Sewickley, Wednesday, July 19. Trains leave Union Station at 9.20 A. M., and Federal street at 9.25 A. M., city time. George Wessenauer and his committee will meet this train at Sewickley and arrange for the transportation to the Sewickley Heights territory and provide for a noonday luncheon to all members of the club that notify him by Monday, July 17. The Sewickley members of the club are anxious to show the boys all the places in that district that can be visited in the short time allotted.

Send your card at once to George Wessenauer, Sewickley, Pa., so that he may provide well for all.

Yours truly,

T. P. LANGHANS, Sec. Pro Tem.

On Thursday, July 6th, the Knoxville Florists' Society held its Third Annual Picnic at Elkmont, a mountain summer resort about seventy miles from Knoxville. A special train carried the party. There was a ball game and other sports and a very enjoyable day was passed by the members and their families.

The Brooklyn Botanic Garden Leaflet (12 pages) dated June 28, 1916, is devoted to a most interesting illustrated paper on "Variation, Environment and the Laws of Heredity," by Orland E. White. The Leaflets are published weekly or bi-weekly, from April to June, and September to October, inclusive, by the Brooklyn (N. Y.) Institute of Arts and Sciences. Current numbers are free to all who wish them; back numbers 5c each.

NEWS ITEMS FROM EVERYWHERE

NEW YORK.

George Hildenbrand, of John Young & Co., has been on the Federal jury for the past three weeks.

It is reported that the joint flower show meeting held at Hotel Manhattan was very harmonious. Organization was completed and dates, etc., arranged for. Secretary John Young was authorized to make public details of the meeting later.

S. A. F. Secretary John Young started for the Convention City on Friday, July 14, going to Dallas, Texas, where he will meet Vice-President Kerr and other Texas florists and will then tour the state with these gentlemen in automobiles in the interest of the society.

J. P. Lewis has been added to the New York Florists' Club's Transportation Committee and will soon issue a circular letter as to rates, etc., for the trip to Houston. It looks now as if quite a number will take advantage

of the boat trip to New Orleans—then all rail to Houston.

The weather is very hot, stock plentiful and no demand. An unusual attraction in the market at present is a fine lot of the new *Lilium myriophyllum* or regal lily, being shipped to John Young & Co., by R. & J. Farquhar & Co., of Boston. These lilies are much admired and will undoubtedly take their place among other suitable flowers for summer use.

ST. LOUIS.

Andon Bourdet, Peter Phaender, Ed. Buechel, W. S. Wells, A. Senger, all well known in trade circles, are off on their summer vacations.

The florists' picnic takes place at Romona park, Thursday, July 20. Everybody is invited. The Florists' Club pays all expenses.

W. J. Pilcher and A. S. Cerny, of Kirkwood, and Frank Windler, W. C. Smith, Aug. Hummert and Al Senger,

all florists, have purchased new automobiles recently.

Werner Bros., of Clayton, Mo., are building two new rose houses, 32x150. Mr. A. Werner says they will have nearly 750,000 feet of glass when these are completed.

Mrs. Ben Westhus has opened a floral store at Skinker and Berlin avenues. The opening took place last week and she started in with a big day's business.

The Florist Club meeting this week, according to Secretary Beneke and President Bourdet, promises 100 in attendance. At the officers' meeting last week an interesting program was mapped out.

The St. Louis Wholesale Cut Flower Co., the new wholesale firm, has leased 1410 Pine street and will start at once to erect a building to be ready for business Sept. 1. D. S. Geddis and J. J. Beneke will manage this new wholesale market.

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

PITTSBURGH.

Mr. and Mrs. Gustav Ludwig expect to attend the Florists' Convention at Houston, Texas.

Mr. and Mrs. J. W. Ludwig are planning a trip to Baltimore, Trenton, New York City, Rochester and Buffalo.

Augustus Frishkorn, manager of Beckert's Seed Store, left last Monday for a trip through West Virginia in the interest of the firm.

H. P. Joslin is visiting his brother at Oxford, Mass., during which time his duties as secretary of the Florists' Club are assumed by T. P. Langhans.

Accompanied by his family, Fred Reigelmaier, of the Pittsburgh Cut Flower Co., is on a motoring trip to Atlantic City. W. T. Usinger is at Ruggles Beach, Ohio, and Samuel Capes is at Atlantic City.

BOSTON.

The Children's Museum on the shores of Jamaica Pond, Jamaica Plain, has offered prizes of \$25 in gold and silver to boys and girls under 17 years of age for collections of leaves of trees and shrubs. The conditions are liberal. They state merely that the leaves must be pressed and mounted on sheets of paper 11½ by 16½ inches. Any paper stiff enough to hold the leaves may be used and several leaves may be mounted on the same sheet. Each leaf must be labelled with name, date and place of collection, and all collections must be deposited in the museum by Sept. 10. Hundreds of New England boys and girls have announced their intention of competing for the prizes and it is expected that an unusually large number of collections will be received.

WASHINGTON.

J. Louis Loose is spending a couple of weeks with Mrs. Loose, at Berkeley

Springs, W. Va., where they are enjoying a very pleasant vacation.

Five employees of Gude Bros. Co. will go to Bisbee, Arizona, with other members of the District of Columbia National Guard. These are Edward Wilson, who is a commissary sergeant; and Privates Edward Henning, Robert Baggott, Norman Padgett and Leslie A. Dix.

George W. Hess, superintendent of the Botanical Gardens, is to have his domain largely increased if Congress follows the recommendations of the Senate Committee which has favorably reported a bill to devote to the use of the gardens what is known as East and West Seaton Parks.

Several florists were among the large number of Elks who have been in convention in Baltimore and who came to Washington to pay a fraternal visit. William F. Gude is the exalted ruler of the Elks in the District of Columbia and as such was called upon to welcome the visitors.

Flower Market Reports

BOSTON like all the other flower centres is doing practically nothing worth dignifying by the name of business. It should not be very long, however, before the tide will begin to turn. The belated hot weather which is now on with a vengeance will start things up at all the beach resorts and should induce flower buying. There is not much in the way of noticeable stock in sight. The sudden heat has affected everything unfavorably and the material offered is far from the standard. There is no set value on anything. The main ambition is to get a customer. Price is a secondary consideration—get all you can but make the sale at all hazards.

CHICAGO Business has fallen off greatly in the past week. Warm weather has sent many flower buyers out of the city and hurried on the out-of-doors blooms, so between them there is a marked decrease in sales. Stock is offered at very low prices to stimulate city trade and even so roses and carnations are accumulating. Were it not for shipping trade it would be much worse, but most wholesalers report out-of-town orders as coming in well for July. Early asters made their appearance this week, rather small and with short stems, but they add another flower to the already overloaded market. Among the novelties are the pink cornflowers, in light and dark shades and very pretty. Roses are causing comment by their good color and so far have retained their fresh bright color of the earlier season. Lilies the abundant. Cattleyas are much more plentiful and quality is good. All kinds of out-door flowers in season are to be had and the cold spring has kept them strong and fresh. Peonies are of the past and no one regrets it. Very low prices on almost all kinds of stock are quoted to the buyer on the spot.

PHILADELPHIA Conditions are fairly good for the season, which is not saying a whole lot. In other words, there is very little business and many more flowers both inside and outside grown than the market can absorb. Carnations have been especially plentiful and they are hard to move as their quality and keeping capacity is at low ebb and most of them might as well have been kept at home. Another conspicuous item is the outdoor gladioli from the South. They are splendid stuff, and a large proportion of that magnificent pink "America" cut with all its foliage. It is a pity to see any of those beautiful things go to waste.

PITTSBURGH Summer conditions are here after an exceptionally prosperous early season. Each day sees a fresh supply of flowers, those of the previous morning more than supplying the demand for the day. Asters are once more on the market and the supply of gladioli—of very fine quality—is daily increasing. Carnations and roses are still coming in plentifully, while lilies of the valley and sweet peas are falling off. Cattleyas of fine quality are in generous supply.

GLADIOLI

Splendid quality, long well flowered spikes, grown for cut flowers, much superior to those grown for the bulbs and cut short without foliage. Good assortment.

\$4 per 100, \$25 per 1000

CATTELYAS

\$5.00 and \$6.00 per dozen

VALLEY

\$5.00 and \$6.00 per 100

During July and August, closing time daily
5 P. M. Saturday 1 P. M.

ST. LOUIS The wholesale market is very dull and stock of all kinds is extremely poor. The only good seller now is gladioli. These are coming daily in large lots from our local growers. America, King and Augusta are in best demand. Pink Beauty, too, has a large call. Roses come in poor and the bulk of them are sold very cheap. Carnations and sweet peas sell well and big lots come in daily. Lily of the valley still has a good call and lilies have daily demand.

WASHINGTON With very hot weather at hand the usual summer conditions are prevailing. There has been a decrease in the quantity of stock coming in but there is enough and more to supply all demands. There has not yet come the heavy slump and large supply that causes the employment of wagons to carry unsalable flowers to the ash heap. Funeral work has been heavy and has used up a great deal of stock. The exchanges are now observing summer hours and are closing early. Dahlias are among the new arrivals and look good. Glad-

lioli are more plentiful and the price has dropped. There are some very good roses obtainable, but the carnations offered are too small to be of value. The demand for lily of the valley has decreased.

EARLY CLOSING IS POPULAR

HORTICULTURE Publishing Co.,
Gentlemen:—I note by a copy of HORTICULTURE just received that a great deal of mention is made about early closing during the summer months. It might be of interest to you to know that we are following our plan of last year and at our Philadelphia office we will be closed all day Saturday during July and August.

HOWARD M. EARL,
Manager, W. Atlee Burpee & Co., Philadelphia.

Editor HORTICULTURE,
Dear Sir:—I highly agree with you about the early closing in July and August, 5 o'clock week days and 2 P. M. Saturdays and 3 P. M. Wednesdays.

HENRY R. COMLEY
Boston.

CHICAGO.

The condition of John Poehlmann, president of the Poehlmann Bros. Co., is extremely serious.

H. Schiller, of Schiller's North Store, is enjoying the beauties of National Park, Montana, with a hiking party.

August Lange is just waiting for the summer lull in business before he starts for Mt. Clements and the baths.

Ed. Vilter, with Zech & Mann, has the sympathy of the trade in the loss of his mother whose funeral took place last Tuesday.

Mr. and Mrs. Chas. Moravek, 3220 Ogden avenue, left Saturday for a trip to Yellowstone Park. They expect to be gone two weeks.

C. W. McKellar, whose continual ill health is regretted by his many friends, is spending most of his time resting at his home in Niles Center.

Geo. Asmus and family are touring the East in an auto. They will stop at all the principal cities but longest at their home town Buffalo and in New York.

Mrs. J. Simpson reports a good business at both stores during the spring and does not regret the quiet to be expected in July. Week-end motor trips are taken in preference to one more extended and are found even more restful.

Mr. and Mrs. H. C. Wulbraudt will indulge in an extended vacation, visiting their pecan orchard in Georgia where they will erect a cottage. They will probably take in the convention at Houston. After this the Yellowstone Park and a visit in Lincoln, Neb., will complete their time of recreation.

A number of promising young florists from "down state" are spending a few days here. They were all out to Poehlmann Bros. at Morton Grove, Tuesday. Among them were Ray J. Dills, now with N. Bommersback, Decatur, Ill. After leaving Chicago he will visit his brother-in-law, F. H. Meier, a wholesale and retail florist at Vandalia, Ill.

Frank Oerhslin is building an addition to his Harlem avenue greenhouses recently purchased, consisting of four houses, 19 x 150 feet, and a service shed, 20 x 76 feet, besides making considerable improvement in the houses now on the place. When completed this place will make a fine addition to his already large establishment.

Iles Cole, of Springfield, Ill., is getting new ideas by calling on the trade while spending his vacation here. Mr. Cole was formerly with Gullett & Son, but two years ago started into business for himself at the state's capital, where the store has already been rebuilt and made up to date with new fixtures. Mr. Cole is a rising young man who seems to be making good in the business.

The colonial style of brides' bouquet still holds first place here, made with either all lily of the valley or with lily of the valley and roses or sweet peas, and without shower. Miss Schiller, whose skill is often the envy of her friends, uses several rows of maline as a background and none of the usual paper accessories. For the bridesmaids the conventional pink roses are supplanted by Ophelia with blue maline.

Philip Daut, of Daut Bros., Decatur,

Everywhere, U. S. A.

Dear Sir: It will be a decided advantage as regards prices and quality to place your order with us.

Soliciting your order through this ad cuts down the overhead selling expenses and you positively get lower prices and better quality. Our terms are liberal and are a guarantee that you get a square deal, all bulbs guaranteed true to name or money refunded.

Write us and upon request we will mail you our booklet giving prices f. o. b. New York or Chicago, and we also cheerfully furnish you with any information that may be desired. Those of our friends who will mail us a list of their requirements will find it has paid them to do so.

Awaiting to hear from you at your pleasure, we remain,
Yours very truly,
Westerbeek & Klyn,

NEW BOOK
JUST ISSUED
Plant Propagation Greenhouse and Nursery Practice

By M. G. KAINS

So many discoveries of new facts by plant investigators, shortcuts and "wrinkles" worked out by plant propagators, and nursery, greenhouse and garden methods simplified or made more effective, have made books hitherto available on plant propagation out of date.

There has also been an insistent call for a volume that would not only include the character of information wanted by nurserymen and other plant propagators, but also discuss the subject of plant propagation from the standpoint of fundamental principles, and include the latest conclusions advanced by investigators throughout the world.

This new book by Professor Kains will appeal with equal force to the amateur, the professional propagator, and the teacher in agricultural colleges and schools.

The book devotes many pages to special plant lists and condensed directions for propagation of vegetables, fruits, annual and perennial flowers, bulbs, ferns, orchids, cacti, evergreens, deciduous trees and shrubs, vines, water plants, greenhouse and house plants and palms.

The table of contents includes: An introduction on general principles, germination, seed testing, potting, layerage, bottom heat, cuttage, classes of cuttings, graftage, and theories and laws, Daniel's experiments in graftage, tree stocks and scion handling, grafting waxes and wound dressing, methods of grafting considered individually, budding methods, nursery management, and laws affecting nursery stock.

Illustrated. 5½x7½ inches. 342 pages. Cloth. Price, net, \$1.50.

THE PEONY

Paper Read Before The Lancaster County Florist Club by B. F. Farr.

Every one loves the Peony. They that can recall the enthusiasm of their grandmothers over the old garden "Pineys" may well imagine the raptures if those old people were brought in contact with the splendid Peonies of today. The old fashioned Piney, Peony officinalis, a native of Southern Europe, is rich in color, but of small size, fleeting duration and offensive odor. The early history of this Peony extends back many centuries intricately woven with a haze of superstition, allegory and myth.

Moutan Peonies

In China, it is said, the tree peony has been their chief pride and glory for 1,400 years, prized by their emperors for the beauty and fragrance of their flowers and for more than a thousand years records of the new introductions, their characters, qualities and parentage have been kept. The Japanese, too, have been largely instrumental in producing our finest varieties of tree peonies, of which there are now a dozen or more choice varieties in all colors offered for sale. The blooms are large and keep well either on the plant or when cut and placed in water. They should be grown more extensively. They can be propagated from soft wood cuttings but because of their slow growth they are usually grafted. Great care must be taken that shoots do not develop from the roots when grafted plants are used, lest the variety be lost and a wild variety taking its place.

P. albiflora

From B. H. Farr's superb catalogue we learn that the popular peony of today has only been cultivated in Europe a little more than a half century. It is descended from *Paeonia albiflora*, a native of Siberia. The modern peony is an aristocrat whose birth was among the nobility of France, for it was under the care of M. Jacques, gardener for King Louis Philippe, that some of the first of the fine varieties of today were originated. There were also Comte de Cussy, the Prince De Salm Dyck and Modeste Guerin, all enthusiastic amateurs, who secured the best varieties from Japan and China about the middle of the last century, and from these began to raise seedlings that have given us some of our present magnificent varieties. M. Jacques' collection was inherited by his nephew, M. Victor Verdier, who raised a number of fine seedlings. Comte De Cussy's collection was inherited by M. Calot, which later passed into the hands of M. Crousse. The Calot-Crousse varieties are noted for their uniform high quality, raising the standard of excellence that has never been surpassed. Another enthusiastic French amateur

was M. Mechin, whose grandson, M. A. Dessert, succeeds him and is considered one of the greatest living authorities on peonies.

England has also given us many new varieties the past twenty years. The Kelways have been the largest introducers. Unfortunately in many instances the varieties sent us under English names were duplicates of the French varieties. In America three amateurs have been especially prominent in the production of new peonies, as follows: John Richardson of Dorchester, Mass.; H. A. Terry of Crescent, Iowa, and George H. Hollis of South Weymouth, Mass.

Propagation

In the propagation of peonies or the raising of seedlings there is no road to quick results. It takes four to six years before blooms may be had from seed and, from thousands of seedlings, less than one per cent. will justify introduction as a new variety. It takes many more years to increase the stock by the slow process of division sufficiently to be able to offer it to the trade. The plants may be divided by three every three or four years. Is it any wonder good new varieties are listed from \$5.00 to \$25.00 each? New varieties are mostly introduced by amateurs. The professional florist or nurseryman can scarcely afford to wait so long for results, except where they have been raised for the love for something new and the fascination of watching them grow, which too often is not the chief incentive of the American florist.

From this sketch of the modern peony and those whom were foremost in their introduction, you will realize how nearly all of the choice varieties now in commerce were given to us by a few enthusiasts who were inspired by the beauty of the flower to which they gave their devotion.

Confusion of Names

It is to be regretted that in this great collection of peonies contributed from nearly all over the world, containing nearly 3,000 names, there are less than 300 distinct varieties, the other names all being duplicates or inferior varieties that cannot be traced to any known origin. The nomenclature committee working under the American Peony Society was formed for the purpose of trying to straighten out this mess and they are succeeding admirably well. For instance—*Edulis Supurba*, that beautiful, fragrant variety, almost ninety years old, nearly always in bloom for Decoration Day, was masquerading under some thirty different names.

For twenty-three successive Junes I have studied and lived among peonies, but a hundred years is far too short to know them as I would wish. A glance through the various catalogues of today proves that varieties introduced 100 or more years ago are still among the rarest and high priced sorts, due to their slow multiplication and strong demand.

Culture

Peonies may be planted any time from August until late in the fall or early spring. September is the best time, however, as they will make a root growth before winter sets in and they will bloom the following spring. Not until the third year after they are planted will they produce perfect flowers. They require less care after being planted than other flowers. They will grow and thrive for years without being disturbed. I have had them grow without any care whatever, but they will abundantly repay good care and nourishment. They should be planted $3\frac{1}{2}$ to 4 feet apart in good garden soil and mulched with manure in the fall.

Uses of the Peony

There was a time when the peony was only a common "Piney." There are common ones today, but the better varieties are more in demand every year. They have no competition. No other flower can take their place. They may be used in excellent taste among shrubbery or among other hardy perennials, as single clumps or large beds in the lawn, bordering drives or broad landscape effects, thriving everywhere whether in full sun or partial shade. As a cut flower nothing is more suitable for weddings, church decorations and social functions in peony season. Without the peony we would be at a great loss on Memorial Day, just as we would be without chrysanthemums at Thanksgiving.

Every florist and amateur should plant more peonies. The larger the collection the better. Secure a collection of 100 or more varieties and you will find in them more real pleasure and satisfaction than you can buy any other way for the small expense involved, saying nothing of the joy and inspiration others will derive from them, and at the same time encourage the use of more flowers. The peony will never displace other flowers regardless how popular it may become any more than a physician can displace the florist. The public wants a larger variety of flowers, frees, shrubbery, perennials, etc. Every retail florist will bear me out in this assertion.

Some of the Best Varieties

I will endeavor to name a few of the most popular varieties with which I am familiar. Red and crimson: M. Martin Cahuzac, Cherry Hill, Plutarch, Adolphe Rosseau, De Candolle, Rubra Superba, Mme. Bucuet, Edouard Andre, Atro-anginea, Geo. Washington, Liberty. Pink and rose varieties: Claire Dubois, Mme. Bollet, M. Jules Elie, Lamartine, Eugene Verdier, Gloire de Gombault, Lady Beresford, Lady Lenora Barmwell, Georgianna Shaylor, Alexandra Dumas, Albert Crousse, Cameron, La Coquette, Wilhelmina, Souv. de L'Exposition de Lille, Princess Beatrice, *Edulis Supurba*, Felix Crousse. White and delicate tinted varieties: Festiva Maxima, Couronne d'Or, Duchess de Nemours, Albatre, Duc de Wellington, La Tulipe, Mme. Calot, Mme. Crousse, Mme. Emile Lemoine, Queen Victoria, Solfatara, Golden Harvest, Marie Lemoine. Most of the above varieties are suitable for cut flowers and a portion will bloom early, midseason and late.

PINO-LYPTOL

WEED KILLER

THE VERY NEWEST AND QUICKEST METHOD OF DESTROYING WEEDS, GRASS AND OTHER GROWTH IN GARDEN WALKS, GUTTERS, TENNIS COURTS, DRIVEWAYS, ETC.

This fluid absolutely destroys all weeds and other growth wherever applied, and its effect on the ground prevents the growth of fresh ones for a year and thus saves a great deal of time and labor, as no cutting, hoeing or hauling away of the weeds is required.

We manufacture the strongest line of DISINFECTANTS on the market.

Obituary

George E. Morris.

George E. Morris, reputed to be the greatest authority on mushrooms in Massachusetts, died at the Waltham Hospital on July 5, aged 62 years. Mr. Morris was an enthusiastic botanist as well as mycologist. He is said to have painted no less than 5000 water color studies of flowers, plants and mushrooms.

A. E. Simons.

A. E. Simons, for forty-eight years a well known florist in New Orleans, La., died Sunday morning, July 2, following two years of ill health. Mr. Simons was born August 11, 1858, in Cologne, Germany. When ten years old he came to New Orleans. Later he was affiliated with R. Maitre, a florist, and until eight years ago he personally directed this florist establishment at 2026 Magazine street. Since then he was superintendent of the Metairie Ridge Nursery. He was a member of the German Gardeners' Club. He is survived by his widow and four daughters.

William Tricker

This well-known florist and aquatic plant expert died suddenly of heart disease at 10 A. M. on Tuesday, July 11, while at work in his greenhouses at Arlington, N. J. Mr. Tricker was a large man physically, and apparently enjoyed the best of health. When he left the house on Tuesday morning he joked with his wife and went away smiling. His son, Charles, was in the greenhouse when he died. Dr. A. A. Mutter of Arlington was summoned and pronounced death due to heart disease.

Mr. Tricker was born in Ipswich, England, sixty-four years ago. He came to this country in 1886 and had been a resident of Arlington nearly ten years. He made a specialty of growing aquatic plants, especially nymphaeas, of which he raised a number of fine varieties. He was an exhibitor at all the large shows throughout the country and was the winner of many prizes. He was a member of the S. A. F. and the N. Y. Florists' Club.

Surviving are his widow and six children, Mrs. William Seymour of West End, Mrs. J. M. Coddington of Reverton, William E. of St. Louis, Mo., Rupert of Pensauken and Charles and Miss Florence Tricker of Arlington.

The news of Mr. Tricker's death will bring widespread sorrow all through the trade. He was universally liked.

CUTTING GLADIOLUS SPIKES.

It is generally known that in order to encourage growth of corms and cormels it is not well to allow the flowers to remain for seeds to mature, nor is it well when cutting the flower-spikes to cut so low down as to remove most of the foliage. The generally approved procedure is to cut the spike when the first flower is opened, not cutting away more than the upper pair of leaves, if indeed any leaves are cut.

Last year I thought I would see what difference would result if I went beyond the orthodox plan. In five rows of Pendletons I proceeded as usual, cutting the spikes when the first bloom opened; all but the middle row. In that row I pinched out the buds just as soon as they appeared, so that the strength that would have been used in maturing the buds might be diverted into greater root-growth. I waited with much interest the time for digging, wondering whether I should find the greater gain in corms or cormels. To my surprise there was no perceptible difference between that row and the others, so that at least in that case there was the loss of the flowers and no gain in either corms or cormels.

Possibly this mention may save some one else from repeating a foolish practice.—C. C. MILLER, in *The Modern Gladiolus Grower*.

A USEFUL BOOK

The publishers have gotten out a new edition of "Trees, Shrubs, Vines and Herbaceous Perennials" by Kirk-egaard, Fernald and White. The book is greatly appreciated as a text-book in the State agricultural colleges and experiment stations. And it is still "absolutely the only book of its kind on the market" as Professor Nehrling says. We can supply copies at \$1.50, expressage prepaid.

The Recognized Standard Insecticide. A spray remedy for green, black, white fly, thrips and soft scale.

Quart, \$1.00; Gallon, \$4.50.

NIKOTIANA

A 12% nicotine solution properly diluted for fumigating or vaporizing.

Quart, \$1.50; Gallon, \$4.50.

Until further notice shipments on our products FUNGINE, VERMINE and SOA-LINE will be subject to conditions of the chemical market.

Prompt shipments can be guaranteed on APHINE and NIKOTIANA.

DESTRUCTIVE STORMS.

Eastern New England towns have suffered much damage from the recent furious rain storms often accompanied by lightning and occasionally by hail stones. On the afternoon of July 3 a storm of exceptional violence visited Eastern Massachusetts. C. J. McGregor had over 300 lights of glass broken by the hail. All florists in Lynn sustained more or less damage, William Miller's range having much broken glass. At Concord, N. H., two days previous, Donald McLeod had his houses badly wrecked by hail stones. Colby's green-

houses are also reported as suffering considerably from broken glass. Field crops were laid waste, garden shrubs and flowers beaten to pieces and trees uprooted in many places.

**NON-KINK WOVEN HOSE**

In any length (one piece) with couplings, 14c. per foot. Unequalled at the price. Remnants, shorter than 50 feet, 10c. per foot, with couplings.

HOSE VALVE—70c.

All brass except the hand wheel. Has a removable leather disk which is easily replaced to keep water tight. Stuffing box prevents leaks at stem.

"METROPOLITAN"

The Sign of Superiority

The success of your greenhouse depends largely upon the results previously shown by the builder you employ.

Therefore, every grower should investigate the capabilities of the greenhouse builder he selects for the job.

The above full iron frame, patented curved eave Metropolitan greenhouse was erected by us for Mr. W. W. Fuller, at Briar Cliff Manor, N. Y. This house is 26 x 100 feet, with an absolutely water proof cement boiler cellar. It is divided into three compartments which are separately heated and ventilated, and, being glazed with 24 x 24 inch glass, is extremely light. We also did the masonry.

A Recent Heating Happening Of Interest to Superintendents and Gardeners

A COUPLE or so weeks ago, our New York manager was summoned hurriedly to the 'phone at the urgent call of the Superintendent of a big Long Island estate where we were erecting the group of houses shown in this plan. In arranging the heat, in accordance with our present custom, we had planned to double valve all center coils and single valve all side coils, all of the houses except the passage house being 25' in width. Before preparing specifications for this work, the Superintendent impressed upon us the importance of so valving the coils, that he could get reasonable control of the temperature in each compartment. We arranged the valving with that in mind.

While our men were at work, he observed some coils with single valves on them, and asked our men if he could expect to get control of the temperature with single valves. Our erection heating men, not knowing of the conditions, told him "of course he could not; it was necessary to have two valves on coils to get control of temperatures."

Over the 'phone he asked us "how it was that the heating was not being installed to permit of positive control in the various compartments." We told him that as we understood the case, he was really more concerned about getting results, than he was in the methods we might employ to secure them for him. He admitted this was the case. Then we explained to him that in order to give him a positive control of each coil, it would be necessary to have each coil supplied from a separate main, which as he could easily imagine, would mean quite a complicated heating system, to say nothing of the expense. We further explained that it was not our custom nowadays to lay out a range of greenhouses without the plan being passed on by men who were experts in the requirements of plants. Also that

while some years ago it would not have been a strange thing to find a chrysanthemum house sandwiched between a forcing and carnation house, instead of occupying the outside end compartment, as is the case in this plan, this could not occur with us today.

In laying out a range of this character we first determine, as far as possible, the class of plants to be provided for and then arrange the compartments accordingly, placing the warmest house nearest the boiler; those requiring maximum sunlight where they will not be exposed to shadows; cool house where heat can be controlled most conveniently, and in the case of the 25' house to double valve all center coils, thereby making it possible to reduce the temperature 10 degrees below that specified for that compartment. Owing to the limited amount of radiation required to maintain the desired temperature for this class of plants, the heat in the chrysanthemum house was arranged so all coils were under the side benches, leaving the space under the two center benches available for storage of semi-dormant plants or bulbs. Double valving the side coils makes it possible in the Fall of the year, when "mums" need to be kept cool and other houses require heat, to eliminate all heat in this compartment. When our friend realized he could control his temperature within 10 degrees, he expressed himself as entirely

satisfied with our system of valving. He declared he "had no idea that greenhouse people so studied the gardener's conveniences or the plants' requirements." He "had always imagined they had a cut and dried way of arranging their work, leaving it to the unfortunate gardener to do the best he could with the houses."

Now, no doubt, you are wondering where this Long Island estate is and who the Superintendent and Gardener are. We would be very glad to tell you, if you will only let us know you want to know.

Both the flow and return pipes are valved. Note Vent gear above pipes.

Boddington's Re-selected Winter-flowering Spencers as grown by Wm. Sim, Cliftondale, Mass.

Boddington's Winter-Flowering Spencer Sweet Peas

The New Sensational Australian Spencer Winter-Flowering Sweet Peas

The following varieties are, without doubt, the greatest and most valuable novelties introduced since the famous Yarrawa Spencer marked the commencement of a new era in Winter Sweet Peas.

NOW READY FOR DELIVERY

CONCORD DAYBREAK
Cream with standard heavily edged buff pink.

CONCORD CHARM
Delicate shades of white and blue white wings and very light heliotrope standard.

CONCORD COUNTESS
Most attractive tint of pink.

CONCORD COQUETTE
Mottled light rosy carmine.

CONCORD EMPEROR
A rich crimson red variety.

CONCORD PURPLE
Mauve purple, changing to purple blue.

CONCORD RADIANCE
A very striking shade of rosy magenta.

CONCORD WINSOME
Delightful shade of pink, tinted lavender.

COERULEA
Delicate sky-blue.

RUBY
A glowing light crimson scarlet color.

SALMONEA
A deep rosy salmon variety of great merit.

Prices on all the foregoing Pkt. (18 seeds) 35 cts.; 5 pkts. \$1.50.

Yarrawa

Bright rose-pink, with light wings. Seed sown early in September will flower about December 1, and bloom profusely and continuously until May. They are borne usually in fours on extra-long, strong stems. Awarded Certificate of Merit, International Flower Show, New York, 1914, and the Pennsylvania Horticultural Society, March, 1915.

New Early Flowering Giant Pansies

Or Winter Blooming

An entirely new and distinct strain of Pansies. The main advantage of these new Pansies over all hitherto existing Pansies is the extreme earliness of flowering and its unusual hardiness, which enables them to withstand quite severe Winters, and to bloom right on into the Summer. Sown at the same time as other Pansies, they begin flowering the early part of March or as soon as the snow is off the ground, many times having four or five large flowers to a plant, when all other Pansies are only showing buds. The flowers are large, well formed and fragrant. They are highly recommended for Autumn planting on graves, and for very early bedding, as well as for early cut flowers.

14. **WINTER SUN.** Golden yellow with dark eye.
15. **ICE KING.** Silvery white with dark blue eye.
16. **CELESTIAL QUEEN.** Light or sky blue.
17. **CHARM OF MARCH.** Dark velvety blue.
18. **MIXED.** The above four colors with other shades and variations.

Each color separate or mixed.

500 seeds 50c., 1000 seeds \$1.00, 1/8 oz. \$2.00, 1/4 oz. \$3.75, 1 oz. \$15.00.

For list and price of other Kenilworth Pansy Seed see my ad of July 8.

FREE OFFER RAINBOW is a mixture of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every \$1.00 worth of Pansy seed I will send, free, 1000 seeds of Rainbow and with other amounts in like proportion.

Chas. Frost

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—Pope.

Antirrhinums

Plants that were propagated early and are now in 4-inch pots will make a fine crop for the Christmas trade if planted out in a bench now. Use a tolerably rich soil, such as would grow good carnations, and set them twelve inches apart each way. They are sometimes planted 8x8 and 10x10, but if you want to give the plants justice allow them the wider distance. Be careful not to plant too deeply, and give a good watering around each plant. On hot sunny days light sprayings overhead will prevent wilting and prove beneficial. Air the house freely. It will be found that pink is far the best selling color; next to this, white and yellow. The scarlet, crimson and variegated shades have only a limited number of admirers. Of course, no set minimum temperature can be maintained for a while, but in winter 45 to 48 degrees should not be exceeded at night.

Beds of Adiantums

Beds of this fern that have been cut from and are now in a denuded condition will require but very little water until the new fronds begin to show numerously. Give them sufficient shade so they will not burn or lose their color. When you have a fine crop of fronds be very careful during cloudy or chilly weather not to water too much. It is safer to allow the soil to become rather dry and keep the surface well stirred so as not to endanger the crop of fronds. They will be greatly benefited by a mulch of from a half to an inch of two parts of cow manure that is well rotted to one of good loam. The crowns soon work above the surface and require a top dressing after each crop.

Chrysanthemums

Give plenty of fresh air day and night with an abundance of moisture, maintained by watering the soil, syringing the plants several times daily and by wetting down walks, which induces congenial humidity throughout the house. Keep up a diligent fight against the black aphid. Plants that are destined to figure in the exhibitions should have their last shift before the close of this month. A good compost is—to one ordinary cart load of rose soil that contains at least one-third of cow manure add from one-third bushels of pulverized sheep manure, half a bushel of soot and about sixty pounds of fine ground bone, thoroughly mixed. This will produce leaves, stems and flowers full of vigor. In

potting be very careful to have the drainage perfect for without it you cannot have good growth.

Orchids

Phalaenopsis comes from a much warmer part of the globe than cattleyas and enjoys a warm, moist atmosphere, but air, especially from the bottom, should always be afforded with the temperature over 72 degrees. Avoid dry atmosphere and there will be practical freedom from the attacks of spider and thrips. As these handsome orchids pass out of flower, rebasketing or repanning will need attention. If they are grown in deep, cylindrical baskets and the wood is much covered with active roots they are sure to be injured. A far better plan is to place the receptacles in larger ones, filling up any intervening space with crock and charcoal and covering the surface with growing sphagnum. These orchids like plenty of moisture, so keep the air charged with plenty of moisture by several dampings down.

Rambler Roses

Copious watering and daily heavy syringing must be given the rambler roses. We often get our hottest weather at the end of July, and if the tender and unripened shoots of these roses suffer for water mildew will set in which much weakens the growth and the strength of the eyes which will now be forming. Crimson Rambler and other ramblers want watchful care just now. That is, those grown in pots under glass during summer. We then have canes and eyes that are bound to give a truss of bloom at every eye. By plunging the pots in a bench where there is some soil they will retain the moisture better. By the end of August they will have made all the growth desirable and can be stood outdoors to ripen up their wood. See that they have plenty of room so the sun will reach through them. Give a good syringing early in the morning and right after dinner.

Reminders

Stake or otherwise support dahlias where necessary.

Remove annuals from the herbaceous border as fast as they go out of flower.

Lift montbretias now so as not to disturb in the fall when they are making their useful roots.

All flowering shrubs, such as Althea, Deutzia, Exochorda, Hydrangea, Spiraea, Viburnum, Weigela, etc., can now be freely propagated from cuttings of semi-ripened wood.

Next Week:—Callas; Care of Gardenias; Cinerarias; French Bulbs; Harlequin Lilies; Reminders.

Prize schedule misunderstandings

Perhaps it will never be possible to so word a prize schedule that the donor of a premium, the intending exhibitor, the manager, and the judges, shall all interpret its requirements and its restrictions in exactly the same way. Yet it is very

desirable that we should always aim to make the wording of these documents so explicit that nothing is left to conjecture and no trace of vagueness or ambiguity can be found from beginning to end. We have often called attention to this subject because we cannot remember ever having seen a prize schedule of any considerable size in which flaws did not crop out somewhere and the schedule for the sweet pea show at Bar Harbor last week was no exception. Judges have no option, but must rigidly adhere to the prescribed conditions—as they understand them, not as they are understood by others—and when it happens that the exhibitor has read them differently the judges have no alternative but disqualification, and this means great disappointment always and resentment sometimes.

The danger in changing show dates

The American Sweet Pea Society has acted wisely in adopting the rule that the date for its annual exhibition after having been once decided upon and arranged for shall stand, regardless of the condition of the crop due to weather or other conditions in any particular section of the country. As a national organization looking for exhibits from localities widely separated and diverse as to climatic conditions they cannot afford to juggle with exhibition dates when same have been generally announced, to accommodate the growers in any particular locality as in doing so there is always the liability of appearing to discriminate against exhibitors from some other section, or even some individual exhibitors in the same locality, where everything is in readiness at the date originally specified and postponement would be an injustice. With affairs of only local scope the shifting of show dates to meet the requirements of exhibitors may be excusable but with a national organization drawing its support from exhibitors widely scattered and working under varying climatic conditions there is always the danger of unfairness to someone when a show date is changed at the last moment, and the resultant disappointment and the unfriendliness thus engendered may not be easily overcome.

Forearmed for emergencies

Edwin Jenkins in his remarks at the Bar Harbor banquet last Saturday night touched upon a subject which, possibly more than any other one factor affects the future of special sweet pea exhibitions. He intimated in a most positive and unequivocal manner that in his opinion the limitations and contingencies which have so often been charged by growers as responsible for their crop failures are really avoidable and that the weather pranks and vicissitudes which have at times wrecked the expectations of intending exhibitors are not so formidable that they can not usually be overcome. Mr. Jenkins has so often walked up smiling and successful with the goods, when other growers have fallen by the wayside, that a good measure of plausibility must be conceded to what he has so publicly claimed. If, as he declares, and seems to have demonstrated, a certain amount of judicious protection and attentive care on critical occasions is all that is necessary for the saving of a crop of exhibition sweet peas, then the disappointed grower's claim on our sympathy becomes very weak and the less he has to say about his failure the better for him. The gist of Mr. Jenkins' theory as applied to sweet pea exhibiting is that "where there's a will there's a way." Who will dispute him? HORTICULTURE'S columns are open always for the discussion of a topic so important.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Thirty Second Annual Convention, Convention Hall, City Auditorium, Houston, Texas, August 15, 16, 17, 18, 1916

Secretary's Address After July 15, 1001 Main Street, Houston, Texas.

OFFICERS FOR 1916.

President—Daniel MacRorie, San Francisco, Cal.

Vice-President—R. C. Kerr, Houston, Tex.

Secretary—John Young, New York, N. Y.

Treasurer—J. J. Hess, Omaha, Neb.

Directors.

Appointed—J. J. Hess, Omaha, Neb.; J. A. Peterson, Cincinnati, O.; William R. Nicholson, Framingham, Mass.; W. J. Keimel, Elmhurst, Ill.; Angelo J. Rossi, San Francisco, Cal.; Charles L. Baum, Knoxville, Tenn.; Washington Representative, Wm. F. Gude, Washington, D. C.

Under affiliation to serve one year—S. S. Pennock, president American Rose Society; Joseph H. Hill, president American Carnation Society; Irwin Bertermann, president Florists' Telegraph Delivery; Henry Weston, president New York Florists' Club; George Burton, president Florists' Club of Philadelphia; Eric James, president Pacific Coast Horticultural Society; E. G. Hill, president Florists' Hall Association of America; Alex. Henderson, president Chicago Florists' Club; Ex-Officio, Patrick Welch, Boston, Mass.

National Flower Show Committee.

George Asmus, chairman, Chicago, Ill.; Thomas Roland, Nahant, Mass.; Chas. H. Totty, Madison, N. J.; Adolph Farenwald, Roslyn, Pa.; Wm. P. Craig, Philadelphia, Pa.; Patrick Welch, Boston, Mass.

TEXAS ADVISORY COMMITTEE—R. C. Kerr, chairman, Houston; Henry Greve, Dallas; L. J. Tackett, Fort Worth; Chris. Houser, San Antonio; Louis Oesch, Dallas; F. W. Hensel, College Station; T. J. Wolfe, Waco; J. E. McAdam, Fort Worth; H. O. Hannah, Sherman; Bird Forrest, Waxahachie; E. E. Stone, Dickinson.

Judges for the trade exhibition to be appointed later. Judges for the Convention Garden to be appointed later.

*Deceased.

PROGRAM.

First Day, Tuesday, August 15.

2.00 P. M.—Opening Exercises in Convention Hall; Convention called to Order by Vice-President R. C. Kerr; Invocation, Rev. W. S. Jacobs; Address of Welcome, Hon. Ben Campbell, Mayor of Houston; Response, Angelo J. Rossi; President Daniel MacRorie's Address; Reading Minutes of Executive Board; Report of Secretary; Report of Treasurer; Report of Washington Representative; Reports of Committees; Reports of State Vice-Presidents.

Action on Proposed Amendments to Constitution and By-Laws.

Amendment No 1 provides for the selection of meeting place two years in advance. Nos. 2 and 3 provide for the election of two directors annually instead of their appointment by the president.

No. 4 regulates the admission of representation from affiliating societies to the Executive Board.

No. 4 regulates the appointment of Washington representative.

No. 5 provides rules for the conduct of the balloting at annual elections.

Nos. 7 and 8 are automatic changes in harmony with the foregoing.

No. 9 provides for standing committee on convention garden.

No. 10 relates to the appointment and duties of the publicity committee.

No. 11 relates to the appointment and duties of the committee on American horticultural products.

No. 12 gives the executive committee power to change date of annual meeting.

Consideration of invitations for next place of meeting or places of meetings if the amendment to by-laws is adopted.

Evening Session—August 15th.

8.30 P. M. Balloting for meeting place for 1917 and also for 1918 if amendment is adopted. Voting takes place at Rice Hotel.

8.30 P. M. Reception to President MacRorie at the Rice Hotel. Music; dancing; refreshments. Strictly informal.

Second Day, Wednesday, August 16—Morning Session.

9 A. M. Annual meeting of The Ladies' Society of American Florists, and visit to the market and shopping district.

Friday Morning, August 18.

BUYERS' DAY." Spend the morning among the Trade Exhibits and Con-

vention Garden. Bowling Party for Gentlemen at Turner Hall.

Friday Afternoon.

Leave 2 P. M. for Galveston by Interurban, special cars. Dip in the surf. Dinner at the Hotel Galvez at 8 P. M. Special cars return to Houston 11 P. M.

NEW YORK TO HOUSTON.

The transportation committee of the New York Florists' Club has selected the following route for those who intend to attend the S. A. F. Convention in Houston, from August 15 to 18:

The S. S. "Momus" will leave New York on Wednesday, August 9, arriving at New Orleans on Monday, August 14, whence the journey to Houston by train, the Sunset Limited, is only 11 hours. The rate will be \$80 to \$83 for the round trip from New York City to Houston, which covers the trip by steamer to New Orleans, train to Houston, then by all rail returning. Those who desire may also return by boat. The rate includes berth and meals on steamer, but not on trains.

As this is evidently the route favored by most of those who intend to go, it is hoped that all members of the New York Florists' Club and friends from the eastern section of the country will travel in this party.

The transportation committee is composed of Chas. H. Totty, chairman, John Young, Wm. C. Rickards, Jr., and J. R. Lewis.

As the steamship traffic on this line is heavy at this season, it is necessary that all reservations be made well before August 1. Make your reservations at once if possible. Further information will be gladly furnished by J. R. Lewis, Secretary, Transportation Committee.

CHICAGO TO HOUSTON.

Greatly Reduced Round-Trip Rates.

After showing considerable lack of interest in the coming convention of the Society of American Florists, the railroad organizations identified with transportation between Chicago, St. Louis, Kansas City, and Houston, have awakened and at the last moment given our National Society the consideration to which it is entitled, granting greatly reduced round-trip rates to the Convention City as follows:

Chicago to Houston and return..... \$46.65
St. Louis to Houston and return..... 31.65
Kansas City to Houston and return... 32.00

The Chicago party occupying special cars will leave via the Wabash Midnight Banner Express at 11.55 P. M., Sunday, August 15, and arrive in St. Louis at 7.40 Monday morning. The special cars will be attached to the Iron Mountain Texas Limited, leaving at nine o'clock due Houston, Tuesday, August 15, at 2 P. M., in time for the opening session.

Round trip tickets from Chicago going August 12th or 13th, are good for 25 days. The charges for Pullman sleepers from Chicago are as follows: Double lower berth, \$6.75; upper berth, \$5.40, drawing room, \$24.

For further details, Pullman reservations, and other particulars, address H. L. Purdy, care of Wabash Railway Co., 808 Edison building, Chicago.

MICHAEL BARKER,
Chairman Transportation Committee,
Chicago Florists' Club.

THE AMERICAN CARNATION SOCIETY JUBILEE MEDAL.

A picture of the American Carnation Society's Silver Jubilee Medal appears herewith. This is a special medal and was awarded to each winner of a first premium in the competitive carnation classes at the National Flower Show in Philadelphia last March.

Fifteen of these medals were awarded as follows:

S. J. Goddard, Framingham, Mass.; The E. G. Hill Co., Richmond, Ind.; Strafford Flower Farms, Strafford, Pa.; J. W. Minott & Co., Portland, Me.; E. F. Lieker, Lansdown, Pa.; Cottage Gardens Co., Queens, N. Y.; A. A. Pembroke, Beverly, Mass.; "Strouts," Hildeford, Me.; Wm. Kleinheinz, Ogontz, Pa.; W. L. Ellis, Bryn Mawr, Pa.; Wm. Graham, Greenwich, Conn.; Mrs. Wm. Austin, Rosemont, Pa.; A. Harvey & Sons, Brandwine Summit, Pa.; Countess Eulalia, Elkins Park, Pa.; W. E. Leuk, Halifax, N. S.

THE CALL OF THE SOUTH.

The Mexican situation was called to my attention so often on my short visit to St. Louis and Kansas City, that I take this opportunity to explain and answer some of the questions asked me regarding the war with Mexico and the effects it will have on the S. A. F. & O. H. convention in Houston.

First of all there is no war and we do not expect any. Second, should there be real war between the U. S. and Mexico, bear this in mind, that the nearest point to the war zone is nearly 400 miles and at best no hostile Mexican army or bandits could come 400 yards into Texas before some Texas ranger or U. S. soldier would name him "Dennis."

Practically all the government troops have been moved to the border and all traffic is at normal and there is no reason why anyone interested in the great convention, the first ever held in the South, should not be attended by the largest delegation from every state ever sent out to a National Florists' Convention.

The Texas Florists greet you, the Houston Florists will meet you and will make your stay pleasant and long to be remembered.

While we have sunshine in Texas and it gets warm, (will here use an expression of a Nebraska soldier) "It is hot out here but we always have a breeze and therefore do not perspire." Can you say more of your climate? Enough said, come to Texas, to Houston and you will want to come again.

OLD LANG.

THE FLORISTS' TELEGRAPH DELIVERY.

The annual meeting of The Florists' Telegraph Delivery Association will be held in connection with the S. A. F. Convention at Houston, Texas, on Wednesday, August 16, 1916, at 10 A. M.

ALBERT POCHELON, Sec.

THE GANTOR AVOCADO.

Everyone who makes a living from the soil might appreciate such a tree as the Gantor avocado, in Whittier, near Los Angeles, Cal. In no year since it began bearing has it brought its owner, H. A. Woodworth, an income of less than \$2,000, and the annual average is \$3,000. Ordinarily the proceeds from avocado growing range from \$400 to \$2,000 per tree.

The avocado is more generally known as the "alligator pear." It is about the size of the Bartlett pear, and very dark green in color. The flesh is about the consistency of a banana and is prized highly for salads.

The Gantor tree was planted eleven years ago and has been the most prolific bearer in Southern California. It produced 5400 fruits last year, which sold at prices averaging fifty cents each. Cutting from the tree adds materially to its annual yield.

Until a short time ago the famous producer was insured for \$30,000, but when a raise in premium rates was demanded because of the war schedules, the policy was allowed to lapse. While insured the tree was surrounded by a high lattice fence, a provision demanded by the insurance company. The fence recently was removed, as horticulturists were of the opinion it might have a bad effect on the fruit yield.

Avocado culture is a comparatively new industry in Southern California. Because of a strict quarantine imposed by the government, seeds, fruits or trees from Hawaii and Mexico may not be utilized in increasing the yield. Future crops must depend on home propagated trees. Trees yield from 500 to 3000 fruits each. There are at present 7000 trees planted in orchard form. It is estimated that this year there will be 20,000 trees planted from the 36,000 nursery stock known to exist. These will come into bearing in about four years.

AMERICAN SWEET PEA SOCIETY

The annual meeting and exhibition of the American Sweet Pea Society was held in Bar Harbor, Me., on Saturday and Sunday, July 15 and 16. The attendance was considered very good for a location so remote from the principal centres. There were fifty or more in attendance from outside of the state. The exhibition was a disappointment as to extent but in quality the plants and flowers were superlatively good and the arrangement of the hall was excellent, presenting a well-balanced picture as a whole. The weather had been very cruel to the local growers, fog and sudden high temperature having denuded the plants of the buds that were expected to bloom for the show and make the display an unprecedented success. Newport, R. I., experts, who had also been counted upon as large contributors to the display and the competition, had been hit by the erratic weather, as well, and not a single sweet pea came from that quarter. Lenox, Mass., saved the day, Messrs. Ed. Jenkins and S. W. Carlquist both staging large exhibits of superb beauty.

W. Atlee Burpee's display was also marvelously fine and its admirable arrangement brought much admiration and many compliments for George W. Kerr who here demonstrated not only his knowledge of sweet peas but his artistic skill in showing them to best advantage. The Burpee flowers were grown locally for the exhibition by A. E. Thatcher of the Mt. Desert Nurseries.

Possibly the most impressive feature of the show, and one that should be a prominent part of every sweet pea show was the array of trained plants in tubs. These were from eight to ten feet high and well furnished with blossoms. They were shown by Mt. Desert Nurseries, and John Stalford, the florist. The best specimens in the Mt. Desert Nurseries' collection were Illuminator, orange, Hercules, pink, Moneymaker, white, and Florence Nightingale, lavender. Mr. Stalford's best were Royal Purple and Hercules.

The Burpee flowers were arranged in terraced vases and tall columnar clusters of tubes, all displayed in groupings of self colors against a dark velvet background and interspersed with the delicate tracery of sprays of *Eulalia gracillimum*. It won the silver cup offered by C. C. Morse & Co. of San Francisco, Cal. The following is a list of a few of the outstanding varieties shown in this great collection:

Fiery Cross, Cherub, The President, Margaret Atlee, Floradale Fairy, Robt. Sydenham, Irish Belle, King White, Constance Hinton, Thos. Stevenson, Mrs. Routzahn, Doris Usher, Margaret Madison, Orchild, Florence Nightingale, King Alfred, Alfred Watkins and Vermilion Bell etc.

The Boddington Challenge Cup and cash prize of \$25 was won for the second time by Edwin Jenkins, gard. for Garand Foster, Lenox, Mass., and the

cup thus becomes his permanent property. This class called for collection of 25 varieties not less than 20 stems to a vase, shown with sweet pea foliage only. The best varieties shown in this collection were the following:

Constance Hinton, white; Edna May, improved, white; Hercules, dark pink; Lady Evelyn Eyre, light pink; Floradale Fairy, cream; Stumpfoot Crimson, crimson; Scarlet Emperor, scarlet; Edward Cowdy, orange; Blue Monarch, dark blue; Alfred Watkins, light blue; Don Alva, lavender; Mrs. Cuthbertson, bicolor; King Manoel, maroon.

The large stage was banked with brilliant masses of larkspur, astilbe, spiraea, foxgloves, sweet williams, lilies, hemerocallis, gypsophila, peonies and other hardy perennial flowers from Mt. Desert Nurseries. In front on the main floor was placed the sweet pea exhibit by the same exhibitor. Here the flowers were cut in long vines with foliage and buds and shown in separate colors in pyramidal branching bamboo stands with telling effect. The leading varieties in this collection were Florence Nightingale, lavender, Carene, orange, Lilian, cream pink, President, scarlet, and Royal Purple.

The silver cup offered by the town of Eden for the best display on a table 3 x 10 ft. was won by Malvern Greenhouses, John H. Stalford, prop., with a fine lot of sweet peas arranged with gypsophila and elegant taste shown in the placing of colors.

R. & J. Farquhar sent a grand group of cut blooms of their new Regal lily, which made a fine show and filled the hall with perfume.

LIST OF AWARDS.

Section A, for Private Gardeners. Grand Foster, gard. Ed. Jenkins, Boddington Cup for collection, Weeber & Don prize for 100 sprays arranged for effect, Dreer's prize for Constance Hinton, Farquhar's prize for 6 varieties, Mrs. Robt. Winthrop, gard. S. W. Carlquist, Breck's prize for 3 vases, Dreer's 2nd prize and Farquhar 2nd prize.

Section B, Private Gardeners and Amateurs. S. W. Carlquist, Burpee Cup for 12 vases and Malvern Greenhouses' 2nd prize for Hercules, Ed. Jenkins, Stump & Walter's prize for 6 vases, Watkins & Simpson's prize for 6 vases and Malvern Greenhouses' prize for Hercules. Mrs. John G. Stalford, Bunyard prize for most novel arrangement and Mt. Desert Nurseries' prize for table decoration. Mrs. H. Hinkle, Mrs. A. M. Coats' Cup for table decoration, Mrs. A. E. Thatcher, Mrs. Coats' 2nd prize.

Section C, Amateurs only. Miss Isabel Miller captured six 1sts. and two 2nds.; B. B. Lyon two 1sts.

Sec. D, Open and Miscellaneous. W. Atlee Burpee & Co., C. C. Morse & Co.'s Cup for display, John Stalford, Jerome B. Rice Co.'s prize for 1916 novelty, S. W. Carlquist, Rice Co.'s 2nd prize, Ed. Jenkins Rice Co.'s 3rd prize, Mt. Desert Nurseries, Lord & Burnham Co.'s gold watch for best arranged display.

Sec. E, Open. John Stalford, Anson prize for best tub of any white variety, Mrs. Carnegie prize for tub any lavender variety, Town of Eden prize for display on table 3 x 10 ft., N. Y. Florists' Club's prize for 20 sprays pink, and five 2nds. and one 3rd. Mt. Desert Nurseries, T. J. Grey Co.'s prize for best tub of any pink variety, Hinkle prize for best tub of any scarlet and two 2nds. Ed. Jenkins, Fottler Fiske, Rawson prize for 20 sprays white, Northeast Harbor Nurseries' prize for 20 sprays scarlet, N. Y. Florists' Club prize for 20 light pink, N. Y. Florists' Club prize for 20 carmine, G. & F. Club of Boston prize for 25 blue, and for 20 picotee edged, 20 striped red, 20 striped blue, 20 bicolor, 20 any other color, 20 orange and 20 yellow, also one 2nd and one 3rd. S. W. Carlquist, G. & F. Club of Bos-

ton prize for 25 sprays native, 20 blue, 20 maroon, 20 orange, and nine 2nds and one 3rd.

Ed. Jenkins won Mt. Desert Nurseries' prize for best vase of peas in Class 6 to 21 with Don Alva. Also Garden Magazine prize for most 1sts. in Classes 6 to 21.

Sprays: R. & J. Farquhar, Collection of cut flowers, scale awarded, cut flowers of Mt. Desert Nurseries, Collection of cut flowers of flowers, honorable mention.

THE ANNUAL MEETING.

The formal opening of the meeting and exhibition took place at 3 P. M. on Saturday, July 15, with a good-sized audience present. Dr. W. M. Leeds, president of the Bar Harbor Horticultural Society, welcomed the Sweet Pea Society to Bar Harbor in a short address well spoken and appreciatively received. Wm. J. Stewart, of Boston, followed briefly, extolling the grandeur and beauty of Mt. Desert. Nature's masterpiece, the gem of the entire Atlantic coast, and complimenting the Sweet Pea Society on the work it had done for its favored flower. Chas. H. Totty, of Madison, N. J., responded on behalf of the visitors, expressing the keen pleasure enjoyed and gratitude for the many hospitalities received on this memorable visit.

Announcement was made that the routine business meeting would convene at 10 A. M. on Sunday, and adjournment was made to accept an auto ride of 22 miles through the picturesque forest, crag and ocean scenery of Mt. Desert Island.

THE BANQUET.

In the evening an elaborate banquet was enjoyed at the Malvern Hotel on invitation extended by John H. Stalford and A. E. Thatcher, of Mt. Desert Nurseries.

The "post-prandial exercises" were opened by J. H. Stalford, who welcomed the guests cheerily, and in the course of his remarks threw down the gauntlet for future rivalry to Messrs. Jenkins and Carlquist, who had come up from Lenox, Mass., and worthily captured so many proud honors.

Secretary H. A. Bunyard was next introduced as the "father of the Sweet Pea Society." Mr. Bunyard eloquently dilated on the beauties of the flower he loves so well and the good record of the society devoted to its interests and expressed the thanks of the society for the lavish entertainment provided.

A. E. Thatcher gave a little talk on his experience as manager of the show stating that the gate receipts had been unexpectedly good, and cordially greeted the exhibitors and other visitors. Edwin Jenkins, referring to the effect of untoward weather conditions upon the exhibition, declared it not an impossibility to have sweet peas ready for the exhibition table at scheduled time if the grower will but use judgment and care to overcome unfavorable conditions. He called attention to the fact that men and trotting horses are provided against exposure by wind shields, and declared that his neighbor Carlquist, who had made such a fine showing here had

fanned his peas for several hours in a critical period in order to save them.

Mr. Carlquist followed with a strong plea for the selection of Boston as the place for the next meeting. W. J. Stewart suggested that the society might benefit by selecting some other city, such as Worcester, Mass., which had not yet been visited.

A rising vote of thanks was extended to Messrs. Stalford and Thatcher.

BUSINESS MEETING.

The Society convened at 10.30 A. M. on Sunday, July 16, in the Casino, Bar Harbor, Me. It was a well-attended and seriously attentive meeting, about forty being present during the session. The reading of the address of President Gray, who was absent, the report of Secretary Bunyard, a paper written by David Burpee and Prof. Beal's report on the trial grounds at Cornell was waived and the report of the treasurer, A. T. Boddington, alone was acted upon. It appeared from this report that the Society's assets showed an amount of \$385.48 over liabilities, but the assets consist largely of vases and uncollected membership dues. Secretary Bunyard explained that bills had just been sent out to members and payment urged, but it was the opinion of several speakers that the financial condition of the Society required immediate attention and Messrs G. W. Kerr and W. A. Sperling were constituted a committee to audit the treasurer's report and report recommendations to the executive committee not later than September 1. The discussion on ways and means brought out mutual challenges from C. H. Totty and J. H. Stalford, the result being that these gentlemen have volunteered to raise a subscription fund of \$250.00 each within the next thirty days to help the Society over the stringency.

Officers were elected as follows: George W. Kerr, of Burpee's, Philadelphia, president; Edwin Jenkins, Lenox, Mass., vice-president; H. A. Bunyard, New York, secretary; William Sim, Cliftondale, Mass., treasurer; W. A. Sperling, New York and William Gray, Newport, succeed Messrs. W. H. Duckham and Wm. Sim on the executive committee. A warm vote of thanks was given to A. T. Boddington for his loyal service as treasurer for several years.

Boston was unanimously favored as the place for the next meeting and exhibition, and a vote was passed so recommending to the executive committee. The first Saturday following July 4 was chosen as the date most advisable and it was voted that it be the policy of the Society hereafter to adhere rigidly to this regular date, regardless of local weather or crop conditions.

A rising vote of thanks was given the Bar Harbor Horticultural Society and then the meeting adjourned.

SOME OF THE VISITORS.

Among the visitors present were the following named:

George W. Kerr, Philadelphia; W. A. Burpee & Co., Phila.; H. A. Bunyard, New York; Henry Weston, Lenox, Mass.; Wm. Sim, Cliftondale, N. Y.; C. H. Totty, Boston; J. H. Stalford, N. Y.; J. T. Rogers, Lenox, Mass.; J. L. Russell, Agnes Thompson, Mrs. Baker, A. E. Reed, George Holliday, Boston.

FLOWERING PLANT GROUP.

By W. B. Thompson, gardener R. M. Johnson, at New York International Flower Show.

Robert Kift, Phila., Pa.; V. T. Sherwood, Charlestown, N. H.; J. Harrison, Duck, New York; S. J. Carlquist, Lenox, Mass.; E. Jenkins, Lenox, Mass.; D. T. Roy and Mrs. Roy, Marion, Mass.; J. S. MacFarland, Durham, N. H.; A. C. Griffin, Meriden, Conn.; Thos. Pegler, Brunswick, Me.; Wm. J. Stewart, Boston; Herman Bartsch, Waverley, Mass.; Wm. Nicholson, Framingham, Mass.; Eben Holmes, So. Orange, N. J.; Herbert Clark, Manchester, Mass.; Mary K. Rogers, Readville, Mass.; Peter M. Miller, Boston; T. H. Meade, Boston; Joseph Coker, W. Valley, Mass.; Mrs. J. F. Flood, Montvale, Mass.; J. F. Briery and Mrs. Briery, Boston; John D. Lunt, Natick, Mass.; Jas. Methven, Readville, Mass.; W. N. Craig, Brookline, Mass.; George Melvin, Framingham, Mass.; Julius Heurlein, So. Braintree, Mass.; P. Donohue, Boston; William Sim, Cliftondale, Mass.; Frank Murray, R. A. J. Edgar, & Co., Boston; George Gordon, Beverly, Mass.; J. Miller, West Lynn, Mass.; Frank Edgar, Waverley, Mass.; Donald McKenzie, Brookline, Mass.; Robert Cameron, Cambridge, Mass.; J. L. Russell, Jr., Jos. Breck & Sons, Boston; H. E. Fiske, Boston; Jas. Armstrong, Dorchester, Mass.; J. L. Russell, Agnes Thompson, Mrs. Baker, A. E. Reed, George Holliday, Boston.

INTERNATIONAL FLOWER SHOW NEW YORK.

There was an enthusiastic meeting at the Manhattan Hotel, Monday, July the 10th, of the joint committee representing the Horticultural Society of New York and the New York Florists' Club. Organization of the committee was completed by the election of T. A. Havemeyer, chairman; John Young, secretary and business manager; Frederic R. Newbold, treasurer.

The date on which the show will be held is March 16th to 23rd, 1917, and the place will be the Grand Central Palace, Lexington Avenue and 46th street, where all recent large flower shows in New York have been held.

Secretary Young was authorized to proceed at once with the sale of trade space and to make preparations for the official souvenir programme.

Charles H. Totty, F. R. Pierson, John Canning, James Stuart, William H. Duckham, George E. M. Stumpp, L. J. Reuter, Julius Roehrs and Fred L. Atkins were appointed a committee to prepare a preliminary schedule.

Many applications for space in the trade section have already been received at the secretary's office, and the

prospects are that there will not be sufficient space in the plans as outlined to satisfy all the demands that will be made for same. It may be absolutely necessary to secure additional space on the third floor, but the arrangements made at present call for the use of the main floor and mezzanine floor only.

JOHN YOUNG, Sec'y.

FLOWER SHOW AT SOUTHAMPTON, N. Y.

The annual Flower Show at Southampton, L. I., N. Y., will take place on July 26 and 27, and promises to be the greatest event of the season. People of well known social standing, who have large estates with gardens and greenhouses and display more than ordinary interest in plants and flowers, flock to this show from various parts of the country.

There have been many prizes contributed for choice blooms of all sorts, ferns, palms, vegetables and decorations by the cottagers, etc. The groups for prizes are placed in a large tent on the spacious lawn of the new schoolhouse grounds. Outside of this tent will be placed other tents for the commercial displays, and between the tents will be placed groups of evergreens, rock gardens, rose gardens and whatever out-door plantings may be set up by commercial firms.

HYDRANGEAS FOR SALE

Twenty five plants in tubs ranging from 1 1/2 to 2 1/2 ft.; 10 to 50 blooms on a plant, just coming into flower. Will sell separately or in lot. Price on application to

Obituary

John W. Poehlmann.

John W. Poehlmann, president of Poehlmann Bros. Co., passed away Friday, July 14th, at his home, 4728 Beacon street, Chicago. Mr. Poehlmann was born forty-nine years ago at Milwaukee, Wis., but spent most of his life in Chicago. His father was John George Poehlmann, who was a native of Germany and came to America in 1857. John W. Poehlmann and Fredrica Ottenbacher were married in 1893 and Mrs. Poehlmann died in 1898, leaving a son and daughter. Six years later Mr. Poehlmann was married to Emma E. Parker, who survives him.

In 1890, when the firm of Poehlmann Bros. Co. was organized, John Poehlmann was made president, Adolph Poehlmann vice-president and August Poehlmann secretary and treasurer, and for twenty-six years the brothers have stood shoulder to shoulder, intimately associated in the trying experiences of building up a great business enterprise which has been one of the chief factors in revolutionizing the cut flower trade and has made Chicago a great trade center in the growing and shipping of cut flowers and plants.

In his capacity as head of the wholesale store, John Poehlmann has probably been in closer touch with the flower market than any other one man, and his devotion to business, his readiness to help others in the trade and his exemplary habits all won him the highest regard of his associates. Naturally retiring in disposition he preferred the quiet of his home and the companionship of his family when not at the store and was seldom seen at conventions and other gatherings of florists, but there is no man in the Chicago market whose advice was more often sought, or who will be more genuinely missed. Mr. Poehlmann leaves a widow, a son, John, 21 years old, and daughter, Frieda, 20 years old, four brothers, Adolph, August, George and Gustave and two sisters Mrs. Bertha Hoppe of Milwaukee and Mrs. Lena Riemer of Morton Grove.

The funeral was held from the home Sunday at 2.30 and was largely attended. The service was conducted by Rev. Rudolph John of the Lutheran church, and was in both English and German. "Lead, Kindly Light" was touchingly rendered. The pall bearers were all from the trade, the active ones being Charles L. Washburn, Ed. Enders, J. C. Vaughan, August Lange, Edw. Winterson and Andrew J. Cronis.

The honorary ones were: E. Wienhoeber, A. L. Randall, J. D. Pickett, E. C. Amling, John Muir, Louis Wittbold, A. H. Budlong, C. A. Samuelson, L. R. Bohannon, M. Barker, E. Olinger, J. Mangel, W. J. Smyth, A. Ringier, P. Breitmeyer, H. E. Howard, George Asmus, M. J. Wietor, O. Friedman, P. Reinberg.

John G. Fleming.

John G. Fleming, a well known resident of Thompsonville, Conn., for many years, died Saturday morning, July 15, shortly after midnight at Mercy Hospital in Springfield, Mass. Mr. Fleming was 56 years old. He was a native of Brooklyn. At the age of nine years he went to work for the late Robert McCrone at his greenhouses in Thompsonville, and for more than 30 years remained in his employ as foreman of indoor work, and for several years, until about a year and a half ago, had been em-

JOHN W. POEHLMANN.

ployed by the Brainard Nursery and Seed Company. He had been in failing health several months, but had been at the hospital only a few days. Besides his wife, Mrs. Mary Fleming, he leaves three daughters, Misses Nellie, May and Ethel Fleming, all of Thompsonville, a brother, James Fleming, and a sister, Mrs. Thomas F. Sullivan.

Harry Hammock.

The death is reported of Harry Hammock, who has been with the Freeman boys in Washington, D. C., for something more than ten years. Death is said to have been caused by heart trouble. He had been complaining for some time prior to the attack which caused his death, but kept on with his work as long as he could. He was

seriously ill for only nine days when death ended his suffering. Mr. Hammock was thirty-nine years of age and is survived by his mother, two sisters and a brother. He was very well liked among the trade and all are sorry to hear of his death.

Albert Fregosi.

Albert Fregosi, partner in the firm of Parodi & Fregosi, florists at 1215 McAllister street, San Francisco, Cal., was instantly killed July 4th, when the automobile in which he was riding skidded. He was 37 years of age, and is survived by his wife, who was also seriously hurt in the same accident.

L. A. King.

L. A. King, florist, of Charlottesville, Va., died suddenly June 27th, while watching the local military company's departure for Camp Stuart, Richmond, Va. He was 58 years of age, and is survived by his wife and two daughters.

Edward M. Bogie.

Edward M. Bogie, a flower grower and retailer, of Jersey City, N. J., died at his home July 5th, aged 43 years. He is survived by two brothers and one sister.

VEGETABLE GROWERS' CONVENTION CHICAGO COMMITTEES.

At a meeting held at the Planters' Hotel on Thursday, July 13th, a permanent organization known as the Chicago Convention Committee of the Vegetable Growers' Association of America was formed for the purpose of arranging a program and entertainment of the Vegetable Growers' Association of America during the Convention to be held in Chicago in September (exact date to be announced later).

The officers and committees are as follows:

Fred Lautenschlager, President; James B. Foley, Secretary; E. F. Kurowski, Treasurer.

Finance—Geo. Sykes, Chairman; Leonard Vaughan, W. L. Kroeschell, D. J. Coyne.

Entertainment—D. J. Coyne, Chairman; Philip J. Foley, Leonard Vaughan, E. F. Kurowski, R. E. Dilger, Aug. Geweke.

Trade Exhibits—A. Dietsch, Chairman; Rudolph Kurowski, Geo. Sykes, Jr., J. E. Pollworth, Leonard Vaughan, John Leonard.

Hotel, Trade Space and Meeting Room—W. L. Kroeschell, Chairman; Geo. Sykes, Leonard Vaughan, Carl Ickes.

Programme—Sam. W. Severance, Louisville, Ky., Chairman.

Reception—J. E. Pollworth, Chairman.

Banquet—Leonard Vaughan, Chairman; W. L. Kroeschell, Geo. Sykes, Philip J. Foley, D. J. Coyne, P. L. McKee.

Further appointments will be announced at forthcoming meetings.

It is the earnest desire and intention of the committee to make the forthcoming Convention a perfect success, and with proper co-operation of all parties interested, success is assured.

The Chicago Convention promises to embody unique features, and it will be the aim of the Committee to bear out the reputation of Chicago, as the Convention City of the United States. Incidentally, the Chicago Association of Commerce is taking a lively interest in this enterprise, and will work with us. JAS. B. FOLEY, Sec'y.

Stoneham, Mass.—Christine C. Drewett has purchased the John L. White greenhouses on Wright street.

CARTERS TESTED SEEDS, Inc., 166 Chamber of Commerce Bldg., Boston, Mass.

SEED TRADE

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending July 7th, were recorded as follows:

Bulbs—Netherlands, \$24; Bermuda, \$111

Plants—Belgium, \$2,079; England, \$210; Bermuda, \$227; Brazil, \$64; Colombia, \$1,456.

Red clover seed—Canada, \$4,574.

Clover seed—New Zealand, \$5,759.

Grass seed—Scotland, \$2,872.

Other seeds—France, \$103; England, \$3,187.

Nitrate of soda—Chile, \$175,724.

Other fertilizers—Scotland, \$528.

Creditors have started bankruptcy proceedings against the O. H. Dickinson Seed Company of Springfield. They allege that the company committed an act of bankruptcy on June 26 by making a general assignment to John Aldrick of Springfield. The creditors who brought the proceedings are the American Agricultural Chemical Company, Bowker Insecticide Company, both of Boston, and the B. G. Pratt Company of New York. Their claims amount of \$512.

NEWS ITEMS FROM EVERYWHERE

CHICAGO.

A. L. Vaughan says the first ten days of June raised the total sales above those of June, 1915.

Miss Charlotte Paradise, bookkeeper for A. L. Vaughan Co., is spending three weeks in the mountains of Colorado.

Allie Zech, of Zech & Mann, is using his two weeks' freedom from store life by motoring about the country, inhaling a fresh supply of oxygen.

Double gypsophilia is now being received from the west by A. L. Vaughan Co. This is very similar to statice in that it keeps well without water.

The lovers of country life along the famous North Shore gave a very successful affair known as the Lake Forest Fair last week, in which flowerers played an important part.

J. Mangel, the Palmer House Florist, is making changes in his conservatory and some unique features will be completed soon. The center will be made into a rockery from the top of which water will stream down, making a delightfully cool place for customers to visit.

Cupid was unusually busy at J. A. Budlong's recently and the marriage of Roswell Schupp and Lydia Schaefer is announced. Roswell is the only son of Mr. and Mrs. Philip Schupp and grandson of Mr. Budlong. Fred Price, of J. A. Budlong's, and Miss Ella Scholz were married about the same time and congratulations are extended to both couples.

A. F. Weiger is building greenhouses at 4121 N. Menard avenue, near Irving Park Boul., where he will grow plants and cut flowers. He will be known as Portage Park Florist. It is of interest to know that this part of the city received its name Portage because it was out of the water a larger portion of the year than other parts of Chicago and the Indians carried their canoes across here.

The sad news of the death of John W. Poehlmann was not unexpected, as his friends knew for many months of his illness. Naturally averse to talking of himself, he said little of his indisposition, till a climax was reached in January when an operation was performed and it became certain that

cancer of the stomach would shortly bring his life to a close. He will be missed, but he has so impressed himself upon this market by an active life the further details of which are to be found on another page, that his influence will remain.

Work on the grounds of Frank Oechslein's new home are under way now, having been delayed by the difficulty of obtaining material. A special feature will be a large rockery at the rear of the grounds which will be so arranged in connection with the high wall forming the back of the pot shed that together they will make a massive background of artistic beauty. H. J. Stockman, whose skill in this line is well known, has charge of the work. The house and grounds are both large and the two carloads of stone which have just arrived will afford an excellent opportunity to carry out his ideas in rockery effects.

Wabash avenue and Randolph street was for many years known as the Wholesale Florists' Corner when three out of four of the corner buildings were occupied by florists. Last week a ninety-nine year lease of the northeast corner was consummated and a new building will shortly be erected. In the present building is the Percy Jones commission house, and until a few years ago it was the home of the once flourishing Flower Growers' Market. The west side of Wabash from Randolph to Lake is now almost exclusively given over to the trade and this new deal will leave the Atlas Block the only one of the buildings on the Randolph, Wabash corner housing florists. Evidently "Florists' Corner" will soon be no more.

The placing of the large floral designs on the lawn, at the funeral of the late John Poehlmann, of Chicago, instead of over-crowding the house, was very beautiful in effect. The sloping lawn has upon it several fine, large trees, under which potted palms were scattered. Among these, the designs and large bouquets were arranged. In the house the family offerings were arranged, from ceiling to floor, in the room where the body lay, covered with a blanket of his favorite flowers, lily of the valley, and orchids. A floral book, so difficult

make is especially worthy of note. It was of white carnations, with the lines done in light pink miniature roses and a marker of inch-wide lavender ribbon separating the pages. It was from the firm and bore the two dates, 1890

PHILADELPHIA.

George Augle, of the Philadelphia Cut Flower Co., was being interviewed. "Business," he said, "is pretty good for this time of year, for although most of the flower buyers are out of town we have with us the deaths and they keep us alive." Sad but true. What is it the Scriptures say? "In the midst of life we are in death." The florist amends this to say, "In the midst of death we are in life."

Lilium regale made its appearance on the cut flower market here this week. It is certainly a beautiful and remarkable flower, and one of the best things E. H. Wilson has found for us in Northern China. The flowers are white inside, and brownish pink and white outside, very fragrant, and it is said the plant is perfectly hardy as far north as Canada. Everybody ought to have a clump of this in their garden. Also forces well for winter flowering.

In the gladiolus cut flower market at present there are in addition to the magnificent America and Augusta two very fine varieties of the Lemoinei; namely, Pink Beauty and Tecomic. The latter is of giant size, nearly twice as big as Pink Beauty, and much lighter in color, being a delicate flesh pink. Both have the characteristic darker blotch, which gives such charm and distinction to the Lemoinei group. The Philadelphia Cut Flower Co. are especially strong on these two fine sorts in our local market.

How to fool the rose bug. Here's a tip from Samuel S. Pennock, president of the American Rose Society. Plant alongside your rose garden Magnolia macrophylla. It blooms with the roses and the rose bugs make a—I was going to say a bee line, but I guess a scramble is better—for the flowers. So the roses escape. You will have no rose bugs on your roses. Sounds rather remarkable but it has been thoroughly investigated and there seems to be no doubt that it

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

is a fact. Charles H. Breck of Boston will please take notice. That wonderful whale oil soap and hellebore recipe of his which he was so proud of thirty years ago is in grave danger.

PITTSBURGH.

Francis P. Smith will leave on August 1 for a visit with his family in Philadelphia.

Charles G. Ulmer left this week for Conneaut Lake, Pa., where he will spend his vacation.

Mr. and Mrs. W. A. Clarke and Mrs. E. A. Williams have returned from the Knights Templar conclave in Los Angeles.

G. Wessenauer, proprietor of The Flower Shop, Sewickley, has been appointed borough forester, succeeding J. G. Curtis.

Miss Eleanor Craig is seriously ill in the Homeopathic Hospital. Miss Craig is the bookkeeper for Miss Emma B. Moxwell, of Wilkinsburg.

The beautiful avenue of Ginkgo trees fronting the Phipps Conservatory in Schenley Park for about five hundred yards now forms a charming appearance and afford delightful shade. Mr. Jones has exceptionally fine carpet beds in the park this season, but labor is hard to get.

Under the supervision of Superintendent George W. Burke an attractive little park has just been laid out at the confluence of the Allegheny and Monongahela rivers, commonly known as The Point. Foreman John W. Jones, of Schenley Park, has laid out flower beds and it is further planned to have a road around the bend.

HORTICULTURE goes to press too early to give full details of the outing given last Wednesday by the Sewickley florists and Sewickley Heights private gardeners for the members of the Pittsburgh Florists' Club and the Horticultural Society of Western Penn. The committees were G. Wessenauer, chairman, Thomas Sturgis, J. Burnet, J. Carmon; William Thomson, A. E. Bonseg, Manus Curren; Richard Boxel, James Stewart, Joseph Wolfe.

BOSTON.

Bostonians who attended the sweet pea show at Bar Harbor are all home again, delighted with the trip and the hospitality enjoyed at Bar Harbor.

The annual picnic of the Gardeners' and Florists' Club will be held on Thursday, July 27. A full program of sports is being prepared and a big attendance is assured, as usual, if the weather is all right.

George Asmus and Mrs. Asmus, with a party of friends, landed unannounced in Boston on Monday, the 17th, having motored all the way from Chicago. Mr. Asmus busied himself distributing codfish among his friends, he having had a run of luck in a fishing trip out of Portsmouth, N. H., that morning. Encountered no sharks.

The Japanese iris was the feature of a special exhibit at Horticultural Hall last Saturday, where a silver medal was awarded the display from the estate of Dr. and Mrs. Homer Gage of Shrewsbury, gard., Allen J. Jenkins.

There was a notable display of Lilium regale associated with perennial larkspurs, by R. and J. Farquhar & Co. Dr. H. Kennedy of Milton also showed Japan iris and the Eastern Nurseries were represented by a fine show of herbaceous perennial flowers. There were several tables of small fruits.

WASHINGTON, D. C.

C. L. Jenkins & Son, of Suitland, D. C., are putting concrete benches in two of their large houses.

Otto Bauer, manager for S. S. Pen-nock-Meehan Co., is taking a vacation at Wildwood, N. J., where his wife and children are spending July.

J. Harper Hetherington, of Washington Floral Co., has gone with his wife to Philadelphia for his annual vacation. They will also visit Atlantic City.

M. J. McCabe is tearing down 10,000 feet of glass on his range in Anacostia, D. C., and is rebuilding. The four old houses were 18 feet wide; the two that replace them will be 30 feet wide and 160 feet long. One of the houses

will be devoted to roses, the other to miscellaneous stock.

Mrs. M. J. McCabe, who conducts a flower stand in the Center Market, has returned from Miami, Fla., where she visited Mrs. Marie Fry, who before her marriage assisted Mrs. McCabe in her work.

The famed commercial orchid collection of George Field has been sold to W. J. and M. S. Vesey of Fort Wayne, Ind., for \$15,000. Mr. Vesey will erect four new houses specially to accommodate the plants.

A number of Washingtonians marched in the parade of the Elks in Baltimore last week. William F. Gude, exalted ruler for D. C., was their leader. Edward S. Schmid marched with his little grandson. George C. Shaffer and Jake Richards were also in line.

NEW YORK.

Secretary John Young has gone to Texas to attend to convention preliminaries.

The engagement of Nat Bernstein, with Gunther Bros., New York, and Miss Ada Greenberg, is announced.

The J. M. Keller Co. have bought the Bergen estate, twelve acres, adjoining their property, in Whitestone, on which they will erect some more greenhouses during this summer, as their present greenhouse plant has proved insufficient to satisfy the increased demand for their stock.

At a joint meeting of the Retail Florists' Association and Greek-American Florists' Association last week a special committee was appointed to confer with other flower and plant organizations in the city with a view to better co-operation. A banquet at the Hotel Breslin followed the meeting.

PHILADELPHIA

A black and white photograph of three large, daisy-like flowers. The flowers have numerous light-colored, pointed petals radiating from a dark, textured center. They are set against a dark, almost black background. The lighting is dramatic, highlighting the texture of the petals and the intricate details of the flower heads. The composition is a close-up, focusing on the individual flower heads.

1216 H St., N. W.

There has been a decrease in the market's offerings. Northern consignments being received here in bad condition. Some few asters and dahlias are already offered. There is but little demand for high-grade flowers. Cattleyas in this market are slowing up. Carnations and sweet peas show the effects of the heat. Outdoor sweet peas are about over with. There is a slow movement of lilies for funeral work.

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage as regards prices and quality to place your order with us.

Soliciting your order through this ad cuts down the overhead selling expenses and you positively get lower prices and better quality. Our terms are liberal and are a guarantee that you get a square deal, all bulbs guaranteed true to name or money refunded.

Write us and upon request we will mail you our booklet giving prices f. o. b. New York or Chicago, and we also cheerfully furnish you with any information that may be desired. Those of our friends who will mail us a list of their requirements will find it has paid them to do so.

Awaiting to hear from you at your pleasure, we remain,
Yours very truly,
Westerbeek & Klyn,
Sassenheim, Holland.

CLUBS AND SOCIETIES

AMERICAN DAHLIA SOCIETY.

The following special prizes are in conjunction with The American Institute of the City of New York for the Dahlia Exhibition to be held at the Engineering Building, 25 to 33 West 39th street, New York, on September 26th to 28th, 1916.

Class A.—Display of Dahlias, any or all classes, grasses or other foliage allowed, quality and arrangement to count. 1st, gold medal; 2d, silver medal. Michell's Seed House, Phila., Pa.

Class B.—General collection, any or all types, arranged for effect, space 50 sq. ft. 1st, American Dahlia Society's silver medal; 2d, the Society's bronze medal.

Class C.—Best display of six vases Giant Single Dahlias distinct varieties. Cut glass vase offered by Mrs. O. P. Chapman, Jr., Westerly, R. I.

Class D.—Dinner table decoration, any foliage, 1st and 2d prizes, silverware presented by Peter Henderson & Co., New York.

Class E.—Decoration of Dahlias, any design, any foliage, 1st and 2d prizes, silverware presented by Henry A. Dreer, Inc. Philadelphia.

Class F.—Basket of Dahlias for effect, any foliage, 1st and 2d prizes, silverware, presented by Fottler, Fiske, Rawson Co., Boston, Mass.

Class G.—Vase of Decorative Dahlias for effect, any foliage, Cut glass vase by Stumpp & Walter Co., New York.

Class H.—Best vase of new Paeony-flowered Dahlias, 12 flowers, not less than four varieties. Silver cup, by W. Atlee Burpee Co., Phila., Pa.

Class I.—Vase of mixed Dahlias, 1st and 2d prizes silverware, by Richard Vincent, Jr. & Sons Co., White Marsh, Md.

Class J.—Best vase of modern Cactus Dahlias, 12 flowers, not less than four varieties. Silver cup, by W. Atlee Burpee & Co., Phila., Pa.

Class K.—Most meritorious and unique exhibit staged by an amateur. Silver flower vase, by Geo. L. Stillman, Westerly, R. I.

Class L.—Best exhibit in the amateur classes. Garden Magazine Achievement Medal.

Class M.—Best vase of a new seedling Cactus Dahlia, shown by an amateur. Silver cup, by Mrs. Chas. H. Stout, Short Hills, N. J.

Class N.—Best vase of a new seedling Dahlia, to be named for donor of premium. Mrs. Gertrude Dahl-Mordecia, Charleston, S. C.

Class O.—Largest Dahlia flower in the show. \$5.00, by Geo. L. Stillman, Westerly, R. I.

Class P.—Smallest Dahlia flower in the show. \$5.00, by Geo. L. Stillman, Westerly, R. I.

Where only one prize is offered in any of the above classes, the Executive Committee may, at its discretion, award a second prize to any other exhibit which is deemed sufficiently meritorious.

The Society's Certificate of Merit is offered for any seedling Dahlia novelty which is deemed distinct and sufficiently meritorious, and may be awarded by the Adjudicating Committee.

PARK SUPERINTENDENTS' ANNUAL CONVENTION

The executive committee of the American Association of Park Superintendents has fixed the date for the holding of the eighteenth annual convention of that organization at New Orleans on Oct. 10, 11th and 12th.

A programme of lectures and papers is being prepared, to be presented by numerous men connected with the park and recreation movement. There will also be numerous social features, outdoor demonstrations and inspection trips, and inasmuch as this will be the first convention of the organization in a city south of Washington, D. C., it

COMING EXHIBITIONS.

August 15-18, Houston, Texas. Trade Exhibition in connection with S. A. F. Convention.

August 24-25.—Lewiston, (Me.) Annual Flower Show, Gardeners' Union, Lewiston City Hall.

July 26-27, Southampton, L. I., N. Y.—Southampton Horticultural Society.

July 26-27, Southampton, N. Y.—Tenth Annual Flower Show, Southampton Horticultural Society.

August 3, Oyster Bay, L. I., N. Y.—Dahlia Show, Oyster Bay Horticultural Society.

August 11-12-13, Boston.—American Gladiolus Society, Horticultural Hall.

August 24, Worcester, Mass.—Gladiolus Exhibition.

Sept. 2-9, Cleveland, Ohio.—Industrial Exhibition and Fair.

Syracuse, N. Y., Sept. 11-16.—New York State Fair.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

is expected that it will be a record breaker in the matter of attendance, because the trip to the South will be a popular one in October and there will, no doubt, be a large attendance of park executives of cities of the South which have been advancing rapidly in recent years in the way of park development.

Mr. Wm. Allen, Secretary of the New Orleans Association of Commerce is chairman of the local committee on arrangements. Announcement will be made later of the convention program in detail. The officers of the organization are: Emil T. Mische, president, Portland, Oregon; Roland W. Cotterill, secretary, Seattle, Washington.

WESTCHESTER AND FAIRFIELD HORTICULTURAL SOCIETY.

The attendance at the regular meeting, Friday evening, July 14, was all that could be desired. There was a nice display of seasonable flowers for which the following awards were made. Jas. Linane, honorable mention Japan iris; Owen A. Hunwick, Trachelium coeruleum; John Andrew, Japan iris; P. W. Popp, Phlox Rickard, vote of thanks. Mr. A. J. Micklars, of Stumpp & Walter Co., was a visitor. The summer show committee reported a grand success financially as well as socially and artistically. The fall show committee reported progress. A feature of the next meeting will be the vases of outdoor flowers arranged by assistant gardeners only.

The annual outing will take place Tuesday, Aug. 8, at Rye Beach, N. Y. There will be plenty of entertainment for old and young. The hotel management will serve a fine shore dinner. It will be necessary for those who desire the shore dinner to notify W. J. Sealey, Portchester, N. Y., at least three days before to insure plenty of food and good service. Dinner tickets for the men will be \$1.75; women, \$1.50. The next meeting will be held Aug. 11th.

P. W. Popp.

ST. LOUIS FLORIST CLUB MEETING.

A delightful time was had at the July meeting which was held on the grounds of the Bourdet Floral Co. The attendance was nearly 75. After an inspection of the greenhouses President Bourdet called the meeting to order on the lawn. The picnic committee said that everything was in readiness. All other committees, including the Spring Flower Show, reported progress. Nomination of officers next took place. They are as follows: Jules Bourdet for president; W. S. Wells, Aug. Hummert and F. X. Gorly for vice-presidents; J. J. Beneke and J. J. Windler for secretary; W. C. Smith for treasurer, and Frank Windler for a three-year trustee. Election will follow at next meeting. Nominations for outdoor meetings for the next three months were as follows: August 10, at the John T. Davis estate, gardener S. Beer extending the invitation; September at Sanders' Nursery, C. C. Sanders extending the invitation; October at the new home of the St. Louis Wholesale Cut Flower Co., 1410 Pine street, D. G. Geddis extending the invitation. President Bourdet set up a fine lunch for which a rising vote of thanks was extended.

NASSAU COUNTY HORTICULTURAL SOCIETY.

A Sweet Pea exhibition was held in conjunction with the monthly meeting of the Society at Glen Cove, N. Y., on Wednesday evening, July 12. The exhibits were of very good quality and made an excellent display. Henry Gaut won 1st prize for 12 varieties of sweet peas, and for six varieties of sweet peas, and special mention for herbaceous flowers. James McCarthy received 1st for 25 white, 25 pink and 25 red sweet peas, and 2nd for 6 varieties of sweet peas. It was decided to hold the annual Chrysanthemum Show in Pembroke Hall, Glen Cove, on November 2nd and 3rd. The society's prizes for 25 white, 25 pink and 25 any other color sweet peas were all captured by Henry Gaut.

WEED KILLER

THE VERY NEWEST AND QUICKEST METHOD OF DESTROYING WEEDS, GRASS AND OTHER GROWTH IN GARDEN WALKS, GUTTERS, TENNIS COURTS, DRIVEWAYS, ETC.

This fluid absolutely destroys all weeds and other growth wherever applied, and its effect on the ground prevents the growth of fresh ones for a year and thus saves a great deal of time and labor, as no cutting, hoeing or hauling away of the weeds is required.

We manufacture the strongest line of DISINFECTANTS on the market.

CORRESPONDENCE SOLICITED.

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

At the regular meeting of this society last week a Gladiolus Show was decided upon and it will be given in the Carnegie Library building, West Haven. The Iris Show and the Rose Show have been such great successes that there is not the slightest doubt of the success of the Gladiolus Exhibition.

W. E. Davis, Jr., of Whitneyville, advocated the establishment of a Rose Garden in New Haven. The people here should not be content to see Hartford carrying off all the honors in this respect. Mr. Davis said that if the city could not spare the money the only thing to do was to raise the money by popular subscription. John H. Murray, head gardener of the Yale Botanical Gardens, thought that at least ten thousand dollars would be needed, because the mere preparation of the soil would be a great expense. Mr. Davis thought, however, that if \$1,500 to \$2,000 were raised, it would be a beginning—and this beginning would be an inspiration to others to give.

HOLYOKE AND NORTHAMPTON GARDENERS' AND FLORISTS' CLUB.

The regular meeting was held July 11th at Bonnie Brae, Holyoke, the estate of C. E. Mackintosh. George Strugnell has been in charge of these gardens for several years and is well known in this district for his all-round ability. Members enjoyed a stroll through the flower garden and vegetable quarters, noting with satisfaction the flourishing appearance of the crops. A large cherry tree, laden with luscious fruit came in for special attention.

D. J. Gallivan extended an invitation to hold the annual picnic on his farm at Smith's Ferry. The offer was accepted, but the date depends on the progress of the sweet corn, which is an indispensable item for this occasion.

H. E. Downer read an essay on "Herbaceous Perennials," and exhibited sprays of Schillea, Perry's White, Thalictrum Fendleri and Pentstemon Gloxinoides.

NEW YORK FLORISTS' CLUB.

President Henry Weston has appointed Walter F. Sheridan, Chairman, Emil Schloss, J. A. Fiesser, W. H. Siebrecht, Joseph Fenrich, Roman J. Irwin and Peter Duff a nominating committee to select candidates for office for 1917. This committee is to make its report at the November meeting of the Club.

JOHN YOUNG, Sec'y.

CLUB AND SOCIETY NOTES

Secretary Thomas Edward Tyler was awarded two blue ribbons and a red and yellow one each for orchids exhibited at the recent meeting of the Garden Club of Allegheny County.

The Newport, (R. I.) Garden Club will hold its annual flower and fruit show in conjunction with the Newport Horticultural Society on the lawns of the Hill Top Inn, August 15, 16 and 17, with tea and dancing in the afternoons.

The annual meeting of the Cincinnati Florists' Society took place on July 10th. The following officers were elected: William Schumann, president; James Allen, vice-president; Alex Ostendarp, secretary; J. Chas. Murphy, treasurer; Gus Adrian, director.

At a preliminary meeting held in the flower store of Spear & McManus, on Asylum street, Hartford, Conn., on July 7, it was voted to organize "The Florists' Club of Hartford." A committee was appointed to draw up a constitution and by-laws and report at a later meeting. William Doogue was chosen temporary chairman, and A. Dixon, temporary secretary.

At the recent meeting of the Horticultural Society of Western Penna., "Roses" was the topic for discussion. There was also an excellent display of hybrid teas by John Murphy and Michael Curren, both of Sewickley Heights, and Mr. Allen. The latter also showed hybrid perpetuals. The society decided to suspend its sessions until September. Meanwhile a new meeting place will be selected. "Dahlias" will be the subject of the next program, the participants to be announced later.

The last meeting of the Connecticut Horticultural Society prior to the summer vacation was held in the County Building, Hartford, on July 14. The secretary was instructed to extend a hearty vote of thanks to the Park Department for the beautiful exhibits of bedding plants at the recent show. It was also voted to award to Fred Boss, head gardener at Elizabeth Park, a first-class diploma for the arrangement of the exhibit. President Halister came in for a shower of praise for his success in handling the show.

"METROPOLITAN"

The Sign of Superiority

The success of your greenhouse depends largely upon the results previously shown by the builder you employ.

Therefore, every grower should investigate the capabilities of the greenhouse builder he selects for the job.

The above full iron frame, patented curved eave Metropolitan greenhouse was erected by us for Mr. W. W. Fuller, at Briar Cliff Manor, N. Y. This house is 26 x 100 feet, with an absolutely water proof cement boiler cellar. It is divided into three compartments which are separately heated and ventilated, and, being glazed with 24 x 24 inch glass, is extremely light. We also did the masonry.

A Bundle of Goodly Glass Garden Suggestions

HERE are four good suggestions, and one for a conservatory. Every one is thoroughly practical; every one is promptly erected for you.

That small one in the upper left hand, is 18 feet wide and 33 long. We erected it for Mr. Henry E. Woodman, of Overbrook, Pa. It is just a nice, compact, one compartment little conservatory with enough room for a surprising number of plants.

The one at the bottom left is 18x70 feet, divided in two compartments and connected to the stone gateway by a glass passage, which makes another compartment. Mr. W. S. Dooling of Mt. Airy, Phila., Pa. is the satisfied owner. That conservatory interior in the center is a creation of Hoggson Bros., which we carried out for them on R. R. Conklyn's residence at Huntington, L. I. It's a unique idea well worth adopting.

The long one in the top right, with a central entrance, is 25 by 100 feet with three compartments, each about 33 feet long. A 10-foot glass passage comes pretty close to covering the needs of a very large plan.

The one in the top right is just a glimpse of the exterior. It is a very large conservatory erected several years ago on the Longwood estate at Brookline, Mass.

Here then is a goodly bundle of suggestions. Which one do you want to have? With assistance we can give you an approximate estimate on?

Our greenhouses have been aptly called "the houses of the future." They are well worth the investment.

Our catalogues are welcome to.

An appointment with our representative to call you gladly to make it very pleasant.

BURPEE'S EARLY OR WINTER-FLOWERING SPENCERS

The House of Burpee has long been recognized as "American Headquarters for Sweet Peas," and our introduction of these Fordhook Strains of Winter Flowering Spencers marks an era in commercial Sweet Pea growing.

The Novelties offered below, excepting Yarrawa, are the results of crosses made at our Fordhook Farms during the past seven seasons. All stocks are grown at our Floradale Farm, "The California Home of Sweet Peas."

FORDHOOK PINK AND WHITE:—A most popular Winter Flowering Spencer. A color that is always in demand, similar to the old Blanch Ferry, Bright rosy pink standard, wings almost pure white. The immense flowers measure 2½ inches in diameter and are almost perfect in form. A very early, free and continuous bloomer, awarded a Certificate of Merit at the Spring Show of the Pennsylvania Horticultural Society, Philadelphia, March, 1915, and the American Sweet Pea Society, San Francisco, June, 1916. ¼ oz., \$1.25; ½ oz., \$2.00; oz., \$3.50.

FORDHOOK PINK:—This is a distinct shade of pink suffused with lavender throughout. Flowers are large size, exquisitely waved, produced in threes and fours on long stems. ¼ oz., 40c; ½ oz., 75c; oz., \$1.25; ¼ lb., \$3.50; ½ lb., \$6.25; 1 lb., \$12.50.

FORDHOOK ROSE:—Introduced by us in 1915. Flowers of largest size usually borne in threes and fours. A charming shade of rosy carmine. Awarded a Certificate of Merit at the International Show, New York, March, 1915, and the Spring Show of the Pennsylvania Horticultural Society, Philadelphia, March, 1915. ¼ oz., 50c; ½ oz., 85c; oz., \$1.50; ¼ lb., \$4.00; ½ lb., \$7.50; 1 lb., \$15.00.

YARRAWA:—This magnificent Australian variety has proved its unusual merit with commercial growers in all parts of the country. It has an exceptional reputation as a sure money maker. First exhibited by us at the great International Show in New York, March, 1914, and awarded a Certificate of Merit by the Pennsylvania Horticultural Society, March, 1915. Flowers exquisitely waved, averaging 2½ inches in diameter, many of them being duplex or double. A bright rose pink with a clear creamy base. ¼ oz., 55c; ½ oz., 60c; oz., \$1.00; ¼ lb., \$2.75; ½ lb., \$5.00; 1 lb., \$10.00.

Our Special Leaflet on Winter Flowering Sweet Peas free on application.

THE KENILWORTH GIANT PANSY

Seeds are all grown by the firm and are offered in the following mixtures and separate colors.

22. **GIANT KENILWORTH STRAIN.** The flowers are of perfect form and substance; many of the immense flowers are from 3½ to 4 inches. It is a striking collection of beautiful colors and markings, rich with shades of rose, brown, bronze, mahogany and many others too numerous to mention. Light, Medium or Dark Mixtures.
23. **GIANT KENILWORTH SHOW.** An extra fine strain of large flowers; the immense flowers are of circular form and great substance. A beautiful collection of colors and markings.
26. **GIANT KENILWORTH CUT FLOWER MIXTURE.** Is a distinct class by itself, surpassing all other strains as a cut flower or for exhibition purposes, for inside or outside growing; the large flowers are carried erect above the foliage on heavy stems, 7 or 8 inches long, in the most graceful manner, and stand the hot, dry weather well.
28. **GIANT MASTERPIECE.** A remarkable type; the curled, wavy petals giving the flower a double appearance; large flowers of great substance, on long, strong stem.
30. **GIANT THREE AND FIVE BLOTCHED PANSIES.** A superb mixture. Flowers large and of circular form and of great substance. The display of coloring is unsurpassed. A combination of almost every shade of rich, velvety colors; reds are particularly conspicuous; the petals being distinctly marked with three or five large, dark blotches.
32. **GIANT PARISIAN.** The flowers are of enormous size and beautifully marked, mostly fine dark blotches on white and yellow ground; an unusually showy mixture.
34. **GIANT BRONZE.** A fine mixture of all shades of velvety brown, bronze, Havana brown, mahogany and copper shades.
45. **GIANT APOLLO (Masterpiece type).** New bronze, veined and blotched. Strongly frilled petals. A superb Pansy.
49. **GIANT MERCURY.** New. A deep blackish purple, really self-colored, without blotches or spots. The flowers are extraordinary in size and substance, being the largest flowers of all self-colored Pansies.
82. **ORCHID FLOWERED, Mixed.** A dwarf, free bloomer, with a range of delicate colors that do not exist in any other Pansies; a remarkable combination of light rose, shell pink, blush, mauve, fawn, light brown, orange and chamois.

New Early-flowering or Winter-blooming Giant Pansies

An entirely new and distinct strain of Pansies. The main advantage of these new Pansies over all hitherto existing Pansies is the extreme earliness of flowering and its unusual hardiness, which enables them to withstand quite severe Winters, and to bloom right on into the Summer. Sown at the same time as other Pansies, they begin flowering the early part of March or as soon as the snow is off the ground, many times having four or five large flowers to a plant, when all other Pansies are only showing buds. The flowers are large, well formed and fragrant. They are highly recommended for Autumn planting on graves and for very early bedding, as well as for early cut flowers.

14. **WINTER SUN.** Golden yellow, with dark eye.
15. **ICE KING.** Silvery white, with dark blue eye.
16. **CELESTIAL QUEEN.** Light or sky blue.
17. **CHARM OF MARCH.** Dark velvety blue.
18. **MIXED.** The above four colors with other shades and variations.

EACH COLOR SEPARATE OR MIXED

500 seeds 50c., 1000 seeds \$1.00, ¼ oz. \$2.00, ½ oz. \$3.75, 1 oz. \$15.00.

20. **PRINCESS.** The New Upright Pansy.

This strain is entirely distinct from all others. It is absolutely compact, upright growing, and extremely weatherproof, enduring many storms without damage to its flower. The flowers are mostly blotched and frilled like the Masterpiece, of good form and heavy, velvety texture, on heavy stems carried well above the foliage. Attractive by the brilliancy of its colors.

500 Seeds 20c., 100 Seeds 35c., ¼ oz. \$1.00, ½ oz. \$2.00, 1 oz. \$7.50.

FREE OFFER RAINBOW is a mixture of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every \$1.00 worth of Pansy seed I will send, free, 1000 seeds of Rainbow and with other amounts in like proportion.

Prices of Kenilworth Pansy Seed

All sorts and mixtures except the new Pansy Princess and the Early Flowering or Winter Blooming are \$5.00 per oz., \$1.25 per ¼ oz.; 5000 seeds \$1.00; trade pkt. of 1000 seeds 25c.; and 5 pkts. \$1.00. Please order by number.

GIANT PANSY SEED

In Separate Colors

38. **Mme. Perret.** Red and wine shades.
42. **Adonis.** Light blue, white center.
44. **Black.** Almost coal black.
48. **Lord Beaconsfield.** Purple, shaded white.
64. **Goliath.** Large, curled yellow, blotched.
68. **Emp. William.** Ultramarine blue, violet.
72. **Emp. Franz Joseph.** White, blotched blue.
98. **Indigo Blue.** Deep, velvety blue.
100. **Light Blue Shades.**
106. **Pres. McKinley.** Yellow, dark-blotched.
114. **Purple.** Large, rich, deep color.
118. **Psyche.** Curled white; five blotches.
126. **Red.** A collection of rich red shades.
137. **Vulcan.** Dark red, with five blotches.
138. **White.** Large satiny white.
140. **White with Violet Blotch.**
142. **Yellow.** Large, gold, yel.
144. **Yellow with Dark Blotch.**
145. **The preceding 18 colors separate or mixed. Mixed in equal proportions, 1000 seeds 25c.; any 5 packets, \$1.00.**

Early Flowering LONG SEASON Spencer Sweet Peas

for Winter Flowering Under Glass

Since the introduction of Yarrowa Spencer Sweet Peas, great effort has been made on the part of Californian and Australian growers to produce Early-flowering Spencer Sweet Peas. We offer a list of varieties by one of the most prominent Californian and one of the most prominent Australian growers. One of their chief characteristics is their long season, period of blooming, frequently remaining in bloom for four months. Every one of the crosses were made from the old Early-flowering or Christmas Grandiflora types on the late or Standard Spencers as parents. We feel that there will be little demand for the common or Grandiflora Winter-flowering Type and have, therefore, decided to discontinue offering the same.

Californian Varieties Ready for Delivery August—September

EARLY MORNING STAR

The color is a deep orange scarlet or flame color in standard, with rich, orange-pink wings. The flower is practically the same color as the Late-flowering Spencer Thomas Stevenson. It does not burn out in the open and under glass will be magnificent. The flowers are large and of best Spencer form, and borne in threes and fours in wonderful profusion. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SNOWFLAKE

This is one of the best Early-flowering White-seeded White Spencers. The blossoms are very large and of the best waved Spencer form. The flowers are borne in wonderful profusion on long stems. The form is every bit as good as White Spencer. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SPRING MAID

Those who are familiar with the Late-flowering Spencer Mrs. Hugh Dickson, will have a good idea of what a handsome variety this is. The color is a light pink on a cream ground, and the blossoms have the same splendid characteristics of Mrs. Hugh Dickson for a florists' flower. It is a most effective flower and, like our other Early-flowering Spencers, it carries a great wealth of blossoms borne in fours on long stems. There is no Early Spencer Cream Pink which is as attractive as Early Spring Maid. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

Australian Varieties

CONCORD STRAIN

Pkt., 18 seeds each of any of the following varieties, 35c.; 5 pkts., \$1.50

CONCORD PINK. A beautiful, new variety of a most attractive shade of delicate pink. The flowers are large and of true Spencer form. The stems, which are long and strong, usually carry 3 large flowers.

CONCORD CRIMSON. A variety of great merit on account of its glowing color. It is a rich crimson; the flowers, of true Spencer form, are borne on strong, stiff stems.

CONCORD LAVENDER. Without a doubt this is the finest of all Lavender Winter-flowering Sweet Peas. The color is a beautiful shade of rich, rosy lavender. The flowers are of true Spencer form.

CONCORD WHITE. A splendid, pure white variety of wonderful vigor and

EARLY MELODY

This is a deeper shade of pink than Early Song Bird on white ground, closely resembling Countess Spencer and near Hercules. It might be described as rose pink on white ground. The effect, when bunched, is most pleasing. It is very floriferous. The flowers are borne on long stems and mostly four large, well waved blossoms to each stem. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY SONG BIRD

The flower is the same color as Florence Morse Spencer and Lady Evelyn Eyre, and a bit lighter than Elfrida Pearson. It has the same excellent form and features of Mrs. Hugh Dickson, but is on a white ground. The placement of the flowers is splendid for packing and the flowers are borne on long stems in threes and fours. When in full growth it seemed as though every stem carries four large blossoms. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY HEATHER BELL

This will be one of the most popular shades with all florists, as it will be useful for making up for any occasion. It is a little like the variety known as Anita Wehrman, but vastly superior in every way. The flowers are very large, borne in fours and threes on long, stout stems, and are of beautiful, bold Spencer form. The color is a rich but pleasing mauve, but after standing in water the color becomes a beautiful mauve lavender. Pkt., 25 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

Ready for Delivery NOW

substance. The flowers are pure white and of ideal Spencer form, borne three and four to the stem.

CONCORD SALMON. A rich shade of salmon pink and very free flowering. The flowers are borne three and four to a stem and are of true Spencer form.

CONCORD BLUE. This magnificent variety is of a beautiful sky-blue color, sometimes varying darker, the variation, however, being slight. Quite the finest sky-blue we know of.

CONCORD PURPLE. A leader in its color. When first opening, a delightful shade of mauve purple, changing, as the flower ages, to purple blue. The flowers are of ideal Spencer form and quite large.

NOTES ON CULTURE OF FLORISTS' STOCK

(CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toll, we ought to blame the culture, not the soil."—*Lope*.

Callas

Roots that were grown in pots or benches last season, have had a good rest and are now starting sturdy crown growth, are good for another season. But if they are anyway soft or flabby, get some new roots as they are cheap enough and will be better in the end. Shake them out and replant into 5, 6 or 7-inch pots, in fibrous loam three parts and well decayed cow manure one part. See that each has good drainage and place them after potting in a cold frame where they can stay until the first week in September. Give water freely when growth starts, and keep outside as long as there is no danger of frost. The most substantial blooms are grown in a temperature of from 58 to 60 degrees night.

Care of Gardenias

Keep the beds moist and give a good syringing on all bright days to keep down red spider and mealy bug. It will be necessary to thoroughly damp down the house two or three times a day. Attend well to ventilating so as not to cause an unequal temperature. Start in the morning and keep on increasing the ventilation until about 80 degrees is reached with sun heat, and reduce the air in the afternoon the same way until the minimum of 68 or 70 degrees is reached. During cool and dark weather it is better to run a little heat in the pipes, so as to keep a night temperature of about 65 degrees and to dry the house out a bit. Good care from now on will tell the tale.

Cinerarias

Now and up to the middle of September is a good time to sow seeds of cinerarias. Well drained earthenware seed pans are filled with a very sandy mixture of turfy loam and partly decayed leaf mold. After a good watering down the seeds are thinly scattered on the surface, pressed down with a piece of smooth board, and the pans covered with panes of glass. As soon as they afford a hold to thumb and finger a pricking off into other pans or flats is in order, and after they have made four or six leaves pot off into small pots. As they attain size give a shift into larger pots every now and then. The richness of the compost for each shift should be slightly increased.

French Bulbs

The earliest shipments of Roman hyacinths, paper white and trumpet major narcissi are now due any time. Some of each should be placed in flats at once. The paper whites can remain in light all the time, but the Roman hyacinths, and trumpet majors are better kept in a cellar, or if in a lighter place, given a coating of coal ashes after being well watered. The top of each bulb when planted should be even with the surface of the soil. Make the soil around the bulbs moderately firm. When well rooted they can be brought into

a light house and at a temperature of 60 degrees they will be in flower in seven or eight weeks. The paper whites are easily flowered in November, but the hyacinths and trumpet majors come later, usually being in good shape for Christmas. Watch all bulbs after planting and see that they do not become dry at the roots.

Harrisii Lilies

Bermuda lilies are now about due. If they are wanted to bloom early, pot at once as soon as received. A 5-inch pot will do for a 5x7 bulb; for a 7x9 bulb a 6-inch pot will suit better. Use any good loam with about one-fourth of its bulk of well decayed cow manure thoroughly mixed. Place the bulbs so that after they are potted they will be entirely below the surface of the soil. After a good watering to settle the soil, they should be stood closely together in a frame and covered with 4 or 5-inches of soil so as to keep them cool and moist. In about a month or six weeks most of the bulbs should have made a good start with roots and should then be brought into a sunny house.

Palms: Rhododendrons

Dear Sir:—Would you please suggest a remedy through a later issue of HORTICULTURE for scale on palms? Could you also recommend a safe fertilizer that would stimulate the plants back to a healthy state after treatment? What is the best time to plant our hardy rhododendrons?

Norton, Mass.

A SUBSCRIBER.

I would say sponge the leaves with aphine, giving them quite a little rubbing, using the aphine according to directions and afterwards giving a good syringing with some force. This cleaning should be done about once every two weeks until you have them free of scale. There is no better safe stimulant than liquid cow manure given once a week. A bushel of manure to a barrel of water; that is, 48 to 50 gallons of water. Let it stand for two or three days then apply the liquid to the roots.

The best time to plant rhododendrons is early in the spring just as soon as you can work the ground. It is better to have the ground prepared in the fall by trenching and work in lots of leaf mold. They like a somewhat sheltered situation from the sun in order to do well.

Reminders

Order all bulbs that are needed, without delay.

Pot up Boston and other ferns as they require.

Mark all the best forms of double petunias for stock plants.

A quantity of bulb flats will soon be needed, so see that they are repaired.

Turn potted stock that is plunged outside occasionally to check them from rooting through.

Next Week:—Cattleya gigas; pairing; Feeding Chrysanthemums; Geranium Cuttings; Winter Flowering Sweet Peas; Reminders.

The key
to prosperity

We have been continually impressed when visiting well kept and prosperous growing establishments with the attention given to minor cultural details which many others are apt to regard as non-essentials

and consequently are apt to neglect. This holds true, whether one is considering roses, carnations, sweet peas, plants or other crops, outside or under glass—invariably this ever-watchful care and solicitude that the most trivial minutiae may not be overlooked and neglected marks the grower who wins the coveted distinction, whether this be a trophy at a sweet pea show or a rose exhibition or the commercial remuneration of established demand and top price for any product with which his name may be directly associated.

Friends
of the peony

We print this week pertinent communications on the peony society controversy from two men well known in peony circles—Rev. C. S. Harrison and C. W. Ward. Both of these gentlemen argue in defense of the action of the northwestern peony growers in forming a new society in that section entirely independent of the existing national organization, yet after reading these two letters it does not look like an impossible feat, if the right parties will go about it in the right way, to harmonize the affairs of the old and new organizations and adjust their mutual relationships to the end that each will be a help to the other and the peony itself reap a substantial benefit. HORTICULTURE believes in a multiplicity of organizations but it also believes in order and methodical cooperation voluntarily subject to centralized responsibility. Now is the time to cultivate forbearance and, under good generalship, the exercise of wise diplomacy will work wonders. And if the result of the episode should be to inject a little more "snap" into the councils of the parent society all will probably agree that no harm will ensue.

Our
bird friends

In "Birds in Their Relation to Man," a revised edition of which, just published by the Lippincott Company, includes the results of government investigation of all supposedly harmful species of birds, the authors tell us that of forty or fifty birds, exclusive of hawks and owls, thus far investigated, the English sparrow is the only one which has been condemned. Of seventy-five species of hawks and owls found in America, only six were found to be injurious. And state bounties upon dozens of species have been withdrawn in consequence, state protection being substituted. Only the English sparrow is without the pale, and six states offer a bounty for its extermination. We find, however, that the prejudice against even the English sparrow is far less pronounced of late than formerly, and it would not surprise us to yet see this sturdy little emigrant placed on the friendly list as has been done with so many of the once hated hawks. The English sparrow's voracious appetite for canker worms and young gypsy moth caterpillars is coming to be gratefully recognized by many whose gardens and orchards have suffered from the depredations of these pests. Give him time and he will make good his citizenship.

CONVENTION NUMBER

HORTICULTURE'S ANNUAL S. A. F. CONVENTION NUMBER WILL BE ISSUED ON AUGUST 19, 1916. ITS ACCOUNT OF THE HOUSTON PROCEEDINGS WILL BE EAGERLY LOOKED FOR BY THOUSANDS OF READERS.

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur C. Ruzicka

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Ruzicka. Such communications should invariably be addressed to the office of HORTICULTURE.

Bonemeal

Use plenty of bonemeal in the soil at planting time, especially the coarser grades, as now is the time that we can get it right where the roots will be able to find it and use it. The bone can be added to the soil before it is wheeled in or it can be spread on the benches after they are filled and just before planting. The latter method insures an even distribution, which is very important in growing roses, for if the fertilizers and manures are not applied evenly the plants will not grow evenly and will be much more difficult to handle. There will also be many plants that will not produce all the roses that they should. After applying the bonemeal to the benches it will be necessary to go over them to work it in, unless old plants are to be planted. If this is to be done the bone will get into the soil while planting for it is necessary to make large holes to accommodate the long roots on the old plants.

Care of the Boilers

With the hot weather now here it will not be necessary to fire any more, leaving the boilers idle. These should not be allowed to stand this way for any length of time as they will soon rust, more so this summer owing to the continual wet weather. Clean out all ashes, soot, etc., and spray the boilers on the inside with crude oil. Other oils are equally effective but as they are much more expensive it is not advisable to use them. It will not hurt if the grates are sprayed over too, which will add a little to their life. All broken or weak parts should be noted and repairs sent for at once so that they will be sure to be on hand when the fires may have to be started again. It will be best to take the smoke pipe between boiler and the chimney down, too, and clean this out well, for if it is left on the boilers full of old soot it will rust very rapidly and will soon have to be replaced.

Disbudding

Proper attention will have to be paid to see that all little buds are removed on time so that they will not be taking vitality from the plant and at the same time delaying its development. The first buds on old plants that have been pruned and replanted and those that were merely cut back will all have to be taken off and this should be done as soon as the buds are visible, which will be as soon as they are about the size of a grain of wheat. Take them out with one leaf at least to insure a stronger break.

Drainage in Late Planted Benches

Houses that are planted from now on must have good drainage, for if the wet weather should continue, trouble is likely to be experienced later if the drainage between the boards is not sufficient. During the hot dry summers we used to have, there was no such trouble, as the plants dried out just the same. It may be necessary to take up some of the boards and chop off a little along

one edge, but it should be done, and under no circumstances should two boards come together without at least a quarter of an inch space between them.

Manure for Fall Mulching

It will be necessary to get quite a little manure in, to get it ready for the fall mulches. If the weather keeps up it will have to be used sparingly and it must be well decayed. To get it into this shape it will be necessary to start now and keep turning it over every two weeks or oftener if necessary. It will be better if it contains a little short straw as it will be more porous and easier to handle. It should not contain any long coarse straw or weeds used for bedding.

Number of Shoots to a Plant

Mr. Arthur C. Ruzicka,

Dear Sir: Will you kindly advise me, what in your opinion is the best number of strong bottom shoots to keep on each Beauty plant when the Beauties are breaking freely from the bottom and each plant has put out about six strong shoots together with a few weak ones?

Thanking you in advance for your kind assistance, I am,

Very truly yours,

L. A. R.

New Brunswick, N. J.

Circumstances alter cases, and before deciding your question it will be well to note several points, to insure the plants against harm. If the plants are strong and healthy, they will be able to carry six shoots in addition to the mother growth, which can be removed and shipped to market as soon as it produces a bud thus giving the breaks a much better chance to grow. Then there is the soil. If this is poor, not mixed well, contains no fibre, it will be a proposition to make the plants grow. On the other hand, if the soil is of a good heavy clay sod with plenty of grass roots to make it porous and contains a third of its bulk of good cow manure, with a little muck added to it and a good sprinkling of bonemeal for good measure, it will be much easier to grow the plants on, and they will take care of much more bottom breaks than they would in the poor soil. With good soil and care in growing, I would advise you to leave all the six strong shoots, merely removing the weak ones, which should be done when the shoots are only an inch from the bottom. Most of these bottom breaks will bud as soon as they are about six inches high, making it necessary to go around quite often and dishud all of them. This work should be done as soon as the buds show so that there will be no energy going into the buds that should have gone to strengthen the plants. As soon as the shoots are up to the first wire remove any leaves that touch the soil so that there will be no danger from spot, this demanding constant attention especially this year. In tying distribute the wood over the wires so that there will be plenty of chance for air to circulate all around and through the plant.

CLUBS AND SOCIETIES

AMERICAN SWEET PEA SOCIETY.

Address of President William Gray at Bar Harbor, Me.

Fellow Members of the American Sweet Pea Society:

I am sure that the members of the American Sweet Pea Society cannot but note the steady improvement that has taken place during the past few years in the cultivation of the sweet pea, and feel proud of the fact that the society has provided through its exhibitions the incentive for such marked improvement.

It is unfortunate that in some sections the weather conditions of the past two years have dampened the enthusiasm in those localities, but it is a pleasure to note that the increased interest in other sections more favored has been sufficient to keep the exhibitions up to the standard now set.

I am of the opinion that a mistake is being made in holding our shows away from the large centers where means of communication are easy and economical, especially for the amateur. The amateur should receive more encouragement in the way of generous prizes, and the classes offered for amateurs should be kept separate from the private gardeners' classes.

Members may not be aware that it is only through the generosity of the trade that the society has been able to meet its obligations, and it is with the hope that the society may in time become self-supporting that this is being done. I understand from our secretary that many members have not kept up their interest in the society and I would suggest a weeding out of such members from the list, and that a campaign be started to place the society on a self-supporting basis.

The schedules of our shows should be placed in the hands of the members and intending exhibitors early in the year, so that intending exhibitors may decide the classes to grow for, and the seed firms offering prizes may receive some benefit. With such a popular flower as the Sweet Pea it should be possible to awaken enough interest to have a successful society as well as successful exhibitions. I believe there is a future for such a society, and while I greatly appreciate the honor with which you have favored me, I also wish to assure you of my continued interest in the society.

GLADIOLUS SOCIETY OF OHIO.

The fourth annual exhibition and flower show of The Gladiolus Society of Ohio will be held in the Assembly rooms of The Hollenden Hotel, Cleveland, on Friday and Saturday, Aug. 18-19, 1916. Copies of the premium list will be furnished members and all intending exhibitors on request. All who expect to exhibit will please notify the chairman of the executive committee, R. E. Huntington, Plainesville, O., stating the number of vases or amount of space desired.

WILBUR A. CHRISTY, Sec. and Treas.

COMING EXHIBITIONS.

August 15-18, Houston, Texas. Trade Exhibition in connection with S. A. F. Convention.

August 24-25.—Lewiston, (Me.) Annual Flower Show, Gardeners' Union, Lewiston City Hall.

August 3, Oyster Bay, L. I., N. Y.—Dahlia Show, Oyster Bay Horticultural Society.

August 11-12-13, Boston.—American Gladiolus Society, Horticultural Hall.

August 24, Worcester, Mass.—Gladiolus Exhibition.

Sept. 2-9, Cleveland, Ohio.—Industrial Exhibition and Fair.

Syracuse, N. Y., Sept. 11-16.—New York State Fair.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

GEORGE W. KERR.
President elect American Sweet Pea Society.

AMERICAN GLADIOLUS SOCIETY.

The schedule of the seventh annual exhibition of the American Gladiolus Society to be held under the auspices of the Massachusetts Horticultural Society at Horticultural Hall, Boston, Mass., on August 11, 12 and 13, 1916, has been received. Twenty-seven classes are liberally provided for by the Massachusetts Horticultural Society and President C. F. Fairbanks puts up \$25 for 1st and \$10 for 2nd premium for best seedling gladiolus, one spike. Fifty-nine classes more are mostly devoted to special prizes by various firms, societies and individuals. A big show is predicted.

The schedule of prizes is now ready and may be had free from the Secretary. Those wishing to make trade exhibits should advise the undersigned how much space they require, limited to 150 square feet, for which there is no charge.

Correction—in class '87—the offer of the medal should read Garden Magazine Achievement Medal, not Garden City Magazine, as printed.

H. YOWELL, Sec'y.

538 Cedar St., Syracuse, N. Y.

R. R. RATES TO HOUSTON.

Michael Barker, Chairman Transportation Committee, Chicago Florists' Club, advises us that the rate from Chicago to Houston and return is \$46.25 instead of \$46.65, as previously announced. Also that the round-trip rate from Memphis to Houston and return is \$28.25.

New York to Houston by Water.

The prospects for a large party to attend the S. A. F. and O. H. Convention at Houston, Texas, from August 15 to 18, are becoming brighter each day. The opportunity for a delightful sail of five days down the Atlantic coast on a strong, comfortable steamer appeals to many, particularly as it is the first time it has been possible to travel to an S. A. F. Convention via the ocean.

The New York Florists' Club delegation will leave New York on Wednesday, August 9, at 12 noon on the S. S. Momus, due in New Orleans on Monday, August 14. If the party stays for the day, they will be guests of the New Orleans florists. The run by train thence to Houston is but eleven hours.

The rate is \$80 to \$83, according to return route selected, this sum including berth and meals on the boat. Reservations must be made before August 1, as with the heavy travel on the boats it will be impossible to hold the state-rooms beyond that date.

Already a dozen or more have signified their intention of going. Make up your mind now to visit the Convention, and if you go from New York get the benefit of this healthful trip.

Information will be cheerfully given and steamer reservations made by

J. R. LEWIS,

Sec'y Transportation Committee.
438 West 37th Street, New York City.

MARYLAND STATE HORTICULTURAL SOCIETY.

The Summer Meeting of the Md. State Horticultural Society will be held at Hancock, Md., Aug. 29-30.

This will afford a splendid opportunity for the members from all parts of the State to see the great progress and development of the fruit industry of that section of Washington County. Within a radius of a few miles around Hancock there are growing about 300,000 fruit trees, both peach and apple, the majority of which are bearing. The principal object of the summer meetings is to permit the members to not only acquaint themselves with the great development of the industry in various parts of Maryland, but to also study methods practiced by the growers in the culture of trees and handling of the fruit.

The members of the Society, and all others interested in the industry, are invited to assemble in Hancock on the evening of August 29th. A meeting will be held in the Town Hall, which will be addressed by prominent speakers. On Wednesday, August 30th, 9 A. M., the visitors will be conducted through the orchards of the vicinity in automobiles, as guests of the citizens and fruit growers of Hancock.

Dinner will be served at 1 P. M.,

and this will be followed by a general meeting, extending from 2 to 4 P. M. It is hoped to have a demonstration of packing apples and explanation of the new Maryland Apple Grading and Packing Law that went into effect July 1st, 1916.

A most helpful and pleasant outing is promised all who attend. The Committee of citizens and growers of Hancock extend a cordial invitation to all. Hancock will celebrate its Home-Coming Week during that time, and great preparations are being made to accommodate the visitors. Hancock is located upon the old National Pike,—is near Berkeley Springs; the Potomac River and Canal pass by the town. Four garages will be available for accommodation of machines. Complete program will be issued shortly.

For further information regarding the meeting, write—

Secretary, T. B. SYMONS,
College Park, Md.

Special arrangements are in progress for the annual meeting and exhibition of the Horticultural Society, which will be held in the Fifth Regiment Armory, Baltimore, "MARYLAND WEEK," November 14-18, 1916.

REPORT OF THE SWEET PEA TRIAL GROUNDS.

By Prof. A. C. Deal, to the American Sweet Pea Society at Bar Harbor, Me.

When the American Sweet Pea Society was organized, the winter-flowering sweet peas had already been considerably developed, but the culture of them had not become very general. The marvelous display of Winter-flowering Sweet Peas at the National Flower Show held in Boston was a revelation to large numbers of florists. Today, as a result of this end of the work of the Society, the Winter-flowering Sweet Peas have taken their place among the leading cut flower crops grown under glass.

Value of the Crop.

If the actual returns were known, it is quite probable that the value of this flower would rank after roses and carnation. Not only is the value of the crop very large, but the investment in greenhouses, specially constructed for growing this crop, represents a very large sum and is annually increasing. The recital of these facts will indicate the firm conviction of many florists that the Winter-flowering Sweet Peas have become established in the tastes of the flower-buying public. Let us hope that in turn the growers themselves will recognize their duty in supporting the Society which has done so much by means of exhibitions and otherwise to advance the interests of this flower.

Evolution.

As previously stated, many varieties were known when this Society was organized, but these are now giving way to better forms. The varieties first sent out were of the old, open form with notched standards, then came the hooded varieties, and finally the present varieties of waved form. Again the first varieties were white, pink and white, and maroon with bluish wings; but today we have practically all best colors found in the garden type. No doubt if the amateurs were as much interested in this type we should see every color known in the garden type. In the short space of twenty years, the varieties of Winter-flowering Sweet Peas have passed through all the

stages of evolution shown in the garden varieties during two hundred years. Even the Winter-flowering Cupid is not a figment of the imagination, but a possibility provided it had any value at the present time.

The new waved varieties for Winter-flowering are making a decided impression, and we think (after seeing Yarrowa) that there may be some further revelations among the new Australian varieties now being offered.

Tests Under Glass.

Last winter we resumed our tests with the varieties of this type and grew about seventy varieties. These represented some unnamed seedlings, new introductions and the best of the older varieties. Although seeds were not received until October and the seed sown in pots, the results were such as may be expected by persons who use Sweet Peas to follow Chrysanthemums. The greenhouse used was well adapted for the tests as it was thoroughly modern, forty feet wide, with high walls and without benches. Eleven unnamed seedlings from A. C. Zvolanek were a source of considerable interest. Some have since been named.

Some Promising Novelties.

Among them Britannia, a large waved flower with carmine standards and Tyrian rose wings, was the best variety we have ever seen in this type. Heretofore, red varieties have been distinctly inferior to those of other colors, and this variety represents, therefore, a decided advance in this color.

Mrs. Charles Zvolanek. A large waved lavender flower. Ridgeway calls the color pale rose purple, changing to a light mauvette. This variety was one of the first to bloom and was quite productive.

No. 110 Light Pink. This was a beautiful soft rose-pink. The flower was large and waved. The color should be a pleasing one to the flower buyers. Unfortunately the plants this year were not perfectly healthy, and some flowers with side notches were seen. We hope to test this again for we were pleased with its fine color. It is worthy of trial.

Servian Prince. A large flower with magenta standard and Rood's violet wings. It is a very conspicuous flower when seen in the greenhouse in Mid-winter. As it blooms among the first, it is soon covered with many spikes of flowers.

Miss F. Roland. A large flower with Venetian-pink standards and rose-pink wings.

Orange Orchid. A large waved variety of a vivid geranium pink color, and is one of the most striking varieties that has been sent out. This variety was a center of interest wherever shown, and probably will rank after Christmas Pink and Christmas Pink Orchid as the finest of Zvolanek's varieties.

Some of the other unnamed seedlings are very promising, and when some are fixed will doubtless be heard from.

Yarrowa continues a giant-flowered variety.

It seems difficult to trace the origin and history of some of the varieties recently introduced. We shall have to ask for further time to investigate these. We hope to continue the trials again this winter and think that sufficient material will be ready to war-

rant a new and revised bulletin on Winter-flowering Sweet Peas.

Out-Door Trials.

The outdoor trials were very largely reduced in extent this year as we have few samples from the dealers. This proved to be a blessing in disguise since our appropriations and financial balances were so heavily cut this year. We have had to reduce our labor on the trial ground over one-half and consequently we are not seeking to extend our trials this year. No doubt the next administration will favor more liberal maintenance appropriations, for the cuts were not made because of any dissatisfaction, but were the result of an attempt to place all allowances under a budget system. The legislature and the people of New York may be depended upon to remedy this matter when they understand it, consequently we are looking forward to next year when we hope to resume all lines with renewed energy. The interest of the people in flowers is growing at a remarkable rate. This summer we have 150 students registered in floricultural courses at Cornell. Two-thirds of these are regular college students, and the remainder are Summer school students. This is the largest summer registration we have ever had, and if the Department of Floriculture is to provide adequate instruction and continue to grow and expand, it will need the support not only of the florists but of the flower-loving public. The experimental work should develop simultaneously so that we may increase our knowledge of plants.

This year our garden varieties of Sweet Peas will come into bloom about July 25th, with but few flowers before August 1st, and consequently no report can be made at this time. Notes will be made as usual so that we shall have a record of these varieties for publication later.

In closing, permit me to say that the latchstring is always out, and we shall be pleased to see any of the members whenever they visit Ithaca. Whether you need our help or not we will be glad to have your kindly criticism and helpful advice. We wish to thank all those who have assisted us in our work and hope they may feel justified in continuing their support in the future.

A HOLLYHOCK IN A CITY BACK-YARD.

Sing of the red rose as we will—
And we know she is queen of the garden still—
And dwell on the lily's splendid grace,
And the charm of the pansy's winsome face;
And the witching scent of the mignonette,
And the sweet pea's dainty blossom, yet
There is none of them all that will dare to mock
The dear, old fashioned hollyhock.
Tuck it away if you will back there
At the garden's end, it will climb to where,
In its regal beauty, glad and tall,
It greets us over the hedge or wall,
Like a dear old friend from the long ago,
From a dear old garden we used to know:
The fairest garden in all the land,
Because SHE kept it with loving hand,
Little you know how much of care,
Brave old hollyhock, standing there,
You gain from the hearts of the passing
Through!
Brief, but memory, long,
Goes on and on, shall still survive,
Through the bees in the great stone hive,
Through the years and age, in the thoughts of
The garden,
Your beauty shall bloom again.

—Boston Trierler.

THE NEW PEONY SOCIETY

Editor HORTICULTURE:

Replying to Mr. Fewkes in your last, permit me to say, that I am very well acquainted both with the east and west. I lived some years in Boston and in Chicago and have seen the mighty empire of the west grow up from babyhood. I have spent years on our bleak frontiers in Nebraska and Minnesota. In '57 I commenced preaching in the latter state, and had a tract of country 100 miles in extent where I was the only minister or surgeon. I worked with the people and suffered with them. I have known families to live for weeks on corn meal and salt, and others live a long time on fish alone. I was once reduced to potatoes and tallow, and didn't know the history of the tallow, and didn't want to know. I have been nearly drowned—nearly frozen—traveling when the mercury was 40 below. I have had the great timber wolves howl along my track at night almost broken hearted because they couldn't have young preacher raw and warm for supper. So I love the west and am a part of it. Living for years on the storm swept prairies, I became much impressed with the need of home adornment and so of late years when my church nerves gave out—after building sixteen churches and paying for them, I have been preaching the "Gospel of Beauty," which is next to the gospel of grace. My attention was turned to the peony as the cheapest and most satisfactory flower, and so I pushed it, issuing three editions of the peony manual and writing it up in papers having over a million circulation. I was charter member of the national Peony Society and appreciate the kindness shown me. I also appreciate the patient labors of those who have taken the kinks out of the tangle of the names.

The fact stands out the east does not understand the west, or appreciate their need. We found that in Minnesota they were raising the finest peonies on earth, and there was an enthusiasm there which was manifest nowhere else. We made strenuous efforts for the Society to meet at the Twin Cities. One year we arranged for a meeting with the Horticulture Society where we could stage the finest flowers in the land. Plans were also laid to awaken the interest of the great northwest—the Dakotas and Manitoba. Then we gave the most cordial invitation for the National Society to meet with us. Our request was as promptly turned down as though it was the cry of a child for the moon. Other efforts were made and we concluded that it would take about 100 years to get the Society to come to the Twin Cities. Other floral societies could meet there. They could even cross the continent. The parks of the Twin Cities are equal to any and there are some of the ablest florists of the land, but no, the Peony Society could not go where they were most needed. Some of us have done our best to awaken an interest among the

people. The pioneer days are past. The time for the home beautiful has arrived. I am an old man of 83 and I am impelled to do what I can and leave this a more beautiful world. There was no use in waiting, we were ignored. The most promising field was neglected. We thoroughly canvassed the matter—whether to organize an auxiliary society, or go alone. Should we organize as an affiliated society we might be outvoted by those who hug the Atlantic coast. The organization is yet somewhat tentative. If it is best for us to come under the wing of the National Society all right but it must be a *national society* and not a local one.

York, Nebr. C. S. HARRISON.

My dear Mr. Editor:

I have noted the editorial in your issue of July 8th entitled "As Between Societies." You of course know that I have always favored the banding together of local interests into an Association, whenever such an association might tend to advance the business interests of its members. I can see no objection to the organization of the new Peony Association of the Northwest. There is no moral, legal or business reason why these gentlemen should not form an association for the purpose of bringing themselves together, get better acquainted with each other and promote the interests of the peony throughout their section as much as they possibly can.

I am not at all in sympathy with a certain spirit that seeks to relegate the progress and advancement in floricultural and horticultural matters exclusively to the care of national organizations. There is no reason why a half dozen peony growers, either at York Nebraska, or somewhere else in the United States should not combine together and form any sort of an association that is not antagonistic to the laws of our country. Neither is there any reason why such an association should not co-operate with a National Association covering the same subject. There is no reason why such national

association should have any antipathy or should seek to curb or in any way control any such local organizations.

The United States is a very large country. It is several thousand miles from the Northwest to the Atlantic Coast, where the American Peony Society usually holds its annual meetings. It is a very expensive journey and it is practically impossible for northwestern growers to bring any peony flowers to any of the national shows held in the East and exhibit them in creditable conditions. Consequently, in organizing the Northwestern Peony Association, those gentlemen interested in the promotion and culture of the peony in that section are doing just what average business men of good sense ought to do in every section of the country that is far removed from the centers usually patronized by the national associations.

At the time of the organization of the American Peony Society considerable opposition developed among a certain section of the members of the Society of American Florists and a peony committee was organized within the ranks of the Society of American Florists, the principal object of which was to nullify the efforts of the peony growers themselves to organize into an independent national society.

The sooner the opposition to the organization of societies throughout the United States which are designed to promote and advance the interest of floriculture and horticulture ceases, the better it will be for the entire fraternity. With a country 3,000 miles in breadth and two-thirds as long, north and south, with a population already reaching 100,000,000 and in the not far distant future destined to rise to the enormous number of 200,000,000, there is no reason why there should not be many local organizations, regardless of whether they become closely affiliated with national organizations or not.

The only thing that horticulturists and floriculturists of the United States should seek to avoid is anything that will hinder the progress or stand in the way of advancement in these lines, whether that progress goes forward along certain lines and according to the rules that a few individuals would like to prescribe or not. The fact that progress is being made ought to be sufficient.

Yours sincerely,
Eureka, Cal. CHAS. W. WARD.

BOSTON FERN SPORELINGS.

Has any one ever grown plants from spores of the Boston fern or any of its varieties?

Two reports have come to the writer of the development of spore-grown plants from *Nephrolepis bostoniensis*. The reports come from widely separated localities and growers, but agree more or less as to details. Unfortunately the results were obtained years ago, and none of the plants so produced are now alive.

The writer is interested in getting information as to any authentic cases of the Boston fern being grown from spores, and will especially welcome an opportunity to see living plants so produced. *N. Wittboldi* was supposed to be a spore sport from *bostoniensis* but the character of all the plants which I have obtained under the name of *Wittboldi* seem to indicate that it is a form of some Malayan species. *N. philadelphensis*, a chance sporeling at Horticultural Hall, Fairmount Park, Philadelphia, seems to be the same as *N. washingtoniensis*, itself, I believe, a chance sporeling, and both are undoubtedly to be identified with another Malayan species, sometimes called *N. floccigera*. These are all broad-leaved forms, very different from *bostoniensis* or *exaltata*. *N. Elmsfordi*, reported as a sporeling from *Whitmani*, stands, I believe, as the only form in the Boston fern series credited with this origin.

Information is asked therefore on the following points:

1. Is there any known instance of the development of plants from Boston fern spores?

2. From the spores of any variety of the Boston fern?

3. What were the characteristics of the plants so grown?

If living plants are now being grown, the writer would like an opportunity to call and see them if near New York, and in any event would be glad to receive small plants for which an exchange from a list of a hundred named forms is now available. It may be noted that microscopic examinations so far made have shown complete sterility of spores among Boston fern forms, but it is not impossible that they may occasionally produce fertile spores.

R. C. BENEDICT,
Brooklyn Botanical Garden.

BOUGAINVILLEA: LA FRANCE ROSES

Mr. Editor:

I have some old plants of Bougainvillea. Will you please tell me through HORTICULTURE the best way to treat them so as to have them bloom well next spring? Also, I have some La France roses that are very shy of blooming but have an excellent growth every year and a very few blooms, although of good size and quality. They have been pruned out in the garden about twelve years. I shall be

very thankful for any advice you can give me on these subjects.

Yours respectfully,
C. N.

The Bougainvilleas should be pruned back and repotted now in a compost of turf and cow manure well-rotted. A little sand should be added unless the turf was cut from a sandy soil. Add also a little coarsely ground bone. Keep the plants growing along, giving a winter temperature from 45 to 50 degrees.

The La France roses have probably been enriched too much with nitrogen, or may be growing in partial shade. Transplant to a place in full sun, to which has been applied some barn yard dressing at least two years old and a sprinkling of ground bone over the surface.

The Pea Pack.

It is some weeks since we have given any crop news, as there has really been very slight changes in crop conditions since our last item in Seed Trade Notes. Some crops have developed sufficiently to indicate what the final results will be and we are able to state at the present writing that the pea crop of 1916 will fall far below that of 1915, both for seed and canning purposes.

The pack of canned peas this year will hardly be more than 50 per cent. of that of 1915 the country over. We have been informed that the average number of cases per acre packed in 1915 was about 120. This year it is estimated that it will not exceed 70 and maybe less. In New York State the average for 1915 was close to 100 cases; 1916 will not be above 50. The two states—Wisconsin and New York—produce more than 75 per cent. of all the peas packed in this country, but smaller producing states, such as Michigan, Indiana, Ohio, Maryland and Delaware have all fallen much below their production of a year ago.

Reduced Yield of Seed Peas.

As to the seed crop nothing really definite can be said at the present writing, but indications are that early peas, such as Alaskas and the Extra Early types will not average more than two-thirds of last year's yield. The other canning varieties, such as Admiral, Advancer and Horsford will give better returns than the early sorts but will fall considerably under their yields of last year. It seems to be the general judgment of the growers that all of the large-podded varieties, both late and early, will be quite short. Instead of there being a surplus of these varieties in the hands of the growers after contracts have been filled the coming autumn and winter, it is very doubtful if growers will be able to deliver 100 per cent. In fact it is practically certain that they will not, though the extent of the shortage cannot now be estimated in figures.

Beans.

It is rather early to give any estimate of the bean crop, but in a general way it is known that it started with something of a handicap, particularly in the east where planting was at least two weeks later than usual. There are rumors that the crop in Colorado is in danger owing to shortage of water;

how serious this may prove we are not prepared to say.

We will endeavor to furnish further crop news covering California and European crops in general within the next week or two. Such information as we have is not quite up to date and we, therefore, will omit details. However, in a general way with the exception of salisfy and one or two other specialties, California crops are expected to make a fair average. European conditions are not as well known.

Onion Seed Crop Prospects in Canary Islands.

(Consul George K. Stiles, Teneriffe, June 10.)

Onion seed constituted one-fourth of all exports to the United States from the Teneriffe district in 1915. The coming crop, which should begin to move next month, shows a decided increase in the amount of choice, expensive wax (or white) seed. The ordinary canary-yellow onion seed, however, has suffered because of the winter drought, and shows a loss estimated at 40 to 50 per cent. The red seed, which is in less demand, also suffered from drought, but to a smaller degree than the yellow. Yellow seed will consequently be scarce, and there may be difficulty in filling contracts for this grade, while the stock of "wax" seed will be in excess of orders.

The average contract prices are reported as follows, per pound: Fancy white "wax," \$1.50 to \$2; yellow, 85 cents (American gold); and red, 80 cents.

The stocks of onion seed last year were fairly cleaned out, so that this season there appears to be less probability of old seed being mixed with the new. Both adulteration and inferior quality of onion seed are difficult to detect until after sowing.

As practically all onion-seed contracts to the United States are made on an f. o. b. basis in a Canary port, the higher freights of this year must be met by the American buyers. Last season a number of complaints of bad seed were caused through long delays in trans-shipment via England. Owing to this fact the Liverpool route has been largely abandoned this year, according to statements made by prominent shippers.

The larger percentage of the crop will be routed via Porto Rico to New Orleans or via Habana to New York.

The crop is slightly earlier than last year and first shipments are expected to be made by July 15 and should extend to the end of August.

Generally speaking prices may be taken as somewhat lower and showing a tendency to weakness this season.

A statement of interest to American onion-seed growers is contained in a report made by two of the larger dealers growing their own seed, to the effect that too intense a selection of onion seed for the points of size and color shows poor results in the quantity of seed obtained at the next harvest.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending July 14, were recorded as follows:

Bulbs—England, \$16; Bermuda, \$71. Plants—Italy, \$4; England, \$584; Bermuda, \$8; Guatemala, \$60; Jamaica, \$6; Venezuela, \$256; British Indies, \$63.

Red clover seed—France, \$20,125; Italy, \$95.

Clover seed—France, \$5,018.

Grass seed—France, \$103.

Other seeds—France, \$4,968; England, \$3,899; British East Indies, \$1,552; Hongkong, \$267.

Nitrate of soda—Chile, \$61,260.

Other fertilizers—England, \$334.

Notes.

Tampa, Fla.—The Allen & Reils Seed Company will open for business August 1st with a complete line of seeds and supplies.

The hop crop in Vermont is in good shape and very even throughout the state. The recent hot weather has done much for the squash and corn planters.

Doylestown, Pa.—Appraisers of the estate of the late W. Atlee Burpee, have filed an inventory in the Register of Wills office, which appraises the estate at \$1,211,990.62, including real estate valued at \$298,450. The "Fordhook Farm" property, the Burpee home here, is appraised at \$122,500.

We are pleased to learn through Curtis Nye Smith, counsel, that the Agricultural Appropriation Bill as amended and passed by the Senate, contains (p. 25) an item of \$3,000 to cooperate with horticultural organizations in the standardization of botanical names.

Of course the House will have to concur in this amendment before it becomes effective.

CATALOGUES RECEIVED.

Jackson & Perkins Company, Newark, N. Y.—Select Peony List. 8 pages, illustrated.

J. Bolgiano & Son, Baltimore, Md.—Wholesale Summer and Fall Catalogue for Market Gardeners, Truckers and Farmers.

W. E. Marshall & Co., New York.—Fall Bulbs for 1916. A neat business-like catalogue. Daffodils in dark green tone are the cover subject.

A. T. Boddington Company, Inc., New York.—Midsummer Garden Guide, containing a list of Strawberry Plants, Bulbs for Fall Planting, Seasonable Seeds and Sundries. Illustrated.

Schenectady, N. Y.—Henry A. Miller and John F. Korman, doing business under the name of the Mohawk Greenhouse Company, have begun business on Van Vranken avenue, growing plants, shrubs and flowers, both wholesale and retail.

NEWS NOTES.

Negaunee, Mich.—Frederick Nielsen of Chicago has sold the Negaunee greenhouses.

Baltimore, Md.—J. E. Bartell has sold one section of his greenhouses on York road to John Simon.

Asbury Park, N. J.—Max H. Kruschka has purchased the Frederick Height farm and will use same as a nursery.

Worcester, Mass.—A. H. Lange has presented over 1,000 plants to the children for planting in their little "garden cities."

Fishkill, N. Y.—A recent issue of the Fishkill Standard contains a pretty three-column story entitled "The Spirit of Love," by Anna W. Young, of the Spy Hill Conservatories. The little narrative is said to have been inspired by the gift of an orchid blossom by a New York wholesaler to Miss Young on the occasion of a visit to his store.

NEWS ITEMS FROM EVERYWHERE

PITTSBURGH.

Henry Ludwig and Edward J. Baumbach are visiting at Dunkirk, New York.

Samuel Cape, of Lawrenceville, florist, is one of a party of friends at Atlantic City.

L. F. Post, of the I. W. Scott Seed Co., and Mrs. Post have returned from a trip to Duluth.

Nicholas Cassaluccia, landscape gardener for the Penn. R. R., is spending several weeks in Michigan.

Accompanied by his family Foreman James Moore of West Park will leave August 1st for a lake trip to Toronto.

George B. Telfair, a member of the seed firm of Scobie & Parker, is spending a month in the mountains of North Carolina.

Miss May Brush, a saleswoman for The Flower Shop, Sewickley, is spending a vacation at Ligonier in the Allegheny Mountains.

Russell H. Boggs, a wealthy merchant, who has a fine greenhouse on his Sewickley Heights estate, is disposing of his surplus flowers to some of the retail trade.

Accompanied by his family Anthony Smith, Jr., left last Saturday for a motoring trip to Atlantic City. Joseph Koenig, a decorator for the A. W. Smith Co., with his family left on Monday for a sojourn in the Maryland mountains.

Karl Doelker, salesman and designer for Ray J. Daschbach, Inc., will leave on Monday next for a sojourn in the country near Mount Leon. Frank Kilgallen, of the same firm, left on last Saturday for a trip including points of interest in Ohio.

Albert Vick has just returned from Rochester, N. Y., where his father, Frederick Vick, has been seriously ill for some time. Jacob Gerwig, another employee of Pittsburgh Cut Flower Co., left last Monday to join his family at Conneaut Lake.

It is to be regretted that throughout the Summer Playground season which closed yesterday, there were not sufficient flowers to meet the demand of any of the Friday Flower Days. It was necessary to send some little ones

away each week without the longed for and expected "bunch of flowers," although the majority of the wealthy owners of gardens and greenhouses contributed generously and the wholesale trade did all possible within their scope to relieve the situation.

CHICAGO.

Miss Mabel Schulz of J. A. Budlong's is vacationing at Cedar Lake, Ind.

Frank Hazer of Geo. Reinberg's store force, was recalled from a vacation trip by the sudden death of his father.

A card from Henry Arnold, with O. A. and L. A. Tonner, says his vacation at Eagle Lake, Wis., is all right, but that mosquitoes are biting much better than fish.

Stephen Keller of George Keller & Sons, Chicago, flower pot manufacturers, who was injured some time ago by being caught in the machinery, is doing nicely. He expects to be able to leave the hospital soon.

H. Rollo Mueller of Sedgewick, Kansas, a nephew of Chas. P. Mueller, Wichita, Kan., is now in the employ of Frank Oechslein learning the practical side of plant growing after being graduated last June from the Floricultural department of the University of Illinois.

John Meier, carnation specialist at Tessville, Ill., a member of the Chicago Flower Growers' Association, is trying the experiment of working his men from 4 till 9 A. M. and from 4 till 8 P. M., suspending work during the heat of the day. Mr. Meier says they are now filling the houses with new soil and this schedule of time is not only satisfactory to the men but by it he gets more accomplished than under the old way.

Of all the summer flowers, O. A. Tonner considers the gladiolus one of the most satisfactory. The off-color varieties have now been eliminated from the market by the fact that they would not sell and better, new varieties have taken their places. The retailer has learned to show the gladiolus in a more attractive way than heretofore, and in the tall basket with the accompaniment of gypsophila the spikes have a stately grace not excelled among summer flowers.

PHILADELPHIA.

Daniel Donoghue and party of six were visitors at Commodore Westcott's bungalow on Barnegat Bay, July 17th to 20th. On the 21st W. F. Gude and party of twelve distinguished men of affairs from Washington, D. C., arrived on the scene, for a few days' enjoyment far from the maddening crowd.

Horace Cheeseman, well known to the trade all over the country, after having been on the invalid list for three years has happily recovered his health after a sojourn in Florida and later in the Adirondacks, and is now connected with Ralph M. Ward & Co., New York City. We are all glad to see his smiling face again and hope he may long be spared to spread the shining light amid the encircling gloom.

N. B.—You can always find gloom somewhere no matter how bright the god of day beams on the universe.

Abram L. Pennock, the veteran retired florist of Lansdowne, Pa. (and Jupiter, Fla.), thinks that everybody ought to have a hobby. No matter what it is—be it horses, horticulture or hens. When one has slaved his allotted span in business and acquired a competence he retires, of course. But if he has no hobby—he rusts out in no time, is a most miserable creature and doesn't know what to do with himself. That's where the hobby comes in. Take Admiral Ward for instance. His hobby is roses. And isn't he the joy and inspiration for all lovers of the queen of flowers—as well as holy poem to himself!

NEW YORK.

Winfried Rolker, whose respect for anniversaries is well-known to his friends, observed on Saturday, July 22, the fiftieth anniversary of his sailing from Antwerp to begin his business career in New York after having completed his education in Europe. On Saturday, July 29, another important event, Mr. Rolker's birthday anniversary, will have a fitting celebration. May there be many happy returns.

Charles Millang and Charles C. Johnson have formed a corporation under the title of Johnson & Millang, Inc., with Mr. Johnson as secretary

and treasurer, and will open a wholesale plant and bulb salesroom on the basement floor of the Coogan building, corner W. 26th street and Sixth avenue. Auction sales will be held every Tuesday and Friday, beginning with September 12 when decorative stock and bulbs will be offered, and continuing until after the holidays. There is a large contingent of trade buyers uptown to whom this new enterprise should prove a great convenience. The store will have an area of about 10,000 square feet.

WASHINGTON.

William J. Galt, formerly employed by Becker, in Philadelphia, is now with George C. Shaffer. George C. Dalgleish, of the same store, is away on a week's vacation.

Albert Schnell, manager for the Leo Niessen Company, has returned from a short visit to Atlantic City. He made the trip accompanied by Mrs. Schnell in their automobile.

Lilium regale, a new offering in this market, is meeting with considerable popularity and has been in very good demand since its arrival. This new lily, an outdoor one, seems to be supplanting longiflorum lilies for funeral work at this time, whether because of its novelty or general usefulness has not yet been generally determined, but it looks very good. The stock is being marketed here through the S. S. Pennock-Meehan Company.

The prosperity wave seems to have hit the store of William Marche for extensive improvements are there being undertaken in addition to the erection on his property in Hyattsville, Md., of one greenhouse 35x125 feet and another house the same depth and 12 feet wide. The store, at 14th and H streets, is quite small. An expenditure of some \$2,000, however, is to procure the erection of a new front which will extend beyond the present front about three feet and be 20 feet in length.

Dallas, Tex.—A reception was extended to Secretary John Young, of the S. A. F., by the florists of Dallas and other localities in Texas, on Monday evening, July 17, at the Oriental Hotel.

CINCINNATI.

A. J. Gear left on Tuesday on a six weeks' trip to Idaho and Spokane, Wash.

Mr. and Mrs. Gus Adrian, Jr., have returned from their honeymoon spent at the Cheneaux.

Frank Ball, formerly of this city, is now with Lester F. Benson, of Indianapolis, Ind.

Mr. and Mrs. J. T. Conger, of Hartwell, this city, have returned after two weeks spent at Wichita, Kansas and Chicago.

CLUB AND SOCIETY NOTES.

At the annual sweet pea show in Worcester, Mass., last week, the baskets, table centerpieces and vases arranged for effect added greatly to the charm of the exhibition. These were done principally by ladies. Japan irises from Allen J. Jenkins were very fine.

The fourth annual summer convention of the Illinois State Horticultural Society will be held at The Orchards of A. L. McClay, near Roodhouse, Tuesday, August 1, 1916. Orchard management seems to be the only horticultural topic in which this society is interested.

The annual exhibition of flowers, fruits and vegetables under the auspices of the Andover Gardeners' Club, the Andover Village Improvement Society and the Andover Guild, will be held in the town hall, Andover, Mass., on Sept. 8 and 9. Numerous prizes are offered for asters, dahlias, perennial garden flowers, etc.

At the annual meeting of the Newport Garden Club, held at the residence of Mrs. J. J. Wysong on Ochre point, the following officers and governing board were re-elected:

President Mrs. Charles F. Hoffman.
Vice-President Mrs. Thomas J. Emery.

Secretary-Treasurer — Mrs. Frederick Pearson.

Members of the Board Mrs. George Lothrop Bradley, Mrs. Elisha Dyer, Jr., Mrs. Thomas J. Emery, Mrs. G. Richmond Fearing, Jr., Mrs. William Grosvenor, Mrs. Lawrence L. Gillespie, Mrs. Charles F. Hoffman, Mrs. Pembroke Jones, Mrs. Fred

erick Pearson, Mrs. Hamilton Rice, Mrs. William G. Weld, Mrs. J. J. Wysong.

The offer of the Hilltop Inn grounds for the annual mid-summer flower show, to be held with the Newport Horticultural Society, August 17-19, was accepted. This promises to be the best flower show in size and importance of exhibits ever held in Newport.

Last Saturday evening about thirty members of the Violet Growers Mutual Association, Rhinebeck, N. Y., assembled at the Town Hall for their annual meeting. President Charles R. Traver presided and after routine business the election of officers was held. All the directors were re-elected with the exception of A. C. Toof, whose place was taken by Fred Moore of Red Hook. All the officers including F. L. Asher, secretary and treasurer, and Charles R. Traver, president, were re-elected. Mr. Asher reported seventy-seven members for last year which is less than usual. Originally there were nearly twice that number of growers but many have discontinued their efforts and are now engaged in other lines of business. An interesting fact was brought out that the Association last season paid over \$10,000.00 for coal which means about 2,000 tons. A discussion on publicity for "Rhinebeck Violets" was brought about by the remarks of Fred Moore who favored a picnic and Nelson Coon who favored advertising in the trade papers.

NEW CORPORATIONS.

Hartford, Ct.—Rose Hill Floral Co., capital stock, \$50,000. Incorporators, Louis L. Barton, A. P. Pitner and Ralph M. Grant.

York, Pa.—Anderson Bros. Co., seedsmen, capital stock \$40,000. Incorporators, James, James T. and Wm. J. Anderson.

Asheville, N. C.—Stricker Seed Co., 22 West College street, capital stock, \$30,000. Incorporators, M. F. Hoffman, Mrs. Annie D. Martin, Stephen and J. G. Adams, J. G. Merriman and L. R. Stricker.

Flower Market Reports

BOSTON Very dull indeed as compared with the old-style July is the flower trade of Boston this week. The writer has recently seen the rose product elsewhere and can safely say that the roses in this market at the present time are distinctly superior, a fact due no doubt in part to the summer resort demand which in years past has got the Boston grower into the habit of trying to turn out a presentable summer product. But, thus far, their industry this year in that respect meets with little appreciation, although it is high time the beaches began to make a noise like an order occasionally. Carnations are, naturally, of low quality just now, but there are at least two varieties that are producing creditable flowers—Morning Glow and The Queen. Gladioli are beginning to come along rapidly and values are downward tending. Asters are not yet up to those seen in other markets farther south, but they look promising. Lily of the valley from Newport is uncommonly fine for a summer crop. In the present dearth of business a good many clerks are taking a few holidays as well as the proprietors. They will hardly be missed while things remain as they are.

CHICAGO Summers of other years have had their records for heat broken the past week, and stock has, of course, suffered. The demand is comparatively light. Carnations are showing the mid-summer size and further diminishing week by week. Among the deep pink, Ward is keeping its size and color well. Roses are getting soft and losing color and even Mrs. Russell, which till now has been so bright, is getting more or less off color. There are some very good asters coming now but more that are small. Gladioli are in fair demand and there is a good supply to choose from. Good sweet peas are scarce. There is a good supply of cattleyas and lilies and lily of the valley.

CINCINNATI For July business business is very good. Receipts are not very large and generally are taken up very readily. Shipping business is fair. Early asters are coming in strong. Gladioli are in a fair supply but more of the lighter shades might be used. Roses are in a fair supply but the larger part are very short stemmed. Other offerings include lilies, which are in good supply. Snapdragon and water lilies.

NEW YORK Those who have been hoping for an early improvement in flower market conditions are not likely to find anything in the situation this week to encourage them in their hopes. The actual sales of flowers in the wholesale district have probably aggregated smaller this week than in any similar period during the present season. The midsummer pinch of former times, due to the scarcity of roses, carnations and a few other staples, is no longer possible since the growers have taken to outdoor catch crops to fill in the gap, and the retailer who manages to capture a good substantial summer order finds no longer any difficulty in

EASTER LILIES

One of the summer flowers that we can recommend and one of the summer flowers that we are strong on, splendid quality, good stems.

securing abundant material with which to fill it acceptably. So the stores buy in dribbles, "from hand to mouth," and wholesalers are glad to get even that. The principal buying, as well as the principal haranguing and pleading on prices is done by the Greek florists, who somehow manage to hook up a sale for considerable stock every day. Roses are minute as to flower, short as to stem and brief as to life. Lily of the valley is generally of the lowest type. Longiflorum lilies run of miserable quality. Carnations have vanished. Cattleys are not plentiful but even the best gigas flowers are not wanted at any price. Gladioli are coming in very heavy and asters of excellent quality are heaped high on the sale tables. Other garden stuff seen on all sides includes hydrangeas, gail-lardias, coreopsis, cornflowers, marigolds, scabiosa, zinnias, annual and perennial larkspurs, and many other things which florists in former times seldom troubled themselves about. Even the dahlia crop has already begun to materialize and some very good blooms are seen.

PHILADELPHIA There is nothing new to report on the cut flower market here since our last week's resume. The tide ebbs lower and lower and one half of the standard bearers are off on vacation. There's a bit of a stir every morning up to 10 A. M. but after that the lone holders of the forts stand around and swap stories. In most of the places one half the reduced forces are allowed the afternoon off. These lads ought to consider themselves lucky. If they were working for dry goods houses, department stores and such places they'd get "fired" —and hired back again (maybe) when business picked up.

PITTSBURGH Business continues really remarkably good for the mid-summer season and the majority of stock is just about what could be expected during a two weeks' period of blazing skies. Roses and carnations are most inferior, while both lilies and gladioli are pronounced "fine." Asters, some of very good quality and

Flower Market Reports

(Continued from page 11.)

water lilies are coming in nicely. For these latter, however, there is poor demand.

The market during ST. LOUIS these hot days is pretty well demoralized. Flowers are of poor quality, demand slow and prices at their lowest point. Funeral work is about the only thing that keeps the doors open for business. Roses are poor in color and short in stem. The same may be said of carnations. Other stock brings little nowadays.

Business in the national capital is literally shot to pieces and were it not for the funeral work and the occasional sale of cut flowers all of the dealers could readily shut up shop and take an extended vacation. It is claimed that there is a shortage of good stock but no one misses it. The carnations that are coming in are remarkably good for this season. Roses are not very good and this is particularly true of flowers shipped in from the North which reach here in very bad shape. Asters and dahlias are increasing in quantity although the latter are not yet very good and shatter when touched.

Obituary

Robert W. Hutchinson.

The funeral services for Robert W. Hutchinson, the well-known landscape gardener for the Pennsylvania Lines West, took place last Sunday evening at his home in Sewickley, Pa. His death occurred suddenly the previous Tuesday at Palm Beach, Florida. Mr. Hutchinson was born at Terre Haute, Indiana, on November fifth, 1862. In 1881 he was employed as a brakeman by the Pennsylvania Lines West and in two years later was made station agent at Jacks Run. He was appointed landscape gardener on March 1, 1885, and has lived in Sewickley since 1886.

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage as regards prices and quality to place your order with us.

Soliciting your order through this ad cuts down the overhead selling expenses and you positively get lower prices and better quality. Our terms are liberal and are a guarantee that you get a square deal, all bulbs guaranteed true to name or money refunded.

Write us and upon request we will mail you our booklet giving prices for New York or Chicago, and we also cheerfully furnish you with any information that may be desired. Those of our friends who will mail us a list of their requirements will find it has paid them to do so.

Awaiting to hear from you at your convenience, we remain,
Yours very truly,
Westerbeck & Klynn
Sassenheim, Holland.

WAYCROSS, GA.

GRUBS IN LAWN.

Editor HORTICULTURE,

Dear Sir:—Will you answer the following in your valuable paper? My lawn is full of a small grub like a caterpillar, with a golden-colored head. It kills the grass very fast by eating the roots. What is the cause, and cure for same?

BROOKLYN.

The grub complained of is the larva of a beetle, very probably the May beetle or June bug as sometimes called. The eggs are laid in the ground and the grubs live in the soil for a period of three years before emerging. The best remedy is to plow or dig in the fall and give chickens or ducks a chance to feed on the grubs. A good dose of lime mixed into the soil will finish what the chickens do not find. Kerosene emulsion applied to the lawn will usually be found a good remedy. If the soil is light sometimes the use of a heavy roller on the lawn will crush the grubs.

DURING RECESS

Gardeners' and Florists' Club of Boston.

The annual picnic of this Club was held at Cunningham Park, East Milton, on Thursday, July 27, 1916. These annual picnics draw an increasing attendance each year, and the committee in charge had spared no effort to make this year's event the finest in every respect the Club has yet held. Unfortunately the day was lowering and uncomfortable and about noon a torrent of rain lasting for an hour drove the picnickers to shelter. They repaired to the gymnasium where music, singing and dancing helped to pass the time until the storm ceased and the interrupted games could be resumed. The games were under the direction of the following:

Ringmaster, W. J. Kennedy; Starter, Peter M. Miller; Clerk, W. N. Craig. Umpires—Men's Baseball, Frank Edgar and A. K. Rogers; Ladies' Baseball, Frank Edgar and A. K. Rogers; Boys' Baseball, J. P. A. Guérineau; Soccer Football, F. E. Palmer.

Judges: W. J. Patterson, W. C. Rust, H. H. Bartsch, A. K. Rogers, W. H. Judd, George W. Hamer, John G. Duguid, Robert Cameron, Frank Edgar, Kenneth Finlayson, F. E. Palmer, Charles Holbrow.

List of Winners.

1—Baseball: Commercial Growers vs. Private Gardeners; Captains: William Mix, Commercial; W. J. Iliffe, Private.

Won by Private Gardeners. Score, 3-2.
2—Quoit Match: Individual 1st, 2nd, and 3d. prizes. Captain: John F. Duguid.
1st, M. Brown; 2nd, John Duguid.

4—Baseball: Married vs. Single Ladies. Captains: Mrs. John F. Flood and Susan E. Rogers.

Won by Single Ladies. Score, 18-13.
5-100-Yard Race, girls 12 to 14.
1st, Elsie Bartsch; 2nd, Dorothy Palmer.

26-Tug of War: Commercial Growers vs. Private Gardeners. Captains: H. H. Bartsch, John L. Smith.

Won by Private Gardeners.

27-Football (soccer). Captains: John Miller and William J. Collins.

Won by Miller's team. Score, 3-0.

28-50-Yard Race, children under 6.
1st, Walter Costello; 2nd, Frank Duguid.

The ladies' baseball game was excruciatingly funny and proved by far the most popular of all the sports. They used a large inflated ball and after it had rolled in the mud a few times it was hardly an acceptable adjunct for white dresses and delicate hands but the players stuck to the job with commendable courage. The only accident was a blow in the face from a batted ball sustained by a lady who was watching the men's baseball game. The soccer football match developed some phenomenal kicking in which Peter Miller especially excelled.

Florists' Club of Washington, D. C.

The annual outing, held on Wednesday, July 19, at Great Falls, Va., will go down into the club's history as another of the famous events which serve to lighten cares and worries and bring sunshine into the lives of the little ones who participated in the affair. The afternoon broke clear and sufficiently cool to enable the holding of a large number of athletic events. The fun started when the three special and two regular cars, carrying about four hundred people, left Georgetown. In addition to the athletic events, there was a musicale on the pavilion followed by dancing, and in the evening Adolph Gude played Santa Claus and set off a lot of fireworks.

The schedule of games and the winners were as follows:

Potato race for girls 12 years and under—1st prize, Rose Minder; 2d, Lillian Anderson.

Potato race for boys 12 and under—1st, Percy Booth; 2d, Arthur Booth.

Potato race for boys and girls 7 years and under—Catherine and Harry Oldridge, Taylor Anderson and Alice Johnson.

Potato race for ladies—Won by Marjorie Laning.

100-yard dash for men—Frank Weaver, winning \$10 gold piece offered by the Leo Niessen Co.

50-yard dash for ladies—1st, Margaret Shaw, winning Japanese Garden from H. Bayersdorfer & Co., Phila.; 2d, Pearl Shippe, bridal veil from Lion & Co.

100-yard dash for boys 18 years and under—Ernest Robinson.

Three-legged race—E. Cahill and Frank Weaver.

The next event, the 100-yard dash for members only, brought out a big line-up. The winners were, 1st, Samuel Everett; 2d, Harry Ley.

Centipede race—Won by Harry Ley, Frank Weaver, Charles Scarborough and Arthur Shaffer.

Pole vault, prize from H. A. Dreer—Won by Charles Scarborough.

A novelty this year was a game for the ladies called threading the needle which was productive of much amusement. The first prize, from Dreer, \$10 in gold, was won by Mrs. F. M. Blake. Miss Fowler scored second and won the handsome silk parasol offered by George H. Cooke, ex-president of the club.

Putting ball in basket, married women—Mrs. Skinner, winning bird cage and stand offered by Reed & Keller, New York. Among the single women, Isabel Collins won the Pennock-Meehan parasol, and Miss Fowler a bolt of fancy ribbon. In the mixed event, for married and single women, Mrs. Warren Anderson won.

A traveling bag, in the quilt singles, was won by Mr. Soper. Samuel and Robert Soper are each the possessor of a new umbrella as a result of being equally successful in the quilt doubles.

Those who served on the committee were William H. Ernest, chairman; George C. Shaffer, Jake Richards, Harry B. Lewis, Edward S. Schmid,

St. Louis Florist Club Picnic

The 23rd annual picnic of the St. Louis Florist Club was held in Romona Park, July 20th. The day was clear but very hot and the grounds showed badly in need of rain. The crowd numbered nearly 400, and a fine automobile parade was made from the wholesale district out to the park.

Prizes for the affair were donated by Geo. Waldbart, Mrs. Schoenle, J. J. Beneke, G. H. Augermüller, C. Young & Sons Co., F. Sanders, St. Louis Retail Florists' Assn., D. S. Geddis, C. Beyer, J. Bourdet, St. Louis Wholesale Cut Flower Co., Windler Wholesale Floral Co., St. Louis Florist Club, Grimm & Gorley, H. G. Berning, W. C. Smith, St. Louis County Growers' Assn., St. Louis Seed Co., W. C. Smith Wholesale Floral Co., C. A. Kuehn and others.

The winners were as follows:

Pot Throwing—1st, A. Jablonsky, Jr., 2nd, A. Vandevine.

75-yard Dash—1st, K. Ogle; 2nd, A. Von Hoffman, Jr.

50-yard Dash, Boys—1st, L. Weinsberg; 2nd, James Tantill.

50-yard Dash, Men—1st, Joe Hauser; 2nd, J. J. Beneke.

Harem Race—1st, Mrs. A. Jablonsky; 2nd, Mrs. C. Johnson.

Time Walk—1st, Mrs. W. H. Schaefer; 2nd, Mrs. O. N. Sanders.

Needle Threading—1st, Mrs. Geo. Deugs; 2nd, Mrs. Kopp.

Ball Scramble—1st, A. Jablonsky; 2nd, Art. Wettau.

Flag Race—1st, Virginia Cerny; 2nd, Miss Arline Meyer.

Box Fight—1st, Miss V. Richter; 2nd, Miss L. Price.

Egg Race—1st, Arline Meyer; 2nd, Miss M. Kuehn.

Novelty Race—1st, Andy Von Hoffman; 2nd, J. J. Beneke.

The names of the winners in the guessing contests have not been made known as yet.

Ladies' Football Game—All ladies taking part received a box of candy.

Football Game—All men taking part split two boxes of cigars between them.

The ball game was well played and attracted as usual a large crowd. The wholesalers won this time 8 to 7, having met defeat last year.

Lancaster County Florists' Picnic.

Thursday, July 20th, was an ideal day for the afternoon picnic on the shady lawn of our ex-president, B. F. Barr. The committee having it in charge—Elmer Weaver, Rudolph Nagle and Abraham Strickler—had everything planned so well that the affair went off like clock work.

The florists and their friends turned out in goodly numbers, only a few of the florists missing. There was a progressive game of cards, three games of quoit pitching, croquet and bowling

THE VERY NEWEST AND QUICKEST METHOD OF DESTROYING WEEDS, GRASS AND OTHER GROWTH IN GARDEN BEDS, GUTTERS, TENNIS COURTS, DRIVEWAYS, ETC.

This fluid absolutely destroys all weeds and other growth wherever applied, and its effect on the ground prevents the growth of fresh ones for a year and thus saves a great deal of time and labor, as no cutting, hoeing or hauling away of the weeds is required.

We manufacture the strongest line of DISINFECTANTS on the market

PINO-LYPTOL

WEED KILLER

on the green—all this for the older people—and there were potato races, bag races, three-legged races and every imaginable form of amusement for the youngsters with prizes for each event.

Mr. and Mrs. Barr make an excellent host and hostess and every comfort is looked after. The Barr home is everything that any mortal could crave for and there was simply nothing lacking toward the success of the picnic.

The florist end of the party of course made an inspection of the grounds and the nursery end of the farm. Mr. Barr is working up a stock of hardy perennials and has an ideal place to demonstrate their value on his lawn. The farm end of this place is equally interesting and his stock of blooded cattle and acres of farm crops made quite an interesting side show.

The following list of visiting florists is as near complete as the writer could get to it. If any one is missed blame it to my love for the various sports indulged in. T. J. Nolan of the King Construction Co., Dennis T. Connor, of Lord & Burnham Co., and daughter, E. J. Fancourt of the S. S. Pennock-Meehan Co., Mr. and Mrs. Percy Bernard and Mr. and Mrs. E. C. Marshall of Chester County.

At an informal meeting of the Club in the evening on the porch, it was decided to hold the flower show this fall in the Heimenze Auditorium on Nov. 9th, 10th and 11th, one-half of the profits to be donated toward the procuring of an armory site for Lancaster big enough to enable us to invite conventions to this city.

ALBERT M. HERR.

Dutchess County Florists.

Thirty-eight members of the Dutchess County Floricultural Society of which William G. Saltford of Poughkeepsie is president, were guests on July 19 of George and David Burgevin, of Kingston, where they visited the extensive plant of Vallentin Burgevin, Inc. Refreshments were served and about 1 o'clock the visitors were taken in automobiles around the Ashokan dam, and on their return, autoed to Lake Katrine where a clam bake and dinner was enjoyed.

Waretown Rod and Gun Club.

Commodore Westcott's bungalow was graced for three days (from the 21st to the 23rd inst.) with a distinguished company from Washington, under the guidance of William F. Gude. Among those present were Hon. Wm. Kettner, California, and Wm. E. Kenney, Wisconsin. Among the lesser lights (although he will object when he hears this) was Walter Brownley of Washington. The party spent a very pleasant time, enjoying the sea breezes and rural delights of this unspoiled

fashioned retreat's harbor—and farmers' rest—where the primitive has not yet merged into the ultimate and is the haven of rest for poetic souls. They will surely yearn to return again to this hallowed spot provided the buzz heard "oft in the stilly night was not too strong.

G. C. W.

Essex County Florists' Club.

The third annual outing of the Essex County Florist Club will take place on Thursday, Aug. 3, at Berkeley Heights, N. J. James J. McLaughlin, 181 Clinton avenue, Newark, N. J., is the secretary.

TO ERADICATE WILD ONION.

Along the Atlantic coast region, from Massachusetts to Georgia and as far inland as Missouri, the wild onion or wild garlic is found as one of the most noxious weeds. It is most troublesome in small grain fields, lawns, and pastures.

It is highly important to know how this weed grows, because on a knowledge of its life habits is based the best methods for its control or eradication.

In cultivated fields the plants are likely to be scattered, but in pastures, lawns, and other places that have not been disturbed for several years the plants grow in clusters or clumps. The wild onion ripens in June or July and produces on the top of the stem. 1½ to 3½ feet high, a cluster or clusters of aerial bulblets, sometimes erroneously called seeds. The underground portion contains from two to six newly formed bulbs located at the base of a plant. The aerial bulblets have soft shells and germinate in the fall. Some of the underground bulbs have soft shells and germinate in the fall, while others have hard shells and remain dormant through the winter months, germinating the following spring.

To rid a cultivated field of wild onions the work must be started in the fall. The object of this work is to destroy the plants from the soft-shell bulbs before they have advanced far enough to produce new bulbs. As soon as the new plants are 12 to 15 inches high, or during October and November in the South and November and December in the North, the owner should plow his land fairly deep, being careful to turn under all the onion tops. A plow with a jointer attached to the beam will be found convenient for this operation. Disking the land before it is plowed also helps to bury the tops. This method will get rid of the plants which have grown from the soft-shell bulbs.

It now remains to get rid of the next crop that may be expected from the slower germinating, hard-shell

bulbs during the coming spring and summer. Next spring, therefore, the field should be planted in a cultivated crop, corn in check rows being best. Another shallow plowing may be necessary in the spring, but ordinarily a disking or two previous to planting will suffice. From the time the farmer is able to go on his land in the spring he should make every effort to keep the garlic from making top growth. The best way to do this is to cut off

the tops with a cultivator of the sweep type.

There still may be a few plants carried over by hard-shell bulbs which have been very slow in germinating. The farmer, therefore, should be prepared to repeat the deep plowing late in the fall, and to use a cleanly cultivated crop the second spring. This treatment, which can be carried out with little extra labor and expense, has proved in practice an almost certain method of eradicating wild onions in two years.

Experience has shown that in the case of small grains on infested fields if plowing is delayed until a late date in the fall and the land is then planted to small grain, only a few onion plants will ripen their early bulblets by harvest time the following summer. Since the plowing to be effective against the onion must be done at such a late date as to interfere with the best development of fall-sown grains, spring grains should be planted where it is possible. If fall grain must be sown the farmer should bear in mind that the delayed planting probably will reduce the yield.

Grain raisers in wild-onion districts should be particularly careful to keep their seed free from the bulblets. This can be accomplished by thorough drying before cleaning, as the bulbs when dry are lighter than the grain and can be winnowed out. The safest way, however, is to obtain seed from an outside source where no onion exists or to produce seed grain on a separate patch kept absolutely free from the onion.

In lawns the aerial bulblets are seldom produced because the tops are kept cut back with the lawn mower, but the plant propagates by producing underground bulbs and is most often found growing in clusters. To eradicate from lawns where the onions are not too plentiful, a good plan is to dig out the entire cluster with the mattock when the soil is soft. The hole thus made should be filled with soil and planted to grass seed. Another successful method for killing onions in lawns is by the use of chemical plant poisons, as coal-tar creosote oil or carbon bisulphide. A small amount of the poison should be applied directly to each cluster. This can best be done by using a small spring-bottom oil can. After the onions are dead the bare spot left should be seeded to grass.

FLORICULTURE IN OHIO STATE UNIVERSITY.

Mr. Alfred Vivian, Dean of the University, writes that the College of Agriculture of Ohio State University is undertaking to develop the work of instruction in Floriculture in a much more elaborate way than has been possible in the past. The Floriculture business of Ohio is very large, but up to the present time, it has not been possible to give this work the consideration it deserves for lack of proper facilities. The new horticultural building, with its excellent greenhouse equipment, now makes it possible for the College to take up this work and put it on a firm basis. Alfred C. Hottes, of Cornell University, has been engaged to take charge of the development of the work in Floriculture.

Mr. Hottes received his secondary education in the high schools of Ithaca, N. Y., and was graduated from Cornell University in 1913, receiving his Master's degree in the following year. Since that time he has been instructor in floriculture at Cornell University. He is enthusiastic regarding the possibilities of floriculture in Ohio, and comes to the College with the heartiest recommendations of such men as Dean L. H. Bailey. He is a member of the Nomenclature Committee of the American Gladiolus Society.

S. JACOBS & SONS

1359-1385 Flushing Avenue BROOKLYN, N. Y.

This isn't just a cast iron sectional water boiler with hub connections for cracked joints. It's more than that—it's a Hitchings greenhouse boiler. A boiler made for greenhouses. Don't get it confused with a radiator. In one boiler room you do a winter's greenhouse work. It's an investment that will pay for itself.

Here is a Hitchings water boiler with tapped openings for screw joints. You can have as many openings as you want every section if you say so, between the front and rear. And remember that every section is held together by slots in back. It's the only way to get a tight joint. Even Mr. Hitchings has used it.

Some Hot-Point Pointers

If this year is like most years, there are just 45 days before frost. That is, reckoning on the way it's been for several years in New York and 300 miles round about. Winter moves with leaden feet, but Summer takes wings. So don't jolly yourself along into thinking there's plenty of time to have us go over your heating. Don't try to be tooxy and think you are saving interest on your money by not buying your boiler until the last minute and then getting thirty days additional time before you have to pay for it.

This is one of the short tie bolts that bolts the sections together. Makes set up; additions to; or replacing sections a simple matter. A decided improvement over the old long tie bolt method.

On Heating Do-Nows

Don't save one way and risk losing another. A month or so's interest on your money is a joke in comparison with the injury or loss of your crop. We are just plain, common sense business men who are trying to do all possible to overcome the maddening last minute rush orders for boilers, and overcome frost losses. I like everything else in business—it helps our pocket book, only because it helps yours. Order your boiler. Do it now.

NEW CROP SEED READY FOR DELIVERY NOW

All our Stocks are re-selected, and can be thoroughly relied upon to come true to color and description.

NEW SENSATIONAL AUSTRALIAN VARIETIES

The following varieties are, without doubt, the greatest and most valuable novelties introduced since the famous Yarrawa Spencer marked the commencement of a new era in Winter Sweet Peas.

NOW READY FOR DELIVERY

CONCORD CHARM
White with blue white wings. Heliotrope standard.

CONCORD COUNTESS
An ideal pink, lighter tint at base of standard and wings.

CONCORD COQUETTE
Mottled rosy carmine on white ground.

CONCORD DAYBREAK
Cream with standard heavily edged buff-pink.

CONCORD EMPEROR
Rich crimson-red variety.

CONCORD PURPLE
Mauve purple, changing to purple-blue.

CONCORD RADIANCE
Rosy magenta.

CONCORD WINSOME
Pink, tinted lavender.

COERULEA
Delicate sky-blue.

RUBY
A glowing light crimson-scarlet color.

SALMONEA
A rich rosy salmon variety of great merit.

Prices of all the foregoing: Packet of 18 seeds, 35 cents; 5 packets, \$1.50.

Yarrawa

Bright rose-pink, with light wings. Seed sown early in September will flower about December 1, and bloom profusely and continuously until May. They are borne usually in fours on extra-long, strong stems. Awarded Certificate of Merit, International Flower Show, New York, 1914, and the Pennsylvania Horticultural Society, March, 1915.

BURPEE'S EARLY OR WINTER-FLOWERING SPENCERS

The House of Burpee has long been recognized as "American Headquarters for Sweet Peas," and our introduction of these Fordhook Strains of Winter Flowering Spencers marks an era in commercial Sweet Pea growing.

The Novelties offered below, excepting Yarrowa, are the results of crosses made at our Fordhook Farms during the past seven seasons. All stocks are grown at our Floradale Farm, "The California Home of Sweet Peas."

FORDHOOK PINK AND WHITE:—A most popular Winter Flowering Spencer. A color that is always in demand, similar to the old Blanch Ferry. Bright rosy pink standard, wings almost pure white. The immense flowers measure 2½ inches in diameter and are almost perfect in form. A very early, free and continuous bloomer, awarded a Certificate of Merit at the Spring Show of the Pennsylvania Horticultural Society, Philadelphia, March, 1915, and the American Sweet Pea Society, San Francisco, June, 1916. ¼ oz., \$1.25; ½ oz., \$2.00; oz., \$3.50.

FORDHOOK PINK:—This is a distinct shade of pink suffused with lavender throughout. Flowers of large size, exquisitely wavy, produced in threes and fours on long stems. ¼ oz., 40c.; ½ oz., 75c.; oz., \$1.25; 1 lb., \$3.50; 1 ½ lb., \$6.25; 1 lb., \$12.70.

FORDHOOK ROSE:—Introduced by us in 1915. Flowers of largest size usually borne in threes and fours. A charming shade of rosy carmine. Awarded a Certificate of Merit at the International Show, New York, March, 1915, and the Spring Show of the Pennsylvania Horticultural Society, Philadelphia, March, 1915. ¼ oz., 50c.; ½ oz., 85c.; oz., \$1.50; ¼ lb., \$4.00; ½ lb., \$7.50; 1 lb., \$15.00.

YARROWA:—This magnificent Australian variety has proved its unusual merit with commercial growers in all parts of the country. It has an exceptional reputation as a sure-money maker. First exhibited by us at the great International Show in New York, March, 1914, and awarded a Certificate of Merit by the Pennsylvania Horticultural Society, March, 1915. Flowers exquisitely wavy, averaging 2½ inches in diameter, many of them being duplex or double. A bright rose pink with clear creamy base. ¼ oz., 35c.; ½ oz., 60c.; oz., \$1.00; 1 lb., \$2.75; 1 ½ lb., \$5.00; 1 lb., \$10.00.

Our Special Leaflet on Winter Flowering Sweet Peas free on application.

New Early Flowering Giant Pansies Or Winter Blooming

An entirely new and distinct strain of Pansies. The main advantage of these new Pansies over all hitherto existing Pansies is the extreme earliness of flowering and its unusual hardiness, which enables them to withstand quite severe Winters, and to bloom right on into the Summer. Sown at the same time as other Pansies, they begin flowering the early part of March or as soon as the snow is off the ground, many times having four or five large flowers to a plant, when all other Pansies are only showing buds. The flowers are large, well formed and fragrant. They are highly recommended for Autumn planting on graves, and for very early bedding, as well as for early cut flowers.

14. **WINTER SUN.** Golden yellow with dark eye.
15. **ICE KING.** Silvery white with dark blue eye.
16. **CELESTIAL QUEEN.** Light or sky blue.
17. **CHARM OF MARCH.** Dark velvety blue.
18. **MIXED.** The above four colors with other shades and variations.

EACH COLOR SEPARATE OR MIXED.

500 seeds 50c., 1000 seeds \$1.00, 1/8 oz. \$2.00, 1/4 oz. \$3.75, 1 oz. \$15.00.

For list and price of other Kenilworth Pansy Seed see my ad of July 29.

FREE OFFER RAINBOW is a mixture of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every \$1.00 worth of Pansy seed I will send, free, 1000 seeds of Rainbow and with other amounts in like proportion.

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—*Lucy*

Cattleya gigas

These do well in a mixture of soft fibrous heat and sphagnum moss, intermixed. I have seen some growers successfully use nothing but moderately coarse osmunda fiber. Give the pans or baskets half their depth of clean crocks with a layer of charcoal on top and get the compost firm all around and between the roots. This orchid requires a little more warmth than most of the other species. Should any portion of the plant be unsteady tie it to a neat stick to hold it firm until the new roots get a grip. Be very careful about watering for four or five weeks, but when they are once re-established they will require an unstinted amount of water. All cattleyas delight in a liberal supply of pure air, but without cold draughts.

Repairing

Now is the time to do any repairing to houses, boilers, piping and glass. During the busy season of planting, cleaning up etc., this work cannot be attended to by the ordinary help and it would be more profitable to call in a tradesman than to have the work drag along until cold weather sets in. Where the putty is in very bad condition it is sometimes more profitable to lift out the glass, repair and repaint the sash bars and reset the glass. It being impossible to produce good stock in houses which are draughty and leaky, any repairs necessary to put them into good condition should be done while the wood is dry and the weather such that a few hours' exposure to the open air would not affect the general health of the plants. Ventilators should be re-adjusted and the machinery put into good working order, also the boilers.

Feeding Chrysanthemums

Where liquid manure is used with prudent care you will find a decided difference between the size and color of flowers where it is used and where it is not. It also gives that black green foliage and heavy stem which go with an ideal flower. It makes no difference how rich the soil was when the benches were filled, they always need feeding from the time the buds make their appearance, and until they begin to show color, when all stimulants should cease. Where the stock is in good condition you can make up some liquid by placing in a barrel of from 45 to 48 gallons of water a half a bushel of cow manure, or if sheep manure, half the quantity will be enough. There is no better fertilizing element than

liquid cow or sheep manure. Let it stand for a day or two so the water will be well impregnated before being applied. It is better for the average grower to start with one application a week and then increase it to twice a week and even to three times.

Geranium Cuttings

Where a big lot of geraniums are to be grown for next year start as early as now to take cuttings, thus giving the plants time to make up another good batch in September. Always trim the cuttings up well and cut below a leaf joint. After they are placed in sand give them a good soaking of water and break only the direct rays of the sun from them. They are better when kept slightly on the dry side until they begin to root as there is then less likelihood of their damping off. Give a thorough watering and then wait until they are dry before giving any more. Grow in a light airy house and by the middle of October you will be able to take a cutting from every one. In about a month they should be well rooted when they can be potted firmly into $2\frac{1}{2}$ inch pots, using any good loamy soil.

Winter Flowering Sweet Peas

Procure the best known varieties in white, pink, lavender and scarlet. Sweet peas have been so greatly improved of late that it is possible to have them do fairly well during the early winter now. Sweet peas to do their best should be in a house by themselves and have at least six feet headroom. They will need at least four feet between the rows and do not sow the seed too thick. Sod that was piled up last fall will make a very congenial soil to use. Make the compost rich by adding to every three loads of soil one load of well rotted cow manure and a pailful of bone dust. These plants like a syringing on all bright days, and an even amount of moisture at the roots.

Reminders

Get the propagating bed ready by renewing the drainage and sand.

Look after nephrolepis that are planted out on a bench. Pot the largest now so they will be well established for early sales.

Give plenty of ventilation to calceolarias, cinerarias, cyclamen, primulas, etc.

See that young herbaceous stock—seedlings or otherwise—have careful culture and attention.

Next Week:—Poinsettias; Primulas; Mignonette for Mid-Winter; Paper White Narcissi; Preparing Soil; Reminders.

Campanulas

No genus of plants has been more useful in horticulture than the Campanulas, nor, in fact, are there many genera more universally distributed, there being some 240 species, and poor indeed is the garden that lacks at least one member of the beautiful Bell Flowers.

Glancing through the catalogues of the American nurserymen we note that there is a surprising lack of the most desirable varieties. Seedsmen quote quite a number which the nurserymen fail to list, but all together the material to be had in this country is very meager.

In mentioning the various species and their varieties we think first of those which are suitable for the flower garden proper. For such a situation *C. glomerata* is a very useful plant growing from 1 to 2 feet in height with beautiful blue flowers borne in terminal heads. *C. macrostyla*, dull purple, the largest-styled of the Bell-flowers is an annual, attaining a height of about 18 inches. In *C. Medium*, the Canterbury Bells, we have a moderately tall species, biennial, and bearing numerous campanulate purple flowers. There are numerous hybrids, even more valuable than the type and bearing white, blue and pink flowers. The variety *calycanthema*, "Cup and Saucers Bellflower," is perhaps one of the best. There is a variety, *C. Medium Wiegandii* with yellow foliage and blue flowers which makes a striking contrast, but this is more of a plant for the "curiosity garden." The species and its varieties may be propagated from seed sown in the open ground in early summer. Plants started in flats inside, in early March and transplanted to permanent locations in May will flower the first year, and may thus be used as annuals. The number and quality of the flowers will not be a good, however, as in the second year. Plants dug in before the first frost, and potted make fine house plants for the autumn, and may even be carried over to bloom the next spring.

Campanula isophylla is a very dwarf species, and suitable for use only near the front of an herbaceous border. The pale blue flowers are often an inch or more across and make a wonderful showing in sun or partial shade. There is a white form, *alba*, which is very free-flowering, and also a soft and woolly-leaved variety, known as *C. Mayii*. *C. isophylla* is equally good in the rock garden, hanging basket, or window box.

The majority of Campanulas are most suitable for rock work, among which might be mentioned *C. Allioni*, a perennial with nodding purple flowers, about an inch across, one to a stem. Here and there will be found a white one. There appears to be no hybrid of this species. *C. pulla*, one of the handsomest of rock plants, is a showy perennial with flowers of deep rich violet, in such numbers as to completely hide the foliage. A variety, *pulloides*, is even finer with flowers of glistening violet. It is supposed to be a hybrid between *C. pulla* and *C. turbinata*, but has kept the habit of the former. Another very dwarf species is *C. pusilla*, with small blue flowers, very freely produced. There is a white form, *alba*, and a greyish blue one called *Miss Willmott* which is probably the finest colored of all the Campanulas. No finer plant could

be grown in American gardens yet how few nurserymen list it.

Campanula carpatica, the well known Carpathian Harebell, should not be omitted in any garden. Among its hybrids may be mentioned *alba*, white; *Chad Valley Gem*, light blue China-cup, very pale blue; *Isabel*, rich purple, salver-shaped flowers of striking effect; *White Star*, very large pure white star shaped flowers; *Turbinata*, above mentioned, itself a desirable plant 6 in. in height with open rich blue flowers, while its variety *pallida* is a great improvement with flowers of delicate pale blue color.

Campanula garganica, blue with white centre is very effective massed in rockeries. Of this there are *alba*, white; and *hirsuta*, paler flowered, of trailing habit. *Campanula G. F. Wilson*, a hybrid between *C. pulla* and *C. carpatica* has proved its merit as a rock plant. It bears a profusion of violet blue flowers similar to *C. pulla*. *Portenschlagiana* is one of the best tufted species, with long racemes of blue purple flowers. Its variety *bavarica* is a larger and finer plant. Both are excellent subjects for a wall garden, although their hardiness is questionable in parts of this country.

For the wild garden one of the first plants is *C. lactiflora*, perennial, 3 ft., with delicate pale blue, or milk-white flowers. *C. allariaefolia* is equally good for the wild garden, with nodding white flowers, giving a splendid effect massed in colonies amongst other foliage. *C. persicifolia* is very fine for cutting and some of its varieties give as much as two or three feet of flower. Among the most desirable are "*Coupe d'Azur*" with large semi-double lavender blue flowers on stiff stems freely produced. *Grandiflora* is a good white and *Humosa* a distinct double lavender which lasts a long time when cut. *Moerheimi* is one of the finest semi-double whites.

Campanula pyramidalis, the Chimney Bell Flower makes one of the best pot plants as well as being suitable for the garden and shadier portions of the wild garden. It bears spikes of blue or white flowers in great profusion to a height of from three to five feet, or more.

We list below some of the most desirable varieties according to use, hoping that those which are named will suggest others which have been omitted. Of course it is possible that some of the plants are useful in more

VISITORS AT THE CORNELL ROSE TEST GARDENS

than one list, and in some cases these plants are given their place in each list, but I will confine the lists as much as possible, mentioning the plants in their best classification.

General Garden Use.

C. glomerata, 1-2 ft., blue; *C. macrostyla*, 1 1/2 ft., purple; *C. Medium* and vars., 2-3 ft., blue, pink and white; *C. isophylla*, 3-6 in., pale blue and white; *C. persicifolia* and vars., 2 1/2-4 ft., blue, lavender and white; *C. lactiflora*, 3 ft., milk-white; *C. rotundifolia*, 6-12 in., blue.

Rock Garden.

C. Allioni, 3 in., blue; *C. alpina*, 3-8 in., blue; *C. barbata*, 6-9 in., pale blue, nodding; *C. carpatica* and vars., 1 ft., blue and white; *C. Elatines*, 6 in., bluish purple; *C. fragilis*, 4 in., lavender; *C. garganica*, 3 in., blue and white; *C. G. F. Wilson*, 4 in., violet blue; *C. isophylla* 3-6 in., pale blue and white; *C. rotundifolia*, 6-12 in., blue; *C. pulla*, 3 in., deep rich violet; *C. pusilla*, 4-6 in., blue; *C. pulloides*, 3-5 in., deep glistening violet.

Herbaceous Border

C. carpatica, 1 ft., blue and white; *C. glomerata*, 1-2 ft., blue; *C. grandis*, 1-1 1/2 ft., blue; *C. medium* and vars., 2-3 ft., blue, pink and white; *C. persicifolia*, 2 1/2-4 ft., blue, lavender and white; *C. punctata*, 1 ft., white, spotted purplish; *C. pyramidalis*, 4-5 ft., blue and white; *C. rotundifolia*, 6-12 in., blue; *C. sarmatica*, 1-2 ft., pale blue; *C. Van Houttei*, 2 ft., indigo or violet.

Wild Garden.

C. alliariaefolia, 1 1/2-2 ft., white; *C. celtidifolia*, 2 1/2-6 ft., pale blue; *C. lactiflora*, 3 ft., milk-white; *C. macrantha*, 3E-4 ft., dark blue; *C. Rapunculoides*, 2-3 ft., lilac; *C. rotundifolia*, 6-12 in., blue; *C. persicifolia*, 2-3 ft., blue and white.

Window and Pot Culture.

C. Medium and vars., 2-3 ft., blue, pink and white; *C. Portenschlagiana*, 6 in., blue purple; *C. persicifolia*, 2 1/2-4 ft., blue, lavender and white; *C. pulla*, 3 in., deep rich violet; *C. pyramidalis*, 4-5 ft., blue and white.

Curiosities.

C. punctata, 1 ft., white spotted purplish; *C. macrostyla*, 1-2 ft., pale purple; *C. Zoysii*, 3-4 in., azure blue; *C. rotundifolia* var. *soldanellaeflora*, 6-12 in., blue.

Campanulas demand a good garden loam, in some cases free from all traces of lime, and do best in partial shade. They may be raised from seed sown in the open ground in May or from the greenhouse, transplanted in May. They should be lightly sown and very lightly covered, kept near the light at about 60 degrees, shading them during germination at mid-day. Watering should be carefully done, especially during dark and damp weather. As soon as the seedlings are large enough to handle they should be pricked off and when grown should be gradually hardened off before transplanting to the open ground. The choice varieties cannot be expected to come true from seed and the best way to handle them is by cuttings or division. Some varieties are not possible to divide and cuttings will have to be used to increase the stock. Cuttings and divisions should be made in early spring.

Winter covering should be provided to all Campanulas. South of New York this may consist merely of evergreen boughs, but north of that point it is well to provide an ample covering of leaves, at least two inches thick. All covering should be put on after the ground has frozen and should not be removed until there is little danger of the thermometer going below 20 at night. Removing the covering from plants too early in the spring is often the cause of loss of valuable species, for with the first warmth of spring they start into growth, only to be killed back by the first hard frost.

Jamaica Plain, Mass.

Potentilla

POTENTILLA NEPALENSIS, MISS WILLMOTT.

Confronted with well grown specimens of the various new garden hybrids of potentillas the interest of the average plant lover is aroused at once. The foliage, in form digitately three to seven foliolate, in some instances resembling strawberry leaves in miniature, is ornamental and resistant. In habit of growth most species are spreading at the base, ascending at the ends and when fully developed appear in handsome loose bush shape requiring little or no staking. Adorned with their fair sized single or double blossoms in brilliant tints of red or golden yellow the desire is there to acquire and try a few and I am not aware of any instance where the purchase has been regretted. The bowers at no time appear in the profusion necessary for a real color mass effects but the flowering season mostly extends from June until frost.

Potentillas will be found very useful subjects for our perennial borders. The new hybrids of cinquefoils, the common name for potentillas, prefer the open sunny exposure. Their strong root system extending deep into the ground enables plantations to withstand excessive heat comparatively well. Not exacting as to soil, they thrive best in high slightly sandy ground. The new garden hybrids are not merely fillers but merit space especially in gardens where variety of material is appreciated. Of the species and varieties I have been growing so far *Potentilla nepalensis* "Miss Willmott" has proved one of the best. Reaching an average height of about 18-inches its many bright cerise single blossoms attract attention. The photograph our illustration was made from indicates the free-flowering habit. Other single varieties of value are *atrosanguinea*, rich crimson; *formosa*, rosy red, and *pyrendica* producing rich golden yellow blossoms. The double flowering hybrids appear in yellow, orange and red shades. Of named varieties I mention as desirable acquisitions, *Vulcan*, rich crimson and *William Rollison* bright vermilion.

For the benefit of rockgarden enthusiasts interested in the low creeping species I wish to call attention to *Potentilla ambigua* and *chrysocraspeda*, both flowering in June, producing dense sheets of color by legions of little yellow blossoms.

The herbaceous cinquefoils referred to in this note are easily raised from seed. The seedlings as a rule do not flower until the second year. Being very hardy, potentillas do not need much of winter protection except in northern states where leaf covering is advisable.

from foreign sources. This is, of course, a local question with which we have nothing to do but it brings home the reflection that human nature is the same the world over, that government officials are guilty of the same stupidity wherever one goes and that London, after all, is not very much different from Washington.

All eyes
on Houston

While it is expected that the northern and eastern territory, from which the S. A. F. draws its largest membership, will be represented by a very small attendance at Houston, yet it is evident that throughout this section a lively interest attaches to the Convention in that city, now close at hand. That the occasion is expected to bring to a head projects and innovations which, if favored by the Convention, are destined to have a serious and far-reaching bearing upon the future policy and activities of the Society, is apparent from the very frequent discussions which one hears and the opinions expressed concerning the Convention's presumable attitude on a number of vital questions, some of which are slated for consideration at this meeting and some of which are not yet. Let us hope that whatever decisions are reached may prove to have been acts of wisdom, resulting in substantial and indisputable benefits from their operation. Otherwise it were better that the Society should "stand pat" for the time being, on the course it has followed and the methods which have gained for it, to say the least, a fair measure of success thus far. Nothing less than obvious necessity can ever justify "constitution tinkering."

The
trend of
events

Possibly the most ominous menace to the old order of things in the National Society is the unqualified success so far of the great National Flower Shows, not only financially and horticulturally, but as social rendezvous for the craft and a source of publicity and profitable business for the trade exhibitors. It seems to be in the minds of not a few energetic members of the Society that this big spring event is rapidly shaping itself to develop into an annual affair, ranking as the greatest American horticultural enterprise of the year, and that sooner or later the Society will be brought by force of circumstance to see that the peculiar conditions and needs which in the past made the mid-summer meetings desirable and popular have, as they declare, practically ceased to exist. So it seems to be a well settled conviction with many that the days of old-fashioned summer conventions and new-fashioned "convention gardens" are already numbered. Manifestly there is unrest within the Society's ranks. The almost revolutionary program cut out for Houston shows this; the talk of the street and of the market places shows it. The trend of events, the unforeseen exigencies that crop up, the accumulation of funds in the treasury and consequent financial pre-eminence of the S. A. F. among kindred organizations, furnishes a fresh stimulus and tends to foster new ambitions, all of which will press for a hearing—if not this year, very soon. The "Grand Old Society" having now lived the allotted span of a generation since its birth, these things are to be expected, and if it can be shown that they are in the line of progress and not merely for the sake of change or to gratify individual caprice they should and undoubtedly will prevail. But it is a safe proposition to hail "from Missouri" in all such matters and he is the true friend of the Society who will insist on being "shown."

Government Inconsistency

A burning question in the British horticultural journals at the present time is the prohibition of bulb imports from Holland and still allowing the Dutchmen the use of the parcel post by which they may send bulbs in small quantities indiscriminately to any address in the United Kingdom. It is not surprising that the British seed and bulb trade are "all het up" over this peculiar ruling which, while it prevents the facilities whereby their customers may get their supply

HORTICULTURAL EDUCATION

How to Make Good Farmers, Gardeners and Florists Out of the Submerged Tenth of the Great Cities.

(Dr. John H. Washburn before the Florists' Club of Philadelphia, July 11, 1916.)

Agricultural Education is supposed to cover a multitude of sins. Some believe it to be some "hocus pocus" that will relieve a farmer of the drudgery of life, that by virtue of this new and wonderful fetic, crops may be produced so abundantly and of such superior quality that they will sell themselves at a figure much higher than the reports in the advertising papers would even dare to suggest. This imaginary wealth will supply labor to the farmer so that all he has to do is direct what is to be done, and by virtue of this so-called agricultural education, financial success is always attained without undue labor or mental and financial consternation. All weather conditions are overcome by the knowledge of Agricultural Meteorology, the farmer can laugh at early frosts and late springs, when it rains and rains until the soil is unfit to work, although the crops should have been in three weeks since. This strange "hocus pocus"—in the minds of some will turn failure into success on the farm. It will relieve all insect pests, all fungus diseases of fruit, stem, root, foliage, settle all questions concerning soil nutrition and in most cases is expected to render equal service to the farmer engaged in any of the branches of animal husbandry, as well as those of agronomy and horticulture. We laugh at the fruitless search of Ponce de Leon, although that search brought to a curious world much accurate knowledge of large portions of a new continent, contributed materially to the knowledge of geography, giving helpful directions to hundreds who afterwards decided to settle on the country he discovered, making this search a lasting service to mankind. Still, he did not find the spring of eternal youth, and to him his time, money and energies were wasted. He was looking for something with purely selfish motives. Had it been found, it surely would have been a curse to posterity, and yet the virtues ascribed to the waters of this imaginary spring were not as wild and impossible a panacea as an Agricultural Education is supposed by many to give to the modern agriculturist.

Unpractical Scientists

We know that there are many professors of agriculture and horticulture, animal industry, floriculture, vegetable gardening, agronomy, plant pathology and other classified divisions of the great business of producing, developing and reproducing things that live, be it either animal or vegetable. Many of these gentlemen have spent a large portion of their lives studying questions relating to this great business; their discoveries and conclusions have been very helpful, directly and indirectly to the business of the farm. And yet many or most of these professors would fail from a business standpoint on the best farm that could be presented to them. If you should present to many of them the best greenhouse

that any of your practical men could select, all equipped for business and with money enough to conduct it until their stock was ready to market, before the end of the second year, financial embarrassment would begin. All this goes to prove that the average man is decidedly mortal and quite incapable of performing the labor of more than one intelligent, industrious man. It takes years of practical work and intelligent observation for a man to become proficient, automatic and safe in the ordinary demands of farm management. In so simple a thing as to properly water a variety of plants in a hothouse without their dampening off requires a manager who when he steps into the house will notice, without consciousness on his part, the temperature and humidity of the air, the condition of the soil, the weather outside, the pressure and consequent rate of ventilation. He knows how much coal he has on his furnace and the amount necessary to furnish steam to neutralize weather conditions. To understand and to be governed unconsciously by the fact that a sunny or cloudy day influences mightily all of the above conditions, requires a training extending over as much time as any of the courses given in our colleges demand, in order to be mastered by the student.

Their Place

These special scientific, capable workers on questions which have a practical application to the business and life of the farmer or horticulturist are often contributing a very important service to the practical man. They teach much of value on a very important yet special subject, and notwithstanding they may be just professors with no more knowledge of practical productive agriculture than a number of watch makers, yet they are a very important factor in the great subject or profession—Agricultural Education. Agricultural schools have proficient, practical men, who have had years of successful experience along their particular lines of work. These men oftentimes are as deficient in the higher branches of science as the scientist is in the practice of agriculture, yet both are of great value as teachers in a school. And as a rule men can't qualify along both advanced science and practical agriculture, because they have only one life-time in which to make this preparation. The very exceptional man—and there are a few who have had the opportunity with ability enough to be proficient in both lines—is such a rare product that he is immediately taken up by our larger institutions of learning and can be found only in too few of these schools.

The National Farm School

The National Farm School was established in 1897 by the Rev. Dr. Joseph Krauskopf for the purpose of educating Jewish boys from the con-

gested districts of our large city, to become farmers. It was his hope that they might lead many others away from these congested districts to live in the country where they could enjoy healthful living conditions and become producers. Later the school was opened to non-Jewish boys and for many years it has been a non-sectarian institution. Dr. Krauskopf has constantly put his energies into the development and support of the school which started with less than a half-dozen pupils and has developed into a large school where the practice and science of farming are taught to more than one hundred pupils. This school has endeavored to be primarily a school of practical agriculture with high school grade of instruction in the sciences as applied to its principal activities. By far the larger portion of our pupils come from the city. The city boy often looks with derision on the country youth as he expresses his unfamiliarity with the marvelous sights and activities when first observed during his early visit to the town. "Rube" is the term applied to this refreshing, unsophisticated mental attitude. And yet, no country boy in the city could be one-half as incapable, more hopelessly awkward, or so utterly helpless as is the city boy when he attempts for the first time to perform the duties of his country cousin: the two boys just mentioned will both depend upon their adaptability to environment to succeed.

Learning the Rudiments

At the National Farm School for the first year, the boy learns the language of farming and to do some of the more simple farm operations, including the using of all hand tools, driving, milking and gardening. The scholastic work for each year grades with that of a high school in science as applied to agricultural problems, with agricultural and horticultural science added. I have been surprised to realize how little a boy will learn of agricultural science during his first year. He does as well as any boy who has never lived on a farm or observed farm work. Our boys have hoed during the first summer over large areas, but few of them realize that the easiest and cheapest time to kill weeds is before they can see them. Most beginners will hoe only when the weeds are large enough to be seen and if an area has no visible weeds they will skip that, so that a few days after such work has been done, it will have to be repeated. We expect a boy at the farm school to learn during his first year about as much agriculture as the farm boy learns in the first dozen years of his life. When a boy enters our school some mischievous upperclassman will give him an order and he will most seriously take a can of gypsum or land plaster, a scrubbing brush and pail of water and brush the teeth of the horses. Some other fellow will walk a mile across the farm and back to the shop to procure a left-handed monkey wrench. The freshmen are instructed on all common farm practice; the parts of a harness and their use are explained; they take harness apart and put them together again, they have to be taught how to lead an animal, how to take them from the stall and how to properly tie horses, also the care of wagons, carts and carriages; in fact,

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

they have an opportunity to do most of the important farm operations that are performed by hand. The second year is a review of the first year's work with added responsibility and instruction, depending upon the pupil's ability. In his second year they begin to use the team and the horse implements, carting out the manure, using the spreader, plowing, preparing the land with roller, spring tooth harrow, disk and cutaway, learning to use the smoothing and acme barrow and cultivator. They help in the hay field, to rake and to load, to pitch on and off and to stow away the hay.

The Second Year

All of the second year men spend at least one month in the dairy, where they cool and care for the milk as it comes from the barn. They ship it to the city, then separate any remaining over for cream. Butter and cottage cheese are also made from this unshipped milk. Some of this class are allowed to select work in the poultry department, which is well equipped with modern incubators and brooders. We hatch over 2,000 chickens each year and their brooding and care, include scientific feeding and caponizing gives good training to the student of poultry culture.

Our horticultural department has its portion of students. The preparation of land for the vegetable gardening and the nursery is quite like that of general farming, but the care of the nursery, the propagation of the plants and trees makes an interesting diversion of instruction that is profitable and lays the foundation of an elementary knowledge of landscape gardening. The care of the lawns and ornamental flower beds and hedges and slopes contribute to this knowledge. The three greenhouses give opportunity to have some knowledge of the of the production of cut flowers for the market. Their propagation, care and packing are studied not only from an educational standpoint but to train the boy for the business end of practical horticulture.

Finishing Off

The third and last year is a review of the two previous years with still more responsibility being placed on the boy. This year they are allowed

to choose upon what specialty they will spend the majority of their energies. Some select the horticulture department and stay there the whole year, others select from the other departments, not all choose specialties. These later are changed from one department to another once a month, that they may acquire a better idea of farm management. During this third year we endeavor to have the boys learn to do those operations not already taught; for example, using the corn planter and grain drill, caring for gasoline engines, handling fodder and silage cutter and feed mills. They carry out what is called project work or studies on agricultural topics in which they are specially interested. For example, they will try to raise the yield of milk and butter fat of a cow by judicious feeding. They make accurate measurements of feed and resulting product, to ascertain how far an increased grain ration pays. Similar projects are conducted with swine and poultry, also on pieces of land, to see the effect of different fertilizers on crops and quality of produce. One of the most fruitful sources of individual work is found in our boy's vegetable and flower gardens which each one is required to plant and care for. During the first year they must raise potatoes, cabbage, peas, beans, beets, corn, onions, squash, turnips, tomatoes and celery. The idea is if they only stay one year, on leaving they would have some definite knowledge of planting and caring for a garden. These individual gardens are altogether so that the boys can compare their own results with two or three scores of others around them which is a great incentive to do good gardening. The second year calls for the planting of salsify, lettuce, parsnips, carrots, parsley, radishes, chard, lima beans, cauliflower, brussels-sprouts and egg plants. While raising these he watches others who are beginners, growing the vegetables of the first year. He therefore receives review and advance gardening. Besides these eleven vegetables they are required to raise, and upon the culture of which is awarded a first and second prize for each class, they have the liberty to select a few other varieties that may be of special interest to each pupil. The last year

men raise cucumbers, leek, caraway, okra, martyma, dill, spinach, whitloof, horseradish, peppers and melons, with the privilege of a flower garden. I have dwelt at length upon our instructions in practical agriculture and said less about the academic work and class room instructions, because that is the spirit of the school. If during the growing season, it is to the advantage of the crops to occasionally drop for a few days the class room work to attend to planting or harvest, it is done. Otherwise we would be a school instead of a farm school.

The Outcome

If any of you gentlemen have ever had the excruciating pleasure of having a young graduate of our agriculture colleges who had no other knowledge of farming than what he learned at the college, work for you, you will appreciate why we keep our boys at farming seven hours a day from the middle of May until the first of October and three hours per day from October to May. Even then it is little enough and only those who are most earnest, observing and interested can acquire the knowledge of farming required to begin for themselves. Years of earnest book study in any or all institutions cannot teach men to farm. The knowledge can be acquired only by actual practice. Do you make farmers? This is the pertinent question. We do. We have made some most excellent farmers, men who have their farms and are doing well. One drawback about having more of our boys in farming for themselves has been, that in most cases they are poor boys. It takes capital, quite a large amount for a young man to have in order to go to farming for himself, and our boys have not that capital. It takes more capital for a boy to start business in general farming than in most branches of horticultural work. The cost of a farm is quite as much or more than that of a small area with a good greenhouse and the other equipment of tools, wagons, machinery, horses, cows, swine and poultry require much more capital. \$2500 is required to equip and stock a farm and buy the feed and grain until the same may be raised by the young farmer. We have a number of our graduates who are doing excellent

work as assistant managers, or in charge of dairies, cow barns, poultry plants and the like for other people. We have some who go to good places and are unsatisfactory. A study of these cases discloses the fact that the trouble is in the boy himself. When doing his farm labor he was not thinking about his work, not trying to learn the reasons why things are done. When working he was thinking too much of when the bell will ring. Such a man can never be anything but an eye servant until he changes his whole mental attitude towards life itself. Unfortunately men having this attitude of life are inclined to grow more unhappy as they advance in age.

Some Hindrances

Another hindrance in the development of a boy is that he takes himself too seriously. His difficulties to him seem exceptional; he can hardly realize that others have had the same experiences and overcome them by virtue of will power, energy and efficiency, which are all factors that are within a boy. He thinks other boys have help from outside instead of from qualities within his own self. As a rule the boy who takes up an agricultural course in order to do more and better work will succeed, but the fellow who is studying to find a method of doing less work will be disappointed and unsatisfactory.

Another difficulty which schools experience in sending out their boys is their attitude towards others and towards their work. They often feel that they have been to school, are educated above their fellow workers, and if there is any work that is pleasanter and of a higher grade they think that their employer should give such work to them. The employer, however, always gives this special work to some tried, loyal employee whom he has had with him for a long time. Graduates fall into this error of taking themselves too seriously, feeling that their education lifts them above doing the general labor that is performed by the common laborer. They want at all times to have something which employs their special talents. In the work of a farm such conditions are not possible. When there is nothing but common labor to be performed, no school graduate should object; this gives deep dissatisfaction to both employee and employer.

It is most difficult to make labor popular with many young boys, to teach them to love labor for labor's sake, to have them realize that no honest labor is of itself degrading, and that it is the man who degrades labor instead of the labor degrading the man. There are many problems connected with agricultural schools and colleges that are yet in an experimental state of development. Too many people have a contempt of the past and are foolishly credulous of quick improvement, hopeful of discovering universal panaceas and confident of the success of every new and untried thing.

The largest element of chance or of error is the human equipment. The results of agricultural science have already afforded marvelous assistance to the farming interests of our country. When one realizes that it has taken five hundred million years to shape this earth and make it a fit habitation

for man, man himself must not be impatient if he is required to spend a few years of arduous toil and experiment that he may unlock the doors which so zealously guard Nature's secrets in order to more successfully employ the assistance of Nature in producing more abundantly from the earth food and raiment.

IN HOUSTON, TEXAS

SECRETARY JOHN YOUNG

In his newly acquired Palm Beach admiring a beautiful blooming Crepe Myrtle in the Convention Garden.

A TEXAS GREETING.

Editor HORTICULTURE:

Dear Sir:—Vice-President R. C. Kerr of the Society of American Florists and Ornamental Horticulturists has been doing yeoman service in getting up "pep" and interest in the coming convention at Houston, and while we are all very sure that Houston will prove an ideal host, I would like to remind all florists who contemplate attending the convention that Houston is in Texas and not Texas in Houston, and that the rest of us, located in different parts of the State, would also like to have a hand in entertaining you. It is only a matter of two hundred miles to San Antonio, with its missions, soldiers, chile and hot tamales; only a short distance to Austin, our state capitol, and although El Paso is not exactly in our near vicinity a trip to that thriving border town would be of extreme interest to everyone—incidentally it would be perfectly safe, although

POT GROWN STRAWBERRIES

Everbearing

30,000 PROGRESSIVE 10,000 SUPERB

200,000 Pot Plants

Now ready, of the very best varieties. Plants are guaranteed to be as fine as any grown. Write for varieties and prices.

ELIZABETH NURSERY COMPANY, .: ELIZABETH, N. J.

Mexico lies just on the other side of the Rio Grande. We believe that a general exodus to Texas will follow the convention, but we don't want you to concentrate in Houston. There is plenty of room for all, and the more of you who come the better we will like it.

The cotton fields are in full bloom, fruits of all kinds are here for the asking, the carloads of the biggest, finest most luscious watermelons that ever gladdened a darkey's heart are now moving—and mostly toward Houston. "Go thou and do likewise."

Sincerely yours,

F. W. HENSEL, JR.

Dept. of Horticulure.
College Station, Texas.

ROCHESTER FLOWER SHOW.

A Flower Show is to be held in connection with the annual exposition at Rochester, N. Y., September 4 to 9. It is to be along different lines from the one held last year, when some of the best growers in the country made exhibits, all of which were arranged in a beautiful garden effect. This year it has been decided to have a competitive exhibit and prizes are being offered. There are classes for amateurs as well as professionals, also a division in which both compete. Prize list may be obtained from Secretary Edgar F. Edwards, 309 Powers Building, Rochester, N. Y.

WASHINGTON, D. C.

Dr. B. T. Galloway, who for the past two years has been dean of the agricultural college at Cornell, is to return to Washington and will engage in special plant investigations including a study of plant diseases, in the bureau of plant industry, a bureau he was largely instrumental in developing.

J. J. Bickings, of Congress Heights, D. C., is in the Casualty Hospital recovering from a badly lacerated leg. While crossing the Anacostia bridge his wagon was struck by a car and he was thrown into the wheels of another vehicle, tearing his leg badly. About two weeks previous a woman chauffeur upset his wagon at 14th and I streets.

George Gouldman and Harry Kennelly motored last week to Atlantic City, N. J., where the former will spend his vacation, the latter going to Wildwood, a few miles distant. Frank C. Kiefer, with Gude Bros. Co., will spend a part of his vacation in Virginia and a part in Atlantic City, N. J. George C. Dalgleish has returned from a vacation with Mrs. Dalgleish at Colonial Beach.

SEED TRADE

AMERICAN SEED TRADE ASSOCIATION

Officers—President, Kirby B. White, Detroit Mich.; First Vice-President, F. W. Bolgiano, Washington, D. C.; Second Vice-President, L. L. Olds, Madison, Wis.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.

Holland Shipments Not Insured Against Loss by Delays.

The statement having been circulated by Dutch bulb drummers in this country that Holland insures against damage to plants and bulbs, caused by delays en route, Mr. W. Rolker, of New York, wrote to the principal Dutch insurance brokers in Rotterdam asking for information on this matter and in due time received the following reply under date of July 14, 1916:

"In prompt reply to yours of the 19th of June, received today, we are sorry to tell you that we must decline your request. The companies in this market do not feel much interested in insurances of this nature, so they prefer not to extend such to any foreign business. We regret that we cannot afford you an insurance on any conditions whatever."

We learn that Lloyds who did some underwriting for the Hollanders last season are so disgusted with the many claims put in that they will not write another similar policy this year. Such is in accordance with the views of our American insurance companies generally.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending July 21, were recorded as follows:

Bulbs—England, \$6; Hongkong, \$130. Plants—Italy, \$51; England, \$653; Guatemala, \$20; Panama, \$6; Colombia, \$1,172; Venezuela, \$832.

Red clover seed—Italy, \$95; Japan, \$4.

Other clover seed—France, \$6,793.

Grass seed—England, \$3,159.

Other seeds—Denmark, \$301; France, \$12; England, \$4,103; China, \$671; Morocco, \$715; Argentine, \$1,663; Hongkong, \$26; Italy, \$97; Netherlands, \$250.

Nitrate of potash—England, \$133.22.

Nitrate of soda—Chile, \$65.542.

Dried blood—Argentine, \$5,028.

Guano—Venezuela, \$4.

In Chicago.

Louis Bloom, one of the best known and best liked seed representatives on the road and who has had a great deal of practical experience in growing and marketing seed and produce, has taken over the eastern and southeastern territory for the Leonard Seed Co. of Chicago. This territory was formerly worked by Mr. Sutherland, who no longer represents the Leonard Seed Co. Mr. Bloom has been work-

ing other territory for the Leonard Seed Co. for many years and handling their larger jobbing trade.

The Leonard Seed Company have recently held a convention of traveling men, many of their men being called in and going over the trial grounds and fields of onion sets. It is the custom of the Leonard Seed Co. to take their men into their confidence and have them examine carefully all trials and growing crops so that they are well posted on conditions. In spite of the temperature being 100 in the shade, they tramped the onion set fields and proved themselves to be more able to stand hot weather than the militia on the border. It was probably the interesting crop conditions they were examining which prevented them from knowing how hot it really was. A. H. Smith, who was with them, states that it was one of the best meetings this company has ever held. Mr. Smith reports as a result of their inspection that they find the onion set acreage this year around Chicago very much reduced, and in addition to that, the crop was much damaged early in the season by wet weather and the maggots ate the sets quite badly, leaving spaces and skips in the rows, so that with the very best weather conditions from now until they are pulled, onion sets will be a very light crop and the prices should be correspondingly higher this season. The quality promises to be very good, as the last two or three weeks the weather has been dry and hot, which had a tendency to make good-keeping sets, and if there is not very much rain during the next ten days or two weeks, Chicago should harvest choice, small, good-keeping sets of the very finest quality, but the crop will be a small one.

Seed Legislation.

The provision for the free distribution of flower and vegetable seeds will probably be replaced in the Agricultural Appropriation Bill as suggested by the conferees and again a large sum of money will be used as "salve." The appropriation amounts to \$252,540. The item of \$3,000 to enable the Department of Agriculture to cooperate with horticultural organizations in the standardization of botanical names is in all probability lost for the conferees recommend that it be not adopted. A total of \$105,000 is provided for the enforcement of the insecticide act and \$28,700 for the discovery of seeds that are not up to standard under the "pure" seed regulations.

Notes.

The pea crop in Wisconsin is a very light one. Men now taking in peas at different growing stations throughout the state report the quality very good indeed. Peas are a better sample than they have been for two

years, but the yield has been cut short and there will be a short crop harvested.

We learn from our British exchanges that copious rains, and the prevalence of cold nights are keeping seed growers in an anxious frame of mind. Unless atmospheric change comes quickly some crops will be scarce, and not only the growers, but the buyers for big seed houses will have difficult problems to solve.

Beans in Michigan are being hurt now by the hot, dry weather, but up till this week the crop was growing well and the prospects good. If Michigan is fortunate in getting some good showers during the next few days, it will help the bean crop considerable, otherwise there will be much damage done, as beans are just beginning to bloom and the next week or ten days will tell the story in regard to the crop.

Lawn seed, No. 21957.—An American consular officer in France writes that a firm in his district desires to be placed in touch with American exporters of grass seed. Terms desired are: Seed subject to examination as to purity and thrift in a municipal laboratory before acceptance; payment to be made on receipt. Quotations should be in French currency and correspondence in French language.—*Bureau of Commerce Report.*

Reserved addresses may be obtained from the Bureau and its district offices. State opportunity number.

CATALOGUES RECEIVED.

C. S. Sheldon, Shady Shore Gardens, Oswego, N. Y.—American and Holland Grown Bulbs.

Royal Tottenham Nurseries, Dedemsvaat, Holland.—Wholesale Trade List of Hardy Perennials, Azaleas, Rhododendrons, Rock Plants, Aquatics, etc. A very complete and useful catalogue. McHutchison & Co., New York City, are the sole representatives for the United States and Canada.

BUSINESS TROUBLES.

Independence, Mo. — S. Bryson Ayres, voluntary petition in bankruptcy. Liabilities, \$4,300, assets, a very little personal property.

Newark, O.—The Miller Greenhouses, E. S. Brown, trustee, were sold at auction July 29th. The eight houses were all planted and the land and buildings were appraised at \$12,000.

NEW CORPORATIONS.

Portland, Me. — Jordan-Blanchard Nursery Co., capital stock, \$10,000. Incorporators, Alvin C. and Harold C. Jordan.

Plainfield, N. J.—American Bulb Co., to raise and deal in seeds, flowers and bulbs, capital stock, \$50,000. Incorporators, Wm. Newcorn, Pauline Botenstein and Elsie Davidson.

Knight & Struck Co. announce their removal to 258 Fifth avenue, New York City where they have acquired the entire fourth floor for stock and salesrooms.

BOUND FOR BAR HARBOR.

The party from Boston en route to the Sweet Pea Exhibition

BOSTON.

Frank J. Walsh and Mrs. Walsh of Melrose are at home from a pleasant vacation of two weeks at Bradford, N. H.

C. L. Margot advertises that his flower store in Jamaica Plain is closed for the summer and will re-open on Sept. 5. Wise man.

Residents of Malden are complaining of the killing of many of the city shade trees by the fumes from acid gases emitted by the chemical factories.

The Eastern Chemical Co., of Jamaica Plain, are rapidly recovering from their recent loss by fire and expect that in a week or two their building will be completely repaired. They report business good.

William Carr of the Flower Exchange and Miss Helen Scorgie, daughter of Superintendent Scorgie of Mt. Auburn Cemetery were married on August 2, and have gone away together for a good time.

Our readers will be saddened to learn that the veteran Jackson Dawson is in a very critical condition. His illness which has been developing

steadily for sometime past has now reached a very serious stage and his family and friends are apprehensive of the result.

A terrific wind, hail and rain storm swept through some of the suburbs north of Boston last Wednesday afternoon doing much damage to field crops as well as breaking the glass in the greenhouses of many growers who live in that section. Wm. Sim, of Cliftondale, reports a loss of about \$1,000 to the glass in his greenhouses being sucked out by the wind while his gladioli in the field were damaged to a considerable extent, being blown down by the wind.

David Welch has returned from his vacation in northern New York during which he reported at Plattsburg as an honorary member of the 9th Mass. His side partner, Ed. Welch, has now taken his turn, and is being refreshed in the sea waves at Old Orchard, Me. These gentlemen have one of the most convenient and practical wholesale flower outfits we know of in their new place at 180 Devonshire street. Office arrangement is ideal and the ice box is a model of efficiency and economy.

NEWS ITEMS FROM**PHILADELPHIA.**

The Philadelphia Wholesale Cut Flower Exchange (W. A. Leonard and J. M. Deutscher) have opened a new store at 1615 Ranstead street.

They are telling a little joke just now on the president of the American Rose Society. Recently he sent out four hundred personal letters asking co-operation in getting new members. He looked each letter over and signed it himself—very, very careful indeed until about the last fifty, when he had to hustle to catch a train. Next day he had the new experience of opening a letter addressed to himself and signed by himself! The infallible was caught napping for once.

We have had a pleasant visit from John Farquhar, of Boston, and his nursery manager, Mr. VanLeeuwen, the past few days. Messrs. Dreer, Michell,

LANCASTER COUNTY

Craig, Heacock and other leading sellers here have pleasant recollections; and outside of business, the handshakings and heart-to-heart talks have been numerous, enthusiastic and eloquent. It was a very pleasant ripple in our mid-summer dullness. President Pennock did not neglect the opportunity to get them on his side—for that "bee in his bonnet," about which we will tell you later.

GARDENERS' AND FLORISTS' CLUB

EVERYWHERE

CHICAGO.

Harry Conn, now in charge of the Harry Rowe Co.'s store has the sympathy of his friends in the loss of his wife.

The little son of Timothy Courtney, superintendent of the Foley Greenhouse Manufacturing Co., had the misfortune to fall and break his elbow on July 27th.

Mr. and Mrs. W. W. Adams of Rush St. and Bellevue Pl. are vacationing at Macatawa, Mich. Miss O. A. Tonner and Miss Nettie Parker are in northern Wisconsin.

C. A. Samuelson is taking his vacation on his apple orchard in Idaho from which place he writes friends that crops are looking fine and there is no lack of water for irrigating.

OFFICERS OF THE LANCASTER COUNTY FLORISTS' CLUB.

Reading Left to Right: Harry K. Rohrer, Treasurer; Elmer Weaver, Vice President; H. A. Schroyer, President; Frank Kohr, Secretary.

CLUB PICNIC.

Clara Burkhardt of the Poehlmann Bros. supply department returned from two weeks in Wisconsin, which favorite state for vacationists she reports as too hot and dry this year for real pleasure.

Sam Seligman's presence in Chicago and his recent severing of relations with the New York house he has so long represented, give color to the per-

sistent rumor of a new wholesale house in Chicago.

The University of Wisconsin is erecting a greenhouse for its Bureau of Plant Industry, Haven Metcalf, pathologist. The J. C. Moninger Co. has the work underway and a new all steel house, 28 x 70 feet, was completed August 1st.

Edw. Amerpohl says his home town, Janesville, Wis., which is a tobacco raising center, has had an unusual experience this summer. Since planting time one-half the place has had sufficient rain to be in splendid condition, while the other half has not had a drop of water all summer.

Cool looking windows of ferns and water lilies were very inviting in the down town district during the extreme weather of the past week. Passers-by would linger beside these windows and the unusual trade through July may be partly due to the extra effort to keep the windows looking cool and refreshing.

James P. Foley, secretary of the Foley Greenhouse Manufacturing Co., spent Sunday at the beach, where he found the water delightfully cool. The

next day he discovered the sun had been busy too, and for several days has not been able to visit the office. This firm is just completing four pieces of work, including the George Weiland range.

William J. Smyth, at 31st street and Michigan avenue, has just renewed his lease at an advanced rental, and the store is undergoing marked changes, which, when completed, will give the largest window space among Chicago's flower stores—75 feet on Michigan avenue and 40 feet on 31st street—with entrance at the corner. It will present an impressive sight to passersby on that famous thoroughfare. The windows will not be separated from the store proper, but will be a part of the salesroom and fitted so as to show plants and flowers to the best possible advantage. Mr. Smyth says that in spite of the torn up condition of the store he has found this season the best summer business in 25 years, and has not had time to leave the city for his vacation. Mrs. Smyth and daughter, Florence, who have been in California for six weeks, leave for home a few days hence.

Flower Market Reports

BOSTON Production is now at its lowest limit and benches are bare in the wholesale marts excepting for a moderate showing of gladioli and asters and a rather stagnant crop of longiflorum lilies. Roses are very few and quality is not worth mentioning. Asters are arriving slowly. Of these and gladioli it is expected that a few days later will see a surplus. Several very large mortuary occasions are making an insistent call just at present for which the white lancifolium lilies are well adapted and are finding a good sale as a result.

CHICAGO Trade is very good and both local and outside business is using up every bit of good stock that is coming into this market. The supply has been greatly curtailed by the protracted hot weather which covered all of July and at this writing there are far more inferior flowers than good ones. The first day of August found the wholesale houses thronged with buyers, anxious to get their share of whatever choice stock came in. Carnations nearly dropped out of the race last week. Sweet peas did the same some time ago. Roses are showing the effect of a high temperature by being soft and somewhat faded in color but, even so, they sell readily and are no worse than usual in midsummer. Of outdoor flowers the supply has been decidedly cut down. Asters run all the way from the few first-class ones to the many of very inferior grade. Some fine spikes of gladioli are offered and sell quickly.

NEW YORK The present condition in this market is not different from that of corresponding date heretofore. Growers have largely ceased to send in daily shipments—some contenting themselves with a weekly or semi-weekly plunge, and others shut down completely. The stock that does come to market has little to commend it. Roses are very flimsy, carnations are rags and gladioli are entirely too many. Sweet peas have disappeared. Cattleyas have also gone almost out of sight and prices of same have followed suit. If you want cattleyas now and must have them you'll have to talk big money.

PHILADELPHIA The hot weather has taken all the ambition out of both buyers and sellers here. The latter seemed willing enough to take what little came their way unasked, but as for getting up and hustling for it—nix. Still the situation is no worse than usual for this time of year and is just about what might be expected. Roses are not very plentiful and real good ones are very scarce indeed. Carnations are hardly worth mentioning. What few are coming in are very poor quality. Asters continue to improve a little, but the really fine sorts are not here yet. The best flowers on the market at present are the gladioli. They are very fine and more plentiful and about the only bright and cheering feature in a hot, muggy and gloomy situation.

PITTSBURGH Business continues unchanged with the demand more than balancing the supply. The greatest

ASTERS

In all colors, white particularly plentiful, splendid for funeral work,

The mid-season varieties are commencing to come in, much better quality than the early ones.

call is for asters, which are not nearly enough to supply the wants of the retail trade. Lilies are sufficient and good. On the other hand roses and carnations are very scarce, and inferior at that.

ST. LOUIS Dry weather and extreme heat has caused a shortage in outdoor stock, which is always in large demand in this market, but the buyers have been showing little activity of late. Roses and carnations are showing the effects of the heat wave for the past three weeks, as in fact all other stock has. Gladioli are in steady demand and are used in all kinds of work. Shasta daisies and lilies have sold well all week. Lily of the valley is scarce.

WASHINGTON There has been a scarcity of good roses and more white ones could have been used last week. Carnations are doing very well considering the time of year. The market is full of gladioli. The aster crop this year will be something of a failure on account of the continued wet weather, and dahlias also have been hard hit by the rotting of the roots. Lily of the valley is very poor and undesirable.

NEW YORK.

The New York delegation to the S. A. F. Convention at Houston are hopeful of securing the 1917 convention for their city. The last convention in New York was sixteen years ago. The late Edmund M. Wood, of Natick, Mass., was president that year.

Crates of Holland rose bushes, fifty bushes to a crate, were washed ashore by dozens at Long Beach, L. I., last week and everybody turned out to salvage this novel flotsam of the sea. It is said that the crates had been dumped from a ship that had been unable to land them, on account of quarantine restrictions.

The party from New York—convention bound—will start next Wednesday, August 9, on the S. S. Momus of the So. Pac. S. S. Line arriving at New Orleans, Monday, August 14. So, if you wish to join them, hurry up and notify J. R. Lewis, secretary of the N. Y. Florists' Club Transportation Committee, 448 West 37th street, New York City.

NEW YORK'S BIG EXPLOSION.

The news of the frightful blow-up on Black Tom Island in New York harbor has been widely disseminated by the newspapers and no general description is called for now. But our readers will be interested to learn of its effect on greenhouse glass and store fronts in New York and surrounding territory. Fortunately the damage in this respect, so far as we have been informed, was light, comparatively, although no doubt there are many sufferers whose loss has not been reported to us. In the uptown district the only damage of which we are apprised was the total destruction of the large front windows of Walter F. Sheridan and P. J. Smith on West 28th street and the loss of one side of A. H. Langjahr's window nearly opposite. Downtown the damage was much more severe. Cordlandt street was badly wrecked and this included the large plate glass show windows of Peter Henderson & Co. The only damage on Vesey street was to a fanlight in MacNiff's, but Barclay street was hard hit, Stumpp & Walter Co. losing their big plate glass windows and August Rolker & Sons having two panes in their office windows blown out clean. On Chambers street, Burnett Bros. lost their entire show window and A. T. Boddington escaped with the smashing of some skylights.

The heaviest damage was done in Jersey City. Peter Henderson & Co. had about 750 lights of glass broken in their greenhouses. Robert Leach on Garfield avenue, who is nearest to the scene of the explosion, suffered an estimated damage of from \$1,500 to \$2,000 in broken glass. William Keyser on Randolph avenue, suffered to the extent of about \$500. Patrick O'Mara, who resides in Jersey City, had nearly all the windows in his house shattered and the front door wrenched from its hinges and broken. W. G. Elliott, Monticello avenue, had his flower store windows blown out. All are grateful that none were cut by flying glass. All in all, the contingent damage was very light, considering the tremendous force of the explosion, the fact that the windows were sucked out rather than blown in, being largely accountable for the trifling injury to window contents, etc.

We learn in a general way that many flower store windows other than those we have mentioned, in Jersey City, Hoboken, Brooklyn and other outlying communities were broken, but details are lacking.

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage
as regards prices and quality to place your
order with us.

Soliciting your order through this ad
cuts down the overhead selling expenses
and you positively get lower prices and
better quality. Our terms are liberal and
are a guarantee that you get a square
deal, all bulbs guaranteed true to name or
money refunded.

Write us and upon request we will mail
you our booklet giving prices f. o. b. New
York or Chicago, and we also cheerfully
furnish you with any information that
may be desired. Those of our friends who
will mail us a list of their requirements
will find it has paid them to do so.

Awaiting to hear from you at your pleas-
ure, we remain,
Yours very truly,

Westerbeek & Klyn,
Sassenheim, Holland.

Prizes totaling \$800 were distributed to exhibitors at the 10th annual flower show at Southampton, N. J., last week. The huge marquee erected on the school grounds was beautifully decorated and the flowers and vegetables most tastefully arranged, making the show one of the most successful ever held. One-half the net proceeds will go for the benefit of the Southampton Hospital. The exhibitions of dinner tables were many and so attractive as to make judging difficult. Mrs. Rufus L. Patterson won 1st prize, Mrs. Horace Russell 2nd and Mrs. Edward Van Ingen 3rd. Attractive tables were shown by Mmes. Caleb Wild Hammill, Peter B. Wyckoff and Thomas B. Clarke. Mrs. Russell also carried off many other prizes, among them two silver cups for the best showing of fifteen vegetables. In a class by themselves were exhibits by Mrs. Henry H. Rogers. They occupied the place of honor at the entrance. One was an artistic display of tuberous begonias with six large baskets of the flowers suspended from a frame work. This exhibit was marked by the judges, "Gold medal, cultural certificate, certificate of merit for artistic arrangement." The other table holds a special display of achimeneses, some potted and others in eight baskets similar in design to the begonias.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "Care HORTICULTURE" should be sent to 145 Summer St., Boston.

CLUBS AND SOCIETIES

FLORISTS' CLUB OF PHILADELPHIA.

The August meeting of this club, held on August 1st, was better attended than might have been expected. In former years the great hurrah and excitement used to be the convention but since "Frisco" and "Hewston" snatched us on that August has been a funeral. The scheduled feature was a moving picture show entitled "New Ideas in Piping and Heating"—the speaker being Cornelius T. Roland, of the National Tube Co., New York City—and this came off in due course; showing the audience every feature of pipe making from the mine to the factory and finished product. Real interesting. Especially those red-hot blazing furnaces. Some of the lads who looked on may mend their ways now. They were shown what they are coming to if they don't behave. But it was all right and Mr. Roland received a hearty vote of thanks. We would suggest to next year's committee that heating is not a good subject for August. Refrigeration has a more attractive sound—about then. An unexpected attraction at the meeting was the presence of John Farquhar of Boston who, on request, gave us an account of the wonderful new things that have come to us in recent years from northern China through the Arnold Arboretum. Some fourteen hundred new and wonderful things. We have not yet begun to realize their value and beauty. But if we had only three things to show for Wilson's fifteen years of travel and countless perils and tribulations, those three—the great Buddleia, the great hardy lily, and the only hardy cedar of Lebanon—would have been ample compensation and assured him fame, fortune and the immortal plaudits of prosperity. Very few plants of this wonderful hardy cedar of Lebanon have so far escaped from captivity. One of these is in possession of our fellow citizen, Mr. Morris, of Chestnut Hill. How this hardy cedar managed to survive on the higher reaches of the Himalayas is a mystery but there are lots of mysteries as well as miracles in this world since Moses struck the rock and Joshua halted the sun and moon. The September meeting will be Drear's will be the spotlight hero—he Dreers will be the spotlight hero—he and a fine exhibit of new and fancy varieties.

AMERICAN CARNATION SOCIETY.

Anton Then, Chicago, registers the new carnation Thenanthos. Parentage Enchantress X Red Seedling. Color brilliant red. Size 3½ inches. Prolific bloomer and entirely free from disease, being never troubled with rust. Raised by John A. Then.

NEW YORK, N. Y.**AMERICAN ASSOCIATION OF
PARK SUPERINTENDENTS.**

The Eighteenth Annual Convention of the American Association of Park Superintendents will be held in the city of New Orleans, October 10-11-12, 1916.

Inasmuch as this is the first convention of the organization to be held in the South, it is confidently expected that there will be a larger and more representative attendance than ever before, bringing together park executives from all sections of the United States and Canada.

Eminent men of the profession will participate in a program of lectures, papers and discussions; the local park authorities are preparing a social program which will demonstrate the famous Southern hospitality; there will be an opportunity to inspect the remarkable development along recreational lines which has taken place in the progressive cities of the South and most important of all, will be the man to man discussion of methods and ideas, which is only possible on an occasion of this kind, where there are present men who have had to deal with every problem which ever presents itself to a park executive.

A trip to the New Orleans convention will be educational as well as recreational and every park executive should embrace the opportunity to spend his vacation in this way. Remember the dates, October 10-11-12, and plan your vacation accordingly. A detailed program will be published later. Special parties will be arranged from different sections.

CLUB AND SOCIETY NOTES.

The Sayville (N. Y.) Garden Club will hold a fall flower show in the opera house, Sayville, on September 1 and 2.

The newly organized Sewickley (Pa.) Horticultural Society has elected officers as follows: President, G. Wessenaar; vice-president, R. Boxel, treasurer, William Thompson, Jr.; secretary M. Curran; executive committee, Alexander Davidson, J. Carman, William Thompson, Sr., J. Barnett and Charles Patton. The president appointed the following committee on by-laws: William Thompson, Jr., Charles Patton and J. Barnett.

Notwithstanding the various natural handicaps that have, throughout the season, been delt out to garden lovers and flower growers, the first show of the season held at Stockbridge, Mass., Saturday afternoon, July 29, came through with a very considerable amount of credit. Regardless of the fact that the season of sweet peas was considerably past its height, the class for this popular flower was well filled, and all things considered, made a very commendable showing. The hardy

DREER'S "Riverton Special" Plant Tub

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$1.60	\$17.50	\$145.00

60	10 in.	.40	4.40	35.00
70	8 in.	.30	3.50	28.00

Manufactured for us exclusively. The best tub ever introduced. The neatest, lightest and cheapest. Painted green, with electric welded hoops. The four largest sizes have drop handles.

HENRY A. DREER, Seeds, Plants, Bulbs, and Supplies, 714 Chestnut Street, Philadelphia, Pa.

perennials were the most flourishing and sturdy part of the exhibition, the annuals showing in a more or less general way the effects of the very recent heavy rains. Decorative arrangements by the ladies of the summer estates, suitable for the guest chamber, the hall, the dining table, brought out the highest artistic taste of the competitors.

Obituary**Michael Donohue.**

Michael Donohue, who had been employed as gardener at Roger Williams Park, Providence, R. I., for over 25 years, died Saturday, July 15th, aged 61 years. He was born in Ireland and came to Providence 32 years ago.

Richard H. Dunbar.

Richard H. Dunbar, florist and dealer in antique furniture for many years, died on July 28, at his home in Bristol, R. I., following an illness from kidney trouble. Mr. Dunbar was 58 years old and a native of Bristol.

George Roney

George Roney, senior member of the firm of Roney Bros, florists, West Grove, Pa., met with a fatal accident on July 22nd. It seems that they were moving a boiler and the wire slipped and Mr. Roney was caught between the boiler and the steps and instantly killed.

John Supper.

John Supper, 70 years old, a prominent florist, Lakewood, N. J., committed suicide by firing two shots into his side last Saturday night. He left a note that he wished no flowers at his funeral and wanted to be buried in the back yard. Friends are at a loss for the man's act. Mr. Supper is survived by a widow and two sons.

John W. Lyon

Friends in Chicago are pained to learn of the death of John W. Lyon, of Lyon & Anderson, of Belvidere, Ill., at the Freeport, Ill. hospital, July 28th. The funeral was held at Belvidere on Sunday, July 30th.

John W. Lyon was a man highly esteemed and had held places of trust

and honor in civic life, being at one time mayor of Belvidere.

Mrs. T. Kalish.

Edward and John Kalish of The Kalish Bros. Floral Co., St. Louis, Mo., are extended the sympathy of the trade in the loss of their mother, Mrs. T. Kalish, who died July 24th, after an illness of ten days. Mrs. Kalish was one of the company since her husband died, and acted as treasurer. The funeral took place on Thursday, July 27. Many beautiful floral pieces were sent by the trade, of whom many attended the funeral services.

William Thomas Logan.

William Thomas Logan, seedsman, died at his home, Brighton street, Rochester, N. Y., on July 19th, aged 67 years. He was first employed by James Vick's Sons, later with Mandeville, King & Co., and finally became manager of the retail seed department of Crosman Bros. Co. Less than two years ago he purchased the seed business of this concern. It is understood the business will be discontinued. He is survived by one brother and two sisters.

PITTSBURGH.

The marriage of De Forrest W. Ludwig and Miss Irene Collins of Meyers will be an event for October.

William M. Turner, of Wilkinsburg, and party are on a six weeks' motor trip through the east. George McCallum has returned from Atlantic City.

Augustura Frishkorn, manager of Beckett's Seed Store, and son have returned from a lake trip. H. Grabert of the same firm is camping in Michigan.

Mr. and Mrs. Walter Miller and their son are visiting in Cleveland. Miss Mathilda H. Schmidt, a saleswoman for the E. C. Ludwig Floral Co., is at Atlantic City.

FREAKY FACTS AND FACTLESS FREAKS.

Greensburg, Pa., July 25. The crop of potato bugs is heavier in Westmoreland county than for many years. John Calvin, a farmer of Hempfield township, has devised a novel scheme that is quite successful in ridding his patch of the pests.

He has rigged a small gasoline engine and vacuum cleaner on a little wagon, which he hauls up and down the rows, drawing the potato bugs in as he goes. He says it is the greatest success by way of ridding a field of the pests he has ever attempted.

Formerly the method employed was to poison the bugs or pick them off by hand.—*Boston Traveler*.

Plymouth, July 27.—Pink lettuce, potato-bugless potatoes and fruits flavored to taste are some of the experiments and accomplishments of Bernard Field, the "Wizard of Plymouth Rock," as this civil engineer, biologist, discoverer and student has come to be known.

Bernard Field, the discoverer of a minute form of life which he has termed dextrogerm ("the right germ"), has used "his bugs," as he calls them, to give to lettuce the coloring and characteristics of the rose, and grow potatoes which the time-honored potato bugs refuse to live upon.—*Boston Post*.

NOV-KINK WOVEN HOSE

In any length (one piece) with couplings, 14c. per foot. Unequaled at the price. Remnants, shorter than 50 feet, 10c. per foot, with couplings.

HOSE VALVE—70c.

All brass except the hand wheel. Has a removable leather disk which is easily replaced to keep water tight. Stuffing box prevents leaks at stem.

Houses To Visit On Your Boston Vacation Visitation Visit

ON Decoration Day, I was talking with a leading New York State florist about his vacation, when he dove into his inside pocket and pulled out an advertisement, containing a partial list of our houses in and around Boston. Handing it to me, he said, "I am going to Boston on my vacation and shall visit some of those houses. If the fellow who wrote that Ad. had put in the directions how to get to the houses, and also what each grower grows, it would have been a big help to me."

Then I promptly offered to do that very thing for him.

And now it occurs to us that you may also be going to Boston and would like just such a list. So here it is.

Here's hoping you will have a jolly good time, and come away with a bundle of helpful ideas.

Of course, you'll call on Mr. Elder, our Eastern Manager. Lord & Burnham Co.'s office is in the Tremont Building, and you will be warmly welcomed.

Waban Rose Conservatories, Natick, Mass. Grow roses. Have 1 house 24' x 300' 2 houses 21' x 700' and one 40' x 947' 6". Take B. & A. train from South Station. 18 miles. 42 minute run.

A. A. Pembroke, North Beverly, Mass. Grows carnations. One house 60' x 525'. Take B. & M. train from North Station. 21

miles. 44 minute run. Or take train to Beverly and trolley to North Beverly.

John Barr, South Natick, Mass. Grows carnations. Has Semi-iron Frame house 35' x 311'. Take B. & A. train from South Station to Natick. At Natick, take trolley car to South Natick. 18 miles. 42 minute run.

Thomas Roland, Revere, Mass. Grows sweet peas, tomatoes and roses. Has one house 50' x 600', one 61' x 525', one house 76' x 650'. Take Cliftondale-Saugus subway car at Scollay Square. Car passes greenhouses. 35 minute run.

William Sim. Cliftondale, Mass. Grows sweet peas, violets, tomatoes. Three Semi-iron Ridge and Furrow houses 20' x 201', one 43' x 400', one 20' x 100' one 30' x 243'. Take Cliftondale-

Saugus subway car from Scollay Square. 51 minutes. Or take B. & M. train from North Station, 9 miles, 28 minute run.

Houses To Visit On Your New York Vacation Visitation Visit

When you pack your duds and come to Little Old New York, along with the rest of the vacationers—why don't you just take this list of houses and check off the houses you want to visit? Every one of them is worth while seeing. Several of them are our new wide spaced construction, the latest in greenhouses. With something like two thousand trunks at your command, going in and out of New York each day, you can cover a lot of territory in a short time.

Before you start out, why not call around at our office, and let us suggest ways and means. The gladdest kind of a glad hand we come awaits you.

BURGEVIN BROS., Kingston, N. Y. Plants, Carnations and Roses.

2 houses each 14 ft. wide by 225 ft. long.

1 house 11 ft. wide by 233 ft. 4 in. long.

Iron Frame Workroom 34 ft. wide by 120 ft. long.

The two larger house were built with 12 ft. 6 in. spacing, with curved arch for supporting the roof. No chimneys.

Take the West Shore R. R. to Kingston. The houses are about 15 minutes walk from the Station, or you can take a trolley from the Station to within a block of the greenhouses.

A. S. BURNS, Jr., Spring Valley, N. Y. Roses, Carnations and Lilies.

These two greenhouses each 50 ft. wide by 400 ft. long, of standard Iron Frame Construction, 12 ft. 6 in. spacing.

Take W. 23rd Street to Jersey City and take the Erie R. R. or the N. J. & N. Y. R. R. to Spring Valley, N. Y. The houses are about 5 minutes walk from the railroad station.

GEO. PETERS & SONS, Hempstead, L. I. Carnations and Chrysanthemums.

Just completed 1 house 62 ft. wide by 200 ft. long. 2 houses, each 17 ft. wide by 150 ft. long. These are of Iron Frame Boiler and Furrow type, and are 8 ft. 4 in. spacing.

Take the L. I. R. R. from the Penn. R. R. Station, N. Y., and go to Hempstead. The greenhouses are about 10 minutes walk from the station.

M. MATHERON, Baldwin, L. I. Carnations and Chrysanthemums.

One greenhouse 100 ft. wide by 250 ft. long. This house will be completed about Sept. 1st. This is of our standard Iron Frame Construction, 12 ft. 6 in. spacing.

We also built a house for Mr. Matheron two years ago, 40 ft. wide by 200 ft. long. This is of Iron Frame Construction, 8 ft. 4 in. spacing.

Take the L. I. R. R. from the Penn. R. R. Station, getting off at Baldwin. The greenhouses are about 5 minutes walk from Baldwin.

TRAENDLY & SCHENCK, Rowayton, Conn.

Roses, Carnations and Chrysanthemums.

Just completed two (2) Iron Frame Shadowless Ridge type of greenhouses, each 62 ft. wide by 50 ft. long, with an Iron Frame Boiler House 40 ft. wide by 50 ft. long. These are the new type of rose house, with 12 ft. 6 in. spacing, the long span to the South.

Take N. Y., N. H. & H. R. R. (Grand Central Station). The greenhouses are 5 minutes walk from Rowayton Station.

BEDFORD FLOWER CO., Bedford, N. Y.

Standard Iron Frame Greenhouse 41 ft. wide by 562 ft. long, with 12 ft. 6 in. spacing.

The best way to reach this place is to take the Harlem Division of the N. Y. C. & H. R. R. (Grand Central Station), and get off at Bedford Station. The greenhouses are about 10 minutes walk from the Station.

JOHN WALLENBORN, Smithville, South, L. I.

Iron Frame House recently completed, 40 ft. wide by 200 ft. long, 8 ft. 4 in. spacing. Also a house 50 ft. wide by 150 ft. long, also with 8 ft. 4 in. spacing.

Take L. I. R. R. from Penn. Station to Bellmore Station, and from there take a train to Smithville South, about 3 miles.

CHAS. FISH, Blue Point, L. I.

Carnations.

One (1) Iron Frame Greenhouse 40 ft. wide by 200 ft. long, with 8 ft. 4 in. spacing. Built last year. Mr. Fish erected this house himself.

Take L. I. R. R. (Penn. Station) to Blue Point. Greenhouses right at Station.

J. F. ABRAMS, Blue Point, L. I.

Carnations.

One (1) Iron Frame Greenhouse 45 ft. wide by 400 ft. long, with 8 ft. 4 in. spacing. This house was completed about 2 years ago.

Take L. I. R. R. (Penn. Station) to Blue Point.

HENRY HESSON ESTATE, Flatbush, Brooklyn, N. Y.

Carnations.

One (1) Iron Frame Greenhouse 31 ft. 4 in. wide by 191 ft. 9 in. long, with 8 ft. 4 in. spacing.

Take Brighton Beach Elevated R. R. from Brooklyn Bridge, N. Y. C. to Church Ave., and then the Church Ave. Trolley to Troy Avenue. Greenhouses within sight of trolley.

DAILEDOUZE BROS., Flatbush, Brooklyn, N. Y.

Carnations.

Two (2) Iron Frame Greenhouses, each 57 ft. 5 in. wide by 200 ft. long, with 8 ft. 4 in. spacing.

Directions same as for Henry Hesson estate.

A. L. MILLER, Rockaway Road, Jamaica, L. I.

General Plants for Easter and Christmas

Has 40 to 50 greenhouses, covering about 100,000 square feet.

Take L. I. R. R. from Pennsylvania Station, New York City, to Jamaica.

BRANT BROS., Utica, N. Y.

Carnations and Roses.

New house 51 ft. wide by 475 ft. long, with 8 ft. 4 in. spacing, of Iron Frame Construction. One erected last year, 40 ft. wide by 400 ft. long, with 8 ft. 4 in. spacing, of Iron Frame Construction. Also an Iron Frame Boiler House 40 ft. wide by 25 ft. long.

Trolley goes within block.

Early Flowering LONG SEASON Spencer Sweet Peas *for Winter Flowering Under Glass*

Since the introduction of Yarrowa Spencer Sweet Peas, great effort has been made on the part of California and Australian growers to produce Early-flowering Spencer Sweet Peas. We offer a list of varieties by one of the most prominent Californian and one of the most prominent Australian growers. One of their chief characteristics is their long season, period of blooming, frequently remaining in bloom for four months. Every one of the crosses were made from the old Early-flowering or Christmas Grandiflora types on the late or Standard Spencers as parents. We feel that there will be little demand for the common or Grandiflora Winter-flowering Type and have, therefore, decided to discontinue offering the same.

Californian Varieties Ready for Delivery August—September

EARLY MORNING STAR

The color is a deep orange scarlet or flame color in standard, with rich, orange-pink wings. The flower is practically the same color as the Late-flowering Spencer Thomas Stevenson. It does not burn out in the open and under glass will be magnificent. The flowers are large and of best Spencer form, and borne in threes and fours in wonderful profusion. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SNOWFLAKE

This is one of the best Early-flowering White-seeded White Spencers. The blossoms are very large and of the best waved Spencer form. The flowers are borne in wonderful profusion on long stems. The form is every bit as good as White Spencer. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SPRING MAID

Those who are familiar with the Late-flowering Spencer Mrs. Hugh Dickson, will have a good idea of what a handsome variety this is. The color is a light pink on a cream ground, and the blossoms have the same splendid characteristics of Mrs. Hugh Dickson for a florist's flower. It is a most effective flower and, like our other Early-flowering Spencers, it carries a great wealth of blossoms borne in fours on long stems. There is no Early Spencer Cream Pink which is as attractive as Early Spring Maid. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY MELODY

This is a deeper shade of pink than Early Song Bird on white ground, closely resembling Countess Spencer and near Hercules. It might be described as rose pink on white ground. The effect, when bunched, is most pleasing. It is very floriferous. The flowers are borne on long stems and mostly four large, well waved blossoms to each stem. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY SONG BIRD

The flower is the same color as Florence Morse Spencer and Lady Evelyn Eyre, and a bit lighter than Elfrida Pearson. It has the same excellent form and features of Mrs. Hugh Dickson, but is on a white ground. The placement of the flowers is splendid for packing and the flowers are borne on long stems in threes and fours. When in full growth it seemed as though every stem carries four large blossoms. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY HEATHER BELL

This will be one of the most popular shades with all florists, as it will be useful for making up for any occasion. It is a little like the variety known as Anita Wehrman, but vastly superior in every way. The flowers are very large, borne in fours and threes on long, stout stems, and are of beautiful, bold Spencer form. The color is a rich but pleasing mauve, but after standing in water the color becomes a beautiful mauve lavender. Pkt., 25 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

Australian Varieties Ready for Delivery NOW

CONCORD STRAIN

Pkt., 18 seeds each of any of the following varieties, 35c.; 5 pkts., \$1.50

CONCORD PINK. A beautiful, new variety of a most attractive shade of delicate pink. The flowers are large and of true Spencer form. The stems, which are long and strong, usually carry 3 large flowers.

CONCORD CRIMSON. A variety of great merit on account of its glowing color. It is a rich crimson; the flowers, of true Spencer form, are borne on strong, stiff stems.

CONCORD LAVENDER. Without a doubt this is the finest of all Lavender Winter-flowering Sweet Peas. The color is a beautiful shade of rich, rosy lavender. The flowers are of true Spencer form.

CONCORD WHITE. A splendid, pure white variety of wonderful vigor and

substance. The flowers are pure white and of ideal Spencer form, borne three and four to the stem.

CONCORD SALMON. A rich shade of salmon pink and very free flowering. The flowers are borne three and four to a stem and are of true Spencer form.

CONCORD BLUE. This magnificent variety is of a beautiful sky-blue color, sometimes varying darker, the variation, however, being slight. Quite the finest sky-blue we know of.

CONCORD PURPLE. A leader in its color. When first opening, a delightful shade of mauve purple, changing, as the flower ages, to purple blue. The flowers are of ideal Spencer form and quite large.

YARROWA

The finest Rose Pink Winter Flowering Spencer; the ideal florist variety. Pkt., 15c.; ¼ oz., 35c.; ½ oz., 60c.; oz., \$1.00; ¼ lb., \$3.25; lb., \$12.00.

New Early Flowering Giant Pansies Or Winter Blooming

An entirely new and distinct strain of Pansies. The main advantage of these new Pansies over all hitherto existing Pansies is the extreme earliness of flowering and its unusual hardiness, which enables them to withstand quite severe Winters, and to bloom right on into the Summer. Sown at the same time as other Pansies, they begin flowering the early part of March or as soon as the snow is off the ground, many times having four or five large flowers to a plant, when all other Pansies are only showing buds. The flowers are large, well formed and fragrant. They are highly recommended for Autumn planting on graves, and for very early bedding, as well as for early cut flowers.

14. **WINTER SUN.** Golden yellow with dark eye.
15. **ICE KING.** Silvery white with dark blue eye.
16. **CELESTIAL QUEEN.** Light or sky blue.
17. **CHARM OF MARCH.** Dark velvety blue.
18. **MIXED.** The above four colors with other shades and variations.

EACH COLOR SEPARATE OR MIXED.

500 seeds 50c., 1000 seeds \$1.00, 1/8 oz. \$2.00, 1/4 oz. \$3.75, 1 oz. \$15.00.

For list and price of other Kenilworth Pansy Seed see my ad of July 29.

FREE OFFER RAINBOW is a mixture of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every \$1.00 worth of Pansy seed I will send, free, 1000 seeds of Rainbow and with other amounts in like proportion.

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—Pope.

Care of Poinsettias

Loss of foliage on poinsettias is due to several causes, such as too low a temperature, excessive feeding and too much or too little moisture at the roots. Be sure to give good drainage. If once they get water-logged, the foliage will soon turn yellow. Plunging the pots in ashes is the best way to put an even amount of moisture at the roots. If kept quite close to the glass, well ventilated and watered carefully, they will not grow too tall, nor will they lose their foliage. Grow in full sun, as the least bit of shade makes them draw up. Give good syringing every day which will help to keep them clean. Spread them out from time to time so they will not become crowded. Short stock for baskets, etc., can be propagated up to the middle of September.

Primulas

Pick off any flowers which appear and do not allow the plants to become pot-bound. There is more danger of this occurring with the robust growing *P. malacoides* and *P. Kewensis* than with the more moderate *sinensis*, *stellata* and *obconica*. Usually 5-inch and 6-inch pots are suitable for *obconica* and *sinensis*. Give them a compost of fibrous soil three parts, old cow manure two parts and the same of leaf mold with a little sand. Watering must be done once, twice or perhaps thrice a day, unless the pots are plunged. The sashes should be removed after four o'clock in the afternoon—in fact, they are not needed at all, except during heavy rains, so long as lath shading are used and frost keeps away. The night dews greatly benefit the plants and during hot days they should be sprayed over several times. See that they do not become crowded; give them plenty of room.

Mignonette for Midwinter

A compost such as is used for carnations or chrysanthemums will grow excellent mignonette. They can be grown on either solid beds or raised benches. If on the latter be sure they are not near the heating pipes below, for mignonette loves a cool, moist bottom. If the soil has been in the benches for some time and has been scratched over two or three times to kill out weed seedlings, so much the better. It is important to have a first-class strain of seed, such as is offered by a number of the leading seedsmen. Sow the seed, several together, in little batches fourteen or fifteen inches apart each way. It is easy to thin out the bad ones later. Mignonette must have a cool house. 40 degrees at night should be the winter minimum, and it wants all possible light and plenty of water at the roots. The finest mignonette

spikes are always produced in the coldest months, and February sees this plant at its best.

Paper White Narcissi

These are not much in demand while chrysanthemums are in season, but sell well later. But if the flowers are all for home consumption it will be well to have a few flats started each week, allowing large batches, of course, for such occasions as Thanksgiving and Christmas. Paper White bulbs are now coming to hand and though they have often been in oversupply in the wholesale flower markets, they are inexpensive, easy of culture, can be flowered over a long period, and are, all in all, among the most useful late fall and winter flowers for the average country florist. Paper Whites do not require to be kept in the dark or covered with ashes, as the bulk of bulbs do. They start to root and grow quickly and can, if necessary, be had in flower before November 1. They can be placed in a frame and left out until the end of September, when they can be brought in and forced into flower in a temperature of 55 to 60 degrees.

Preparing Soil

The present is a good time to look to the turning over and preparing of the soil to be used for benches, etc. The compost should have been got together some time ago, but should be turned over and well broken up now, so as to be in readiness when wanted. It is necessary that it be finely chopped so that the ingredients are evenly mixed. If barnyard manure was put in at the time it was stacked up nothing else will be necessary. Bone meal or tankage—the latter a mixture of blood, bone and the waste from slaughter houses, which is dried and then finely ground up—we have found very good for this purpose. Either of these, added to the compost at the rate of about fifty pounds to the yard of soil will make a good strong soil and also has the advantage of causing the compost to heat sufficiently.

Reminders

Stir the surface of carnation benches frequently.

Feed all early chrysanthemums liberally until they show color.

Cuttings of *Pandanus Veitchii* and *P. Sanderi* will root readily in a couple of weeks.

In pruning pelargoniums head back to within a few eyes of the old wood, but no farther.

When transplanting mignonette from small pots see that they are well soaked before planting.

Next week—Cattleyas; Freesias; Lorraine Begonias; Nephrolepis; Plants for Christmas; Reminders.

mented not long ago on the recent change in policy of the American Association of Nurserymen whereby it now becomes a trade institution wholly to the exclusion, practically, of altruistic or educational purpose. This ideal was carried out in the Convention, which from the standard of a trade organ appears to have been a very successful affair and, as *The National Nurseryman* states, "It is very doubtful if a nursery employee is eligible to membership in the National Association under the present policy; at least there is no effort to encourage him to become one." We might here assure the young man wishing to profit by membership in an association working on helpful lines that the Society of American Florists and Ornamental Horticulturists is such an organization and there are no trade or class barriers to active membership or official preferment therein. Mere membership in any organization, however, cannot make intelligent skilled workmen nor can any association or institution of horticultural learning take the place of practical training in the field and the potting shed, but if "more loyal, earnest, real plant growers" are to be provided, the societies can do much to help and encourage the ambitious young man, bringing him into personal contact with the men who have made a success of their business, and under influences which tend to develop intelligence, self-respect and emulation to excel.

A master spirit gone

The news of the death of Jackson T. Dawson occasions profound sorrow. Jackson Dawson was a rare genius. He left to mankind a priceless legacy. Forests that had their birth under his vigilant care will flourish and the gardens, not only of this country but of the whole world, will for ages bear his imperishable impress. The Arnold Arboretum could never have become what it is without Dawson. He grew up with it and it grew up with him. Close, very close was this man to Nature's heart for he was a child of Nature and she to him was a goddess. Whether trudging through the wilderness in never-wearing quest, sowing with unerring intuition the strange seeds that came to him from the ends of the earth, or deftly performing delicate operations in plant propagation, Nature's secrets were for him always an open book and he understood.

It was natural that a man of such potent mentality should irresistibly draw his fellow men about him. His picturesque physique and rugged personality made him conspicuous wherever he went. He has been aptly called "the Walt Whitman of horticulture." But, in the qualities that made him a man among men and made his life a benediction, above all was his overflowing kindness of heart. This character was beautifully exemplified in his affectionate pride in his children. No words were too strong to express his faith in them, no personal sacrifice too great for him to make in their behalf. To others he gave unstintingly from the well-spring of a heart overflowing with generous impulse and he was ever ready to impart freely of the knowledge he had stored up during his busy life.

Is it any wonder that Jackson Dawson was loved and venerated, that men wept and turned away shaking with grief as they looked for the last time upon the features of one who was to them "the porcelain clay of human kind?" "Guide, philosopher and friend" he was to many of us. We shall miss him so much, and the world will be so lamentably poorer without him, but there is comfort in the thought of having lived in his time, of having known him intimately and enjoyed his companionship and loved him as but few men ever love another.

Opportunity knocks

An editorial note in *The National Nurseryman* calls attention to the great need for more skilled help in the nursery business in this country and intimates that the matter might have been properly brought before the Convention at Atlantic City, which it was not. We com-

JACKSON DAWSON — IN MEMORIAM

To an audience of gardeners it is not necessary to say that Jackson Dawson was a great gardener for that is known to all men who cultivate plants, but the friendship between us which has lasted for more than forty years and brought us into almost daily association makes it possible for me to say something of Dawson as a man. In all these years he and I have been engaged in forming the museum of trees which is known as the Arnold Arboretum. This has been his life work as it has been mine, and to this work Dawson brought industry, enthusiasm, imagination and high skill. The number of plants which he raised for the Arboretum and for its correspondents and friends is surprising. His plants are now widely scattered in many countries, and in many countries they will long keep green the memory of Jackson Dawson—kind friend, untiring in his devotion to duty, fortunate in the reputation which his skill and success brought him, happy in the labor which he loved and in the development of the great garden which he saw, through his labors, gradually grow in usefulness and beauty, and rich in friends who loved him.

C. S. Sargent

Death the Reaper is ever busy. He spareth neither our nearest nor dearest, friends nor foes. Each hour, each second he busies himself making sorrow in families and gaps in living friendships. Each and all as they journey through life are made familiar with the Reaper's scythe and in due season all fall before it. Some early, some in their prime, others late; some at the threshold of their life-work, some at its hey-day, others, and these are the fortunate few, not before the fruition of their labors is apparent to all the world. In this latter category of the select and worthy few belongs our loved friend Jackson T. Dawson who fell asleep on the afternoon of Thursday, August 3rd. Rich in friends, held in honor by all who knew him, fortified with the knowledge of a useful and well spent life he passed into the beyond in the closing days of his seventy-fifth year. Quietly he was beckoned and without pain and with a smile of content the summons was answered. From the early days, when he laid aside for a while the tools of his peaceful art to grasp those necessary to defend hearth and home and to help safeguard his adopted country and subsequently unto the end Jackson Dawson ever answered with promptitude the call of duty. With never a thought of self, but with all his energy and genius concentrated upon the work on hand he lived his life and wrought much for the good of the world and for the advancement of the art and science of Horticulture.

On the afternoon of Sunday, April 8th, 1899, more than seventeen years ago, my first knock at the door of his home was answered by his hearty "come right in." The phrase was new to me but it carried a welcome to my heart's ease. I was then a bird of passage, but the few days I spent in the Arnold Arboretum in Jackson Dawson's company were more than ordinarily profitable to me. He, in that generous way of his, showed me all over the establishment and I was astonished and bewildered at what I saw, more especially at the size of the

shrubs and trees raised from seeds, cuttings or grafts by the skilled craftsman who was my guide. So much so in fact that when we came to the Hemlock grove I asked in all innocence "Did you plant those trees too?" Those eyes of his flashed and I could feel their piercing power as he replied "No, God Almighty planted them!" After an interim of seven years the fates brought us together again and have not only allowed me to grow in knowledge and appreciation of our friend, but have also forged a strong bond of fellowship and communion. Others have known him a lifetime and all hold him in affection and esteem, the depth of which it is not possible to adequately express. He has passed from our ken, but in the legacy he has left behind all may share and in the Arnold Arboretum, which he has helped so much to build, there remain lasting monuments to his skill, his energy and his patient perseverance. And not alone in the Arnold Arboretum will the results of his work abide, but in the gardens of his many friends rich and poor, in the city parks of this country from east to west, in Europe and in Australasia there are growing today many, many trees and shrubs from seeds sent or from plants raised by him. I mention trees and shrubs but his affection in the matter of plants embraced every kind—moss and fern, tiny rock plant and strong herb, minute alpine from the limits of the Arctic flora, tropical wonder, desert curiosity, the latest novelty, the old time favorites from New Holland and the Cape of Good Hope. He loved them all and what joy there was in hearing him talk on these his loves!

Few men had as many real friends as Jackson Dawson and none deserved them more than he; full to the overflowing with the milk of human kindness his heart was larger than his frame. Many, very many will miss him but the memory of his enthusiasm, his genius and his example will remain as a lode star on the sea of life. He was a man in the world of men and whatsoever his hand found to do he did it with all his might. Happy and blessed are those of whom this can be said and proud must be the family who call such a man as Jackson T. Dawson father. To the fullness of my capacity their grief I share and with them his memory I shall cherish and revere unto the last.

F. W. Wilson

The horticultural world has again to mourn the loss of one of the greatest workers for its uplift, for during the past half century there was no man either on this or other Continents that had a better knowledge of trees, shrubs and other hardy plants than did the deceased. His botanical knowledge and of the history of these plants was remarkable, and while as a propagator he so often labored under the most adverse conditions, there was never a man that could compare with him, and a great many of the plants in the Arnold Arboretum will stand as monuments of his skill and tender care, as he resurrected their last spark of life when received from their foreign habitats either in the shape of seeds, plants, grafts or cuttings. A great many of these plants would have been left in oblivion had they been received and cared for by ordinary hands. Jackson Dawson was personally genial, unassuming, hard working, and always willing to impart to his fellow-

men his knowledge of the art of plant cultivation and propagation, and to inspire them with some of his great love for these things.

Those who personally were fortunate enough to know this grand man their sorrow will be very deep and, as for myself, having known and associated with him for over thirty-four years, at his demise I fail to find words to express my sorrow.

So. Orange,
N. J.

W. M. Mandy

It is with the greatest sorrow that I hear of the passing away of Jackson Dawson on the 3d of August. His death will be a great loss to the Arnold Arboretum and to Horticulture in general and I doubt if his unique position can ever be filled by anyone else. I shall personally miss him greatly as it was always a great pleasure for me to talk to him. His knowledge of plants and their requirements was very great and his expertness in the propagation of trees, shrubs, etc., was most extraordinary. The most difficult plants to multiply had no secrets from him. It is most unfortunate that he leaves no written record of his work. When it is realized that the great majority of the trees and shrubs in the Arnold Arboretum have been propagated by him the extent of his work can be understood. He has at any rate left a magnificent monument to his memory in the great number of fine trees in the Arnold Arboretum today that he has cared for from the day the seed germinated. It can be truly said that "His memory will be kept green."

John W. Mandy

New York.

I was very sorry indeed to learn that our good friend, Jackson Dawson, had passed away. His place in horticulture will be very difficult to fill. I might say almost impossible, at least in this generation. His like is not born every day, and, in his passing, a figure has vanished which occupied a large space in the horticulture of the United States—I might say in the world. His lovable, kindly spirit will be missed very much by those who had the pleasure and privilege of knowing him and meeting him now and then.

Patrick O'Mara

New York.

Dear Mr. Stewart:—

Since Wilson wrote that appreciation on Jackson Dawson last January, I have been several times minded to write and thank you for scattering roses along the evening walk of one we all loved so dearly, and lo! I have just received a message that he passed away. I count the friendship of Jackson Dawson among the richest treasures I have owned. Always so true, affectionate, loyal and magnanimous he was indeed a friend in the true sense. For over twenty years I grew up close to his family and feel I know him intimately and it is a knowledge that increases his measure. For your timeliness and goodness in publishing that tribute I wish to cordially thank you in brightening the way of our mutual friend.

Portland,
Oregon.

E. N. Mische

Pyrethrum uliginosum

The Giant Daisy, *Pyrethrum uliginosum*, is a native of eastern Europe. In standard works and catalogues we find it differently described and listed. Sometimes it is classed among the chrysanthemums; again there are authors who insist on the name *Leucanthemum uliginosum* as being the correct one. Practical horticulturists well acquainted with hardy herbaceous plants agree on its merit as a very effective midsummer flowering perennial for the border. Reaching a height of about 4 feet, an abundance of large white flowers on erect slender stalks stand out boldly and when grouped in clumps of the size indicated by our illustration can be easily made a conspicuous feature of floral garden arrangements. As fitting associates I mention Japanese anemones and hardy asters of the novae-angliae type, preferring pink and lavender shades. In cases where a more dashing color effect is desired I would not hesitate using tritomas of the Pfitzerii, sulphurea or uvaria grandiflora varieties in combination.

I am told that the giant daisy frequently does not come up to expectations. The reason for this is that we do not know the full cultural requirements. A moderately moist location is the ideal one. *Pyrethrum uliginosum* must have a free sunny exposure, rich soil and plenty of water. Plantations stunted in growth during early droughts will not produce good flowers.

I wish to call attention to the comparatively new variety *Pyrethrum uliginosum stellatum*, originating in the nurseries of Henry A. Dreer. The flowers of *stellatum* are of decidedly larger size than those of its parent. It is also distinguishable by its long narrow petals adding grace and a certain refinement to the form of the flowers.

To prevent exhaustion of the soil a mulching of old barnyard manure over winter as protection is especially recommendable for giant daisy plantations. Plants may be raised from seed sown in cold frames during April and May. Propagation by root division, however, is the quickest way to increase stock.

Glenside, Pa.

Richard Rothe

Obituary

Jackson Thornton Dawson.

Jackson Dawson, superintendent of the Arnold Arboretum, Jamaica Plain, Boston, Mass., died at his home on Centre street, on Thursday afternoon, August 3. He was in his 75th year. It is fully two years since Mr. Dawson's intimate friends noticed that his rugged health had begun to weaken, but it was only last April that the seriousness of his condition became apparent. From that time on his health failed rapidly and it finally became apparent that it was a question of but a short time until the career of the eminent gardener must come to its close. He continued to attend to his duties, however, so far as his strength permitted, almost till the last. He was unconscious for several hours before his death and the end came peacefully.

Mr. Dawson was born in East Riding, Yorkshire, Eng., October 5, 1841. He came with his mother to the United States as a child, and when he was 8 years of age he was started in gardening in the nurseries of his uncle at Andover. At the outbreak of the Civil war he enlisted and served for three years in Co. G, 19th Massachusetts Infantry. He was several times wounded and it is said that some of his wounds were received while in quest of plant specimens and seeds, a pastime in which he had been passionately interested from childhood.

After his discharge in 1864 he went to work in the nurseries of Hovey & Co., at Cambridge, where the patient, devoted young student found ample opportunity for the indulgence of his enthusiasm and indomitable energy in the realm of botanical classification, geographical distribution, propagation and cultivation of plants. His introduction to the public came through his recognition of the Scotch heather which had been growing wild in Massachusetts and his making the fact known to the world.

In 1871 Mr. Dawson was offered a position under Francis Parkman of the school of horticulture of the Bussey Institution. Then, after two years, Professor Charles S. Sargent took the place of Mr. Parkman, and a little later became director of the Botanical Gardens of Cambridge. Mr. Dawson supplied him with plants for the gardens, and thus became familiar with plants from all parts of the world.

The Arnold Arboretum was started shortly afterward and Mr. Dawson became identified under Professor Sargent with this undertaking and did his part in the development of the institution up to its present proud position among the great tree gardens of the world. Here he accomplished many difficult and seemingly impossible feats in grafting, seed germination and complicated culture, and by studious hybridization produced many new and valuable plants, among which the Farquhar, W. C. Egan, Dawson, Lady Duncan and Sargent roses are perhaps the most widely known. His practical knowledge of hardy trees and shrubs was second to none. World-wide recognition as one of the most accomplished gardeners of his time was given by the award to him

in 1911 of the George Robert White gold medal of honor for achievement in horticulture.

On Dec. 1, 1866 Mr. Dawson married Mary McKenna. Eight children were born to the union, six of whom survive him. They are William Francis, George Walter, James Frederick, Henry Sargent, Miss Laura Blanchard Dawson and Mrs. Harold Blossom.

For many years Mr. Dawson has been an active member of the Massachusetts Horticultural Society and a frequent exhibitor of hardy material. He was a past president of the Gardeners' and Florists' Club of Boston and a member of the Horticultural Club of Boston. Also was for a number of years a member of the Society of American Florists, serving on its executive committee in 1895-6-7.

The funeral at St. Johns' Church on Saturday, was largely attended by horticultural people from Greater Boston and others from distant points. Among those from other states we noticed W. A. Manda, South Orange, N. J.; W. O. Roy, Montreal, Canada, W. W. Harper, Chestnut Hill, Pa.; Mrs. Timothy McCarthy, Providence, R. I.; Leonard Barron, Garden City, N. Y.; C. W. Hoitt, Nashua, N. H.; A. E. Thatcher, Bar Harbor, Me.; Rudolph L. Roehrs, Rutherford, N. J.; and there would have been many more had it not been for the unavoidably short notice. The honorary pall bearers were Charles S. Sargent, Ernest H. Wilson, Charles W. Hoitt, B. T. Watson, J. K. M. L. Farquhar and W. W. Harper. A large number of beautiful floral tributes were sent by loving friends in the profession, the florist trade and other walks of life. Burial was at Andover, Mass.

The Arnold Arboretum was closed during the time of the funeral.

John Charlton.

John Charlton, aged 80, one of the best known florists and nurserymen in western New York died on Wednesday morning, August 2, following an illness of six months at his home, 629 Culver road, Rochester, N. Y. In 1869 the late Mr. Charlton introduced *Ampelopsis Veitchii* into the United States. In 1873 he propagated the Peter Henderson tree carnation the introduction of which variety marked an epoch in the history of the carnation. He also introduced the Pocklington grape and the Golden Prolific gooseberry. He helped to introduce the James Vick strawberry. Deceased also was among the first to grow hardy grapevines for market and was well known as an expert grower of fuchsias. The firm of John Charlton & Sons is prominently known for the growing of roses, flowering shrubs and peonies.

The late Mr. Charlton was born November 19, 1835, in Horningsham, Wiltshire, England, and received his education there in the village school. He always had been fond of plants and flowers and his love for them guided him to the profession of gardener and afterward that of nurseryman. When 17 years old he was apprenticed at the gardens of Longleat, the county seat of the Marquis of Bath, which was then as now one of the show places of England. Young Charlton was chosen for this position out of twenty-four applicants. The first year of his apprenticeship Mr. Charlton

spent among the fruit trees and wall fruits. The second year he was in the flower garden and during the third year in the forcing house where he learned how to grow fruits under glass. At the termination of his three years he left Longleat and went to the island of Guernsey where he took charge of the garden of Peter De Jersey. In the fall of 1856 he came to the United States, landing in New York a few days after reaching the age of 21. The first winter he spent in Toronto, Can., but in the following spring he came to Rochester where he has lived ever since.

In Rochester Mr. Charlton first was engaged by the late George J. Whitney director of the N. Y. Central R. R. remaining with him until the fall of the following year when he went with Joseph Hall, horseman, miller and agricultural implement maker, remaining in the latter position until Mr. Hall's death six years afterward when he resolved in 1865 to venture into business for himself. He secured two acres of land and constructed a greenhouse, afterward replacing it with some that were larger. From time to time he added to his land until he had about 150 acres under cultivation. When his sons, John A and Joseph M. Charlton became old enough he associated with them under the firm name of John Charlton & Sons. Deceased leaves his wife, Sarah Charlton, his two sons, two daughters, Mrs. W. B. Kerr and Miss Margaret Charlton, and three grandchildren. Funeral services were held Friday afternoon, August 4, and interment was in Rochester, N. Y.

Mrs. George C. Shaffer.

It was with a great deal of regret that the many friends of Mrs. George C. Shaffer, wife of George C. Shaffer, Washington, D. C., learned that she had passed away early on Sunday morning following a prolonged illness. Although it was known that her illness was of a very serious nature, nevertheless her death was a shock to all who knew her. Mrs. Shaffer was of a most lovable type of woman. It was her pleasure to make conditions enjoyable for her friends. At the head of the ladies' auxiliary of the Florists' Club of Washington, D. C., and as an active member among the ladies of the S. A. F., she won many friends. She was the life of many of the enjoyable affairs in which the ladies participated, especially the outings of the Florists' Club where she entered into many of the games and was usually picked as a winner. She was an adept in the sports in which women enter and on the bowling alleys she showed great skill.

Mr. Shaffer has the full sympathy of every member of the trade, not only of Washington but of the surrounding territory, and HORTICULTURE and its correspondent wish to offer to him their most profound sympathy.

Richard Brett.

Richard Brett, a well-known gardener of the old school, died on Sunday, July 23, at Morris Plains, N. J., and was buried at Morristown. Among the positions which Mr. Brett had filled was that of gardener to James R. Pitcher; then foreman to Pitcher & Manda; afterwards he had charge of Mr. Colgate's place in Yonkers, N. Y.;

then Mr. Jenkins' at Llewellyn Park, West Orange, N. J., and later Mr. Peters' place at Islip, Long Island. Mr. Brett's son has just taken a position as assistant at Greystone, Yonkers, N. Y.

Eugene S. Hinckley.

Eugene S. Hinckley, chairman of the Park Commission of Haverhill, Mass., died on August 6, in his seventieth year. He was a native of Gardiner, Me.

MOLD IN MUSHROOM HOUSE.

Editor HORTICULTURE I am coming for assistance for a mold on my mushroom that spreads through the beds. I think probably it comes from the spawn. I have changed from one firm to another, thinking it would help. My mushroom houses are built of concrete throughout, roofing and all, and are about three feet below the ground, eight feet high inside. But my shelving is made of wood so it can be removed when emptying houses. I am going to disinfect walls and all shelving with coal tar preparation. Do you think this will kill this mold? If not, could you give any information on same?

I wrote to the government about this mold and they said that some firms are putting spawn on the market that is affected with mold. Could you give an address of some reliable firm that has good spawn?

E. C. P.

Kentucky.

A thorough cleansing of the mushroom house every season is absolutely necessary in successful mushroom culture. In summer, when it does not pay to raise mushrooms indoors, is the time to clear everything out and lime-white the walls and scrape and clean every surface; opening up the house to a free circulation of air. Left thus open for a couple of months the house will be well sweetened and there will be no trouble with fungus. Get mushroom spawn from a first-class seed house—those who advertise in HORTICULTURE are all reliable.

GEORGE C. WATSON.

GO DOWN AMONG THE FLOWERS.

Will you not go down among them? Among those sweet living things whose new courage sprung from the earth with the deep color of heaven upon it, is starting up in strength of goodly spire; and whose purity washed from the dust is opening, bud by bud, into the flower of promise; and still they turn to you and for you, "The Larkspur listens—I hear, I hear!—And the Lily whispers—I wait." —John Ruskin (Sesame and Lilies) 1819.

The devil is mortally afraid of roses and larkspurs and lilies given to us for joy and the healthy love of the out-of-doors. Go down among the flowers, my children. McTAVISH.

ALONG ABOUT NOW.

Put by the work you are at for awhile,
Take a day off.
Go where the fields in their loveliness smile,
Take a day off.
Stray where earth's beauty is lavishly strewn,
Drink in the light of the sun—and the moon—
Put all the chords of your being in tune,
Take a day off.
Brain that is weary and heart that is worn,
Take a day off.
You who the burdens have patiently borne,
Take a day off.
Go to the seashore, the mountain, the lake,
All of the tasks that surround you forsake,
Or sometimes a "breakdown" may force you to take
A lot of days off.

—Boston Traveler.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

THE GARDEN CLUB OF ALLEGHENY COUNTY.

A great Flower Show will be held in Pittsburgh in June of 1917, under the auspices of The Garden Club of Allegheny County. The proposed date is June 13th to 16th.

One of the largest and most centrally located halls in Pittsburgh will be engaged wherein to make the display. The plan and scope of the exhibition will be of the most comprehensive character. The choicest products of the many fine gardens in Pittsburgh and vicinity will be displayed in competition to an extent never before attempted in that city.

An opportunity will also be afforded to florists, nurserymen, seedsmen and other allied trades to participate therein. A preliminary schedule offering \$5,000.00 in prizes is now being drafted. This will be sent out to gardeners, growers and everyone interested as soon as possible so that they may have ample time to grow and prepare their exhibits.

Arthur Herrington of Madison, New Jersey, who has so successfully managed and arranged recent large exhibitions in New York, Newport and other places, has been engaged as manager.

HORTICULTURAL SOCIETY OF NEW YORK.

This society will hold an exhibition on Saturday and Sunday, August 19 and 20, in the museum building, New York Botanical Garden, Bronx Park, New York City. It will be mainly a gladiolus show, but premiums are also offered for Montbretias and also collections of annual flowers. The exhibition committee is also authorized to award prizes for exhibits not included in the regular published schedule of premiums. Such exhibits will be welcome. Schedules are now ready for distribution and will be sent on application to the secretary, George V. Nash, New York Botanical Garden, Bronx Park, New York City.

GEORGE V. NASH, Sec'y.

AMERICAN ROSE SOCIETY.

The following new roses have been registered with the American Rose Society:

By Frank L. Moore, Chatham, N. J., Muriel Moore. The flower is white; when in bud it is a bluish white. The bud is longer than that of My Maryland and not quite so double. The foliage is distinctly different, the leaflets having a rich green color; are narrower and have edges more finely serrated; in fact, the edges are almost smooth. It is a profuse bloomer.

By Howard & Smith, Los Angeles, Cal., Los Angeles. Color flame pink shaded to yellow, toned with salmon. Foliage light green, extra heavy. Buds long and pointed opening to a bloom of large proportion. A cross between Madame Second Weber and Lyon Rose. Growth exceedingly vigorous; has none of the die-back habits of Lyon Rose.

The Hartford Rose Test Garden Committee has made the following report:

The committee appointed to judge the new rose entries visited the Hartford Test Garden on July 5th. The varieties of this season's entry were not considered in condition to judge until better established.

Among those entered previous to this season, the following climbing roses were examined and received awards:

Dazzling Red—79 points. Entered by W. A. Manda.

Mrs. Longwood—78 points. Entered by Conard & Jones.

It was a source of gratification to the judges to note the splendid behavior of the varieties previously awarded silver medals, every one of which stood out conspicuously among the older entries.

WALLACE R. PIERSON,
ALEX. CUMMING, JR.,
JOHN F. HUSS,
BENJ. HAMMOND, Sec'y.

HOLYOKE AND NORTHAMPTON GARDENERS' AND FLORISTS' CLUB.

The regular meeting was held Aug. 1st at the establishment of R. S. Cary, South Hadley. H. E. Downer read an essay received from the National Association of Gardeners entitled "Horticulture as a Profession from the Standpoint of a Gardener," written by J. Johnson, New York. A most interesting discussion ensued.

G. W. Thorniley, florist at the State Hospital, read "Reminiscences of Bedding Plants," from which we gathered that some of the stock offered today falls short of the standard of quality obtainable in years past. This naturally started something and the discussion ranged all the way from the customer's pocketbook to the problem of obtaining experienced help. Mr. Thorniley also entertained us with his experiences on a recent trip to Florida. H. E. D.

WISCONSIN STATE HORTICULTURAL SOCIETY.

The annual summer meeting of this enterprising society will be held in Lake Geneva, Wis., on August 22 and 23. The meetings will be held in Horticultural Hall, a fine building belonging to the Gardeners' Association and well adapted to the purpose.

PROGRAM.

Tuesday, August 22nd, 10 A. M.

"Common Insect Pests of Garden and Orchard," J. G. Sanders, State Entomologist.
"Fungous Diseases of Garden Plants," R. A. Vaughn, Asst. Prof. Plant Pathology, College of Agriculture.

"The Fruit Bud," R. H. Roberts, Instructor in Horticulture, College of Agriculture.
Afternoon Session, 2 P. M.

"Perennials," Axel Johnson, Lake Geneva.
"Planting Rural Home Grounds," A. Martini, Lake Geneva.

"Roses for City and Country," W. J. Moyle, Union Grove.

Two papers or informal talks by delegates of the Milwaukee Florists' Club. Names and titles to be announced later.

"The Lake Geneva Trial Orchard," the Secretary.

"Strawberries, One Thousand Dollars an Acre," by the man who did it.

The Secretary is F. Cranefield, Madison. He tersely says:

"All papers or talks will be short, not over fifteen minutes each, ten minutes preferred, to be followed by questions and discussion. No special program has been prepared for the evening. If time is lacking to finish the afternoon program before supper time we will begin after supper where we left off; if there is nothing else to do we will go fishing.

The plan followed in past years of urging and begging members to attend will be abandoned mainly for the reason that it seems to be unnecessary. Further, it's a waste of energy. The regular program and the entertainment features are here outlined and if you go the assurance is given you will feel well repaid; if you fail to go it's your loss, no one else will lose. Now, it's clearly up to you.

Wednesday will be devoted to entertainment furnished by the Lake Geneva Gardeners' Association and "Lake Shore" residents.

Leave Lake Geneva by boat at eight-thirty A. M., stopping at several places enroute to Fontana where a light luncheon will be served at one P. M. After lunch, returning to Lake Geneva at four P. M., then by auto around the Lake stopping at Yerkes Observatory.

GLADIOLUS EXHIBITION IN BOSTON.

The gladiolus exhibition at Horticultural Hall this week will be of more than the usual interest for with it will be held the seventh annual exhibition of the American Gladiolus Society. The display of this popular flower is expected to be the most comprehensive ever brought together in this country. Most of the largest growers, both professional and amateur from Massachusetts to California will be represented, and the latest improved varieties will be shown. The exhibition, which is free, will open Friday, August 11, at noon, continuing through Saturday from 10 to 6 and Sunday from 1 to 6 o'clock. In addition to the gladiolus, collections of other seasonable flowering plants will be exhibited, as also early summer fruits and vegetables.

WILLIAM P. RICH, Sec'y.

POT GROWN STRAWBERRIES

Everbearing

30,000 PROGRESSIVE 10,000 SUPERB

200,000 Pot Plants

Now ready, of the very best varieties. Plants are guaranteed to be as fine as any grown. Write for varieties and prices.

ELIZABETH NURSERY COMPANY, .: ELIZABETH, N. J.

THE FAMOUS SAN JACINTO BATTLEFIELD.

A visit to which is a part of the program of the S. A. F. Convention at Houston, Texas.

GLADIOLUS SOCIETY OF OHIO.

The fourth annual flower show of the Gladiolus Society of Ohio will be held in the Hollenden Hotel, Cleveland, Ohio, on Friday and Saturday, August 18 and 19, 1916. Premium lists can be had on application to Wilbur A. Christy, secretary, Warren, Ohio. All who expect to exhibit should notify chairman of the executive committee, R. E. Huntington, Painesville, Ohio, giving the number of vases and amount of space desired.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Department of Plant Registration.

Public notice is hereby given that as no objection has been filed, the following registration becomes complete. *Salvia splendens* var. *Elizabeth Dunbar*, by John Dunbar, Rochester, N. Y.
JOHN YOUNG, Sec'y.

August 5, 1916.

HOUSTON CONVENTION RATES

In addition to the rates already

quoted the Southwestern Passenger Association announces under date of August 7 that interested lines have individually authorized an open rate of fare and one-third for the round trip from New Orleans, La., and Shreveport, La., to Houston, Texas, and return, tickets to be on sale August 12, 13 and 14, 1916, limited for return to reach original starting point prior to midnight of September 5, 1916.

MICHAEL BARKER,
Chairman Transportation Committee,
Chicago Florists' Club.

FLORISTS' CLUB OF PHILADELPHIA.

The September meeting of the Philadelphia Florists' Club will be "Canna Night," and Eugene Michel of Dreer's will be the spotlight hero—he and a fine exhibit of new and fancy varieties.

The Violet Growers Mutual Association, Rhinebeck, N. Y., reelected the following officers at its annual meeting: President, Chas. R. Traver; secretary-treasurer, F. L. Asher. Fred Moore succeeds A. C. Toof as a director.

ANNOUNCEMENT

Commencing December, 1916, I shall disseminate

Crimson Carnation Doris

Awarded A. C. S certificate at St. Louis, January, 1916, **scoring 88 points after being in the boxes on the trip 48 hours.** This will give some idea of its keeping and shipping qualities. Habit erect, producing an abundance of high-grade flowers on long stiff stems, fine color, calyx very seldom splits.

Price, \$10 per 100, \$100 per 1000

S. J. GODDARD,

**Framingham Centre,
Mass.**

COLOR STANDARDIZATION.

Color appeals to every human being and belongs of right to all who love joy-giving knowledge. Color discrimination has its value in every walk of life and in all art and science. Let us classify and name colors on simple, intelligible lines, before the professional experts get hold of the subject and try to lock it up as supposed occult knowledge, and quarrel among themselves over names; for color is new as a science, though old as an art. Every science must be international for its development, and a natural science, especially, can only do its best work through links between naturalists of diverse nations. It is good news that Dr. Ridgway has agreed to promote a color chart adapted to wider use. I believe any color chart that was not based on the Ridgway method would be retrograde. Yet the Frenchmen of the *Repertoire des Couleurs* are eminently right (1) in recognizing the importance of international work; (2) in giving the origin of the names adopted; (3) in their fine feeling for color names, the English names being often very inferior, while the Latin nations have usually wisely imitated French names; (4) in quoting examples of colors (though too exclusively, for general use, from the vegetable world); and (5) in laying down the rule that a color is best tested or exhibited by being surrounded with white, though it must be admitted that for the convenience of a small book of reference, where color samples are crowded, the grey ground of Ridgway's may be justified as more restful to the eye. Color nomenclature should be fixed after comparisons between the work of French, Italian, Spanish and German color students, and the names they select, as well as of American and English; and, if possible, we should consult a few of the many cultured people of Japan (who all learn English, in spite of our irrational spelling). I believe Dr. Ridgway to be a true

American in fine intellectual sympathies and appreciation of the needs and capacities of ordinary mortals; and we should ask him to add some helpful pages to his admirable letterpress. Some alternative names should be given in a prefatory classified index, even if synonyms are ruled objectionable in the body of the book. Brief notes on the origin of names are needed, and also such historical appellations as "Chevreul's type blue," and if possible all the forty of Saccardo's Latin names. There is no more delightful hobby than a collection of colors, which can be made with not only paints or pastels, but also with scraps of colored paper from wrappers on merchandise, disused sample books, and small pieces of cotton or silk-colored cloth, cut into uniform shape. The best model is the Ridgway chart, three columns of seven colors each to a page (omitting black and white); and a skeleton outline of the rectangular spaces can be easily pencilled in by means of a cardboard stencil. Opposite each of the fifty-three pages space should be left for entering notes of examples. Thus this individual color chart will have the Scarlet Pimpernel (*Anagallis arvensis*) and the two tones of the Dandelion duly noted; also the Purple Clover (*Trifolium pratense*), the best example of Ridgway's Eupatorium Purple, XXXVIII., 67", V-R; in the French Repertory "Deep carmine violet," 174, tone 1. The color primuline yellow will be referred to the yellow of the wasp. To go further afield for examples, the Mariposa Lily (*Calachortus macrocarpus*), the loveliest of British Columbian flowers, is Hay's lilac, XXXVIII., 63", R. V., tone d— perhaps better given in the French chart: "Violet heliotrope," 188, tone 2. The inside of the Maynard Plum is Pomegranate purple, Ridgway, XII., 71, V. R. R., i; or in the French chart, 165, purple garnet, tone 1, or reddish-purple, 161, tone 1 (Saccardo's *purpureus*). The production of a universal and easily understood color guide would do many things for us, especially when we should become familiar with it through a little color-testing practice. Not the least of the benefits resulting would be the help in visualising from description the floral treasures found by such travellers as Mr. E. H. Wilson and Mr. Reginald Farrer.—D. F. Kerr, in *The Gardeners' Chronicle*, London.

BAILEY'S NEW STANDARD Cyclopedia of Horticulture

Six large quarto volumes.
More than 3,600 pages. 24
exquisite full-page color
plates. 96 full-page sepi
halftones and more than
4,000 text engravings. 500
collaborators. Approxi-
mately 4,000 genera, 15,000
species and 40,000 plant
names.

The new Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is not merely an ordinary revision or corrected edition of the old Cyclopedia, but it is a new work from start to finish with enlarged boundaries geographically and practically; it supersedes and displaces all previous editions or reprints of every kind whatsoever. It is both an Encyclopedia and a Manual, for with the aid of its Synopsis and Key, amateur and professional alike may quickly identify any plant, shrub or fruit contained within the set, and then receive expert instructions for its cultivation. Price \$6.00 per volume. Four volumes have now been issued and the others will follow in succession. Order from

The Glory Fern (*Adiantum Farleyense Gloriosa*)

Adiantum Farleyense Gloriosa

THE GLORY FERN or RUHM VON MORDRECHT

This splendid Fern which so closely resembles *Adiantum Farleyense* in appearance and which does not require the special skill and care in growing that is necessary to produce good plants of *A. Farleyense*, has quickly made a place for itself not only on account of the fact that it can be produced for little over half that of growing *Farleyense*, but also because either in a cut state or as plants used in decorative work, it will outlast the old variety ten to one, making it an available subject where *Farleyense* can not be used at all. Since its introduction some 5 or 6 years ago there has never been a supply large enough to meet the demand. With this in mind we have prepared this season an extra large stock, which is in prime condition and we now offer select

3 inch pots, \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000
4 inch pots, \$3.50 per doz.; \$25.00 per 100

For a Complete list of seasonable stock see our current Wholesale List.

The above offer is intended for the trade only.

HENRY A. DREER

714-716 Chestnut Street, PHILADELPHIA, PA.

THE PAWPAW (*Asimina triloba*).

A colony of this handsome tree, which is very common in the southern states but at the north occurs in only a few isolated stations, is now established here, and this year the leafless branches have been well covered with the curious, dark-brown, bad-smelling flowers. Under favorable conditions the Pawpaw is sometimes a tree forty feet high with a tall stout trunk; it has handsome drooping, dark green leaves often a foot long and six inches wide, but it is chiefly interesting as the only extra-tropical North American tree, with the exception of some of the wild Plums, which produces edible fruit. This is borne in few-fruited clusters and is from three to five inches long and from an inch to an inch and a half in diameter, greenish yellow, becoming almost black when fully ripe with semitranslucent, sweet, luscious flesh. The ripe fruit does not bear transportation and is rarely sold in the markets, and so is little known except to boys who live near Pawpaw thickets. The American Genetic Association, however, has now taken up the possibility of the improvement of this fruit and is offering prizes for information about the largest trees, and about trees, regardless of their size, which bear fruit of unusually good quality.

—*Arnold Arboretum Bulletin*.

The firm of Thomas Meehan & Sons has been dissolved. The business at Germantown and Mt. Airy, Pa., will be continued by S. Mendelson Meehan and J. Franklin Meehan as Thos. Meehan & Sons. The establishment at Dresher, Pa., will be Thos. B. Meehan and his son as Thos. B. Meehan Co.

LILIUM CANADENSE.

This is one of the loveliest of native American flowers. Just now its tall stems crowned with golden flowers swing jauntily above the surrounding herbage in the moist, rich meadows, while its sister lily, *L. philadelphicum*, prefers to hide among the low bushes on the high dry slopes. These with the well-named *L. superbum* are among the richest adornments of the New England summer fields and woodlands.

In the advertisement of Rainbow Freesias by August Rolker & Sons last week the line "in fine assortment" should read "in fine mixture of fancy shades."

SEED TRADE

AMERICAN SEED TRADE ASSOCIATION

Officers—President, Kirby B. White, Detroit Mich.; First Vice-President, F. W. Bolgiano, Washington, D. C.; Second Vice-President, L. L. Olds, Madison, Wis.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending July 28, were recorded as follows:

Bulbs—England, \$5; Bermuda, \$5,300; Japan, \$1,068.

Plants—Belgium, \$1,256; England, \$75; Guatemala, \$187.

Red Cloved seed—France, \$11,123; England, \$130.

Clover seed—France, \$9,499; Russia, \$9,583; New Zealand, \$1,206.

Grass seed Ireland, \$324.

Other seeds—France, \$3,142; Netherlands, \$81; British East Indies, \$5,515; Hongkong, \$108; Argentina, \$2,864.

Nitrate of potash—British Indies, \$37,286.

Nitrate of soda—Chile, \$74,404.

Other fertilizers—England, \$134; Mexico, \$702; Argentina, \$450.

British Prohibit Bulbs by Parcel Post.

The following deputation waited on Mr. Enthoven, the new Controller of Imports at the Board of Trade on July 17, by special invitation. Mr. Cuthbertson and Mr. G. H. Barr (representing the Horticultural Trades Association), Mr. Hunter, of Messrs. Austin and McAshlan (representing the Scottish Seedsmen), and Messrs. Sherwood, Shorthouse, Sylvester, Mr. T. Page and Mr. R. Page (representing the Hampton Growers' Association). The three points discussed were:

1. The Importation of Bulbs from Holland by Parcel Post.

Mr. Enthoven, on behalf of the Board of Trade undertook that all parcels which may contain bulbs or other prohibited articles from Holland, Denmark, Sweden and Norway will be stopped by the Customs or Postal Authorities.

2. Imports of Japanese Bulbs.

Mr. Enthoven agreed to admit up to 50 per cent. of 1915 imports provided that the shipments are effected before October 31, and subject to the Trade devising a scheme whereby the Board may be assured that this quantity will not be exceeded.

3. Cut Flowers.

Mr. Enthoven fully appreciated the fact that great loss would be caused the Flower Growers in this country if cut flowers are allowed to come in

from those countries from which the importation of bulbs is prohibited, and he said the matter would require to be dealt with when any New Prohibition Orders were being issued. It would be kept in mind.

Hort. Trade Journal.

Those Seductive Catalogues.

Extract from "A Summer in Our Garden," by Mrs. Gertrude Ellis Skinner, Austin, Minn. in *The Monthly Hort. Circular*.

Summer in our garden begins with the arrival of the first seed catalogue in January, and closes the day before its arrival the next January. We may be short on flowers in our garden, but we are long on seed catalogues in our library. We do not believe in catalogue houses excepting seed catalogues. We find them more marvelous than the Arabian Nights, more imaginative than Baron Manhausen, and more alluring than a circus poster. We care not who steals the Mona Lisa so long as S— sends us pictures of his cabbages. The art gallery of the Louvre may be robbed of its masterpiece without awakening a pang in our breasts, if D— will only send us the pictures of those roses that bloom in the paint-shops of P—. Morgan may purchase the choicest collections of paintings in Europe and hide them from the public in his New York mansion, if M— will send us pictures of watermelons, such as were never imagined by Raphael, Michael Angelo or Correggio.

While the world watches the struggle for the ownership of some great railway system, the control of some big trust, the development of some enormous enterprise, we watch for the arrival of the seed catalogue to see which artist can get the most cabbages in a field, the most melons on a cart, or make the corn look most like the big trees of Yosemite. Don't talk to us of the pleasures of bridge whist if it is not to be compared with the seed catalogue habit.

In the seed catalogue we mark all the things we are going to buy, we mark all the new things. There is the wonderberry, sweeter than the blueberry, with the fragrance of the pineapple and the lusciousness of the strawberry! We mark the Himalayaberry—which grows thirty feet, sometimes sixty feet in a single season. Why, one catalogue told of a man who picked 3,833½ pounds of berries from a single vine, besides what his children ate. Our Himalaya vine grew four inches the first season and died the first winter. We were glad it did. We did not want such a monster running over our garden. We wanted to raise other things.

But we did not lose faith in our catalogues. We believe what they say just as the small boy believes he will see a lion eat a man at the circus, because the billboard pictures him doing it.

If we ordered all the seeds we mark in the catalogue in January, we would

require a township for a garden, a Rockefeller to finance it and an army to hoe it. We did not understand the purpose of a catalogue for a long time. A catalogue is a stimulus. It's like an oyster cocktail before a dinner, a Scotch high-ball before the banquet and the singing before the sermon. S— knows no one ever raised such a crop of cabbages as he pictures or the world would be drowned in sauer kraut. If the Himalayaberry bore as the catalogues say it does we should all be buried in jam. You horticulturists never expect to raise such an apple as L— describes; if you did, they would be more valuable than the golden apples of Hesperides.

But when we get a catalogue we just naturally dream that what we shall raise will not only be as good, but will excel the pictures. Alas, of such stuff are dreams made! We could not do our gardening without catalogues, but they are not true to life as we find it in our garden. We never got a catalogue that showed the striped bug on the cucumber, the slug on the rose bush, the louse on the aster, the cut worm on the phlox, the black bug on the syringa, the thousand and one pests, including the great American hen, the queen of the barnyard, but the Goth and vandal of the garden.

But the best part of summer in our garden is the work we do in winter. Then it is that our garden is most beautiful, for we work in the garden of imagination, where drouth does not blight, nor storms devastate, where the worm never cuts nor the bugs destroy. No dog ever uproots in the garden of imagination, nor doth the hen scratch. This is the perfect garden. Our golden glow blossoms in all of its auriferous splendor, the Oriental poppy is a barbaric blaze of glory, our roses are as fair as the tints of Aurora, the larkspur vies with the azure of heaven, the gladioli are like a galaxy of butterflies and our lilies like those which put Solomon in the shade. Every flower is in its proper place to make harmony complete. There is not a jarring note of color in our garden in the winter time.

New York, N. Y.—A new seed store has been opened at 87 Barclay street, by Edward A. Peth and Frank Dugan. Both of these gentlemen have had long experience in the seed business.

CATALOGUES RECEIVED.

V. Lemoine & Son, Nancy, France. Special July, 1916. List of Delphiniums and Peonies. Autumn Catalogue will be issued in September.

H. G. Hastings Co., Atlanta, Ga.—Catalogue No. 52, Fall 1916. An excellent seed catalogue, especially interesting on field and farm grain seeds, grasses, vegetables, etc.

John C. Moninger Company, Chicago, New York and Cincinnati.—"Moninger Greenhouse News." This is not exactly a catalogue but it is identical in purport. Interesting papers are included, written by A. Hammarstrom, O. Hirschfield, C. P. Guion, R. Kurowski and J. A. Kinney and there are some very instructive pictures.

NEWS ITEMS FROM EVERYWHERE

WASHINGTON, D. C.

A hurried canvass shows that Washington will probably be represented at the convention in Houston by William F. Gude, his son Ernest, and Adolph Gude, and Mr. and Mrs. Chris. Schellhorn.

The florists were invited to participate in the family excursion to Chesapeake Beach, to be given by Kallipolis Grotto, the Masonic playground, on August 23. It is with this organization that the florists have on several occasions given joint affairs of this kind.

Gude Bros. Company is rebuilding five of the large houses which have been a part of the Anacostia range for about 23 years. Adolph Gude, who is in charge of the work, had the old frames torn down and is replacing them in another location with new material.

The Senate has just passed a bill which, if similar action is taken by the House, will give to the U. S. Botanic Gardens an area of more than twice its present size. The bill contemplates the addition of what is now known as East and West Seaton Park, a government reservation. The committee stated that this was but a part of the plan to make the gardens the equal of, if not superior to any others in the world. Back of the measure are a number of prominent Washington florists who are very desirous of seeing it enacted into law.

NEW YORK.

W. B. Thompson of Yonkers, has donated to the Queens conservatories in Forest Park a superb collection of crotons.

The list of excursionists leaving by steamer on Tuesday, August 8, bound for Houston, included John G. Esler and daughter, R. Vincent, Jr., Mrs. Vincent and John A. Vincent, Joseph Heacock, Jos. A. Manda, A. T. Delamare and J. R. Lewis.

ST. LOUIS.

J. F. Anmann and family are motoring through Indiana for a month.

F. H. Weber, with his family, is summing at Estes Park, Col. They will return September 1.

F. Grossart, superintendent of Vahalla cemetery, will this summer build two new greenhouses and a large conservatory.

The new St. Louis Wholesale Cut Flower Co. are having a new building erected at 1410 Pine street, to be ready by September 5. David Geddes and J. J. Beneke will manage this new company.

The Apple Growers' Association held its first meeting here August 2 and 3, with an attendance of 100, from all parts of the States. Officers elected were: President, H. M. Dunlap, Savoy, Ill.; vice-president, W. S. Forgey, St. Louis, Mo.; secretary, H. C. Irish, St. Louis; treasurer, W. F. D. Batjer, Rodgers, Ark.

PITTSBURGH.

An attractive addition in the trade is the Liberty Florists at 6207 Franks-town avenue, near Penn. James D. Grafiodio is proprietor and his nephew, Charles Plaganes, manager. The latter received his experience in New York City.

Vacationists include Wm. Allen of Homewood Cemetery, and family, on trip east; H. P. Langhans at Lake Erie; Miss Sophie Glasser at Atlantic City; John Lipp to New Orleans by water; Mr. and Mrs. Julius Ludwig at Thousand Islands; J. Wilkinson Elliott to Holland on business; B. L. Elliott, motoring in New England; Mr. and Mrs. Henry Meuschke in Erie, Pa.; Howard Hook at Atlantic City; W. B. Hall in Beaver County; Miss Maude Yeakel at Parnassus on the Allegheny river.

BOSTON.

The big electric storm of Tuesday, this week did considerable damage to field crops of all kinds, especially in the suburbs to the north. Reading experienced a hail storm and much greenhouse glass was broken. F. E. Emory lost 1,000 lights. J. N. Webster 800, J. W. Foote 1,000, Alfred Ellis 75, and John W. Winston 800.

NEWS NOTES

Manasquan, N. J.—The Linnaberry property on North Main Street has been purchased by George H. Gregory, florist.

Bellows Falls, Vt. (Gretna Green)—A marriage license was issued here on Aug. 8 to Henry R. Duvarney, a florist, and Florence E. Wood, both of Clinton, Mass.

Pittsfield, Mass.—A party numbering sixteen of the gardeners on the various Berkshire estates with their wives, were entertained on Monday evening, July 24, by Mr. and Mrs. C. A. Mills at their home on Appleton Ave., this city.

Cincinnati—Mr. and Mrs. J. A. Peterson are the only Cincinnatians to attend the S. A. F. & O. H. convention this summer.—J. T. Turner and Glenn E. Moore of Rushville, Ind., were in this city last Sunday.—Miss Laura Murphy has gone to the Cheneauxs for a two weeks' vacation.

South Natick, Mass.—Despite the scarcity of labor, nurserymen throughout the State report increased business over last year. Max Haendler, proprietor of the Old Town Nurseries, states that he has had an exceptionally good season and at the present time is busily engaged in transplanting evergreens, of which he has a very fine stock in various sizes. He anticipates building a new potting shed, as well as starting some additional greenhouses later in the fall.

During Recess

Buffalo Florist Club.

The annual outing of the Buffalo Florist Club was held on Wednesday, August 2, at the Automobile Club Country Home and was a decided success. The party met at the Kasting Co. store and machines were in waiting for a beautiful 16 mile ride to Clarence, N. Y. The party arrived early at the grounds and the long programme was begun.

THE GAMES

In a closely contested baseball game the storemen defeated the greenhouse men; score, 2 to 1. The rule of having only nine men on a side was suspended. The store players were E. Slattery, captain; Moesel, Fiebelkorn, Jerome, Stroh, Lawrence, House, Roach, Gillies, Berg, Taylor, Rodie, Walther, Grever and Kramer. The greenhouse team was composed of Palmer Taylor, captain; C. Berner, Wilke, A. Berner, Harrington, Gittere, Tighe, O'Brien, Bardo, F. Berner, Christman, Compton, Brennan and Schlitz. The batteries were: Store team, Kramer, pitcher; Stroh, catcher; greenhouse team, Gittere, pitcher; Tighe, catcher.

The winners in the 50-yard dash for boys were: Sidney Stall, 1st; Chauncey Neubeck, 2d; John Hunt, 3d. The 100 yard dash for men, 18 years old or over was won by Brennan, 1st; Slattery, 2d; Stuntz, 3d; Kraus, 4th; Kinkel, 5th.

Winners of other contests were: Small boys' and girls' race, Donald Scott, 1st; Fannie Priesach, 2d; Geraldine Reichert, 3d; John Kasting, 4th; Girls' race, Miss Wilson, 1st; Miss Blessing, 2d; Miss Redmond, 3d; Miss Sewell, 4th; Hurdle race for men, Brennan, 1st; Leo Neubeck, 2d; Kinkle, 3d; Tobin, 4th; Three-legged race, A. E. Kiefer and Leo Neubeck, 1st; Ed. Stroh and John Kramer, 2d; Throwing the baseball, men, Roach, 1st; Grever, 2d; Booker, 3d; Scott, 4th; Throwing the baseball, ladies, Miss Blessing, 1st; Miss Berner, 2d; Miss Hoffman, 3d; Miss White, 4th. The greenhouse team won against the store men in the tug-of-war.

The dinner was served at 6.30 P. M. in the spacious dining room of the club and 193 were taken care of. The committee had their hands full in taking care of this bunch and it must be said that it was the best outing yet in the history of the club.

BRIDES BOUQUET AND LADY'S
CORSAGE BOUQUET OF SWEET
PEAS.

Which won 1st Prize at the San Francisco Sweet Pea Show. Exhibited by Art Floral Co., Inc., San Francisco.

ST. LOUIS COUNTY PICNIC.

The St. Louis County Growers' Association will hold its annual picnic August 24 at Creve Coeur Lake. Ar-

rangements are in the hands of Messrs. Rowe, Cerny and Werner and Albert Scheidegger will be marshal.

CLEVELAND FLORISTS PLAN CO-OPERATIVE DISPLAY.

Cleveland florists who are members of The Florists' Club will give a novel demonstration of their enterprise by taking advantage of the great publicity opportunities at the coming exposition in their city. The club has raised a fund for a cooperative exhibit as a feature of the flower section of the Industrial Exposition and Fair, given there September 2 to 9 under the management of M. A. Vinson. This will be one of the most pretentious floral displays ever staged for community benefit and will illustrate the varied uses of flowers and plants.

Timothy Smith, chairman of the flower show committee, has appointed F. C. W. Brown of the J. M. Gasser Co., Charles Russell of the Jones-Russell Co., and Frank Ritzenthaler of Knoble Bros., to plan and execute this most interesting feature display. The committee plan on distributing a neat folder calling the attention of the public to the club's progress in Cleveland.

Among those who have already taken space in the Flower Show tent are B. Hammond Tracy, gladiolus specialist, Wenham, Mass; Stumpp & Walter Co., bulbs and seeds, New York City; Templin, Crockett, Bradley, operating children's flower mission; John Scheepers Co., New York City; Cleveland Bird Lovers' Association; Eagle Wire Works, Cleveland; Liquid Fertilizer Co.; Cleveland Garden Soil Co.; Storrs and Harrison Co., Painesville. A model greenhouse will be erected by Hitchings & Co., Elizabeth, N. J.

Plans are completed for the annual exhibition of flowers, fruit and vegetables in the town hall, Andover, Mass., Friday, Sept. 8, from 5 to 10 P. M., and Saturday, Sept. 9, from 2 to 9 P. M. The exhibition will be by Andover Florists' and Gardeners' club, the A. V. I. S. and the Andover Guild and these organizations expect to make it the best show yet held in Andover.

Flower Market Reports

Flower business has **BOSTON** been very satisfactory during the past week—fully up to what could reasonably be expected at this time of the year. The aggregate sales may not be colossal in amount but the fact that they use up nicely the product as it comes in from day to day tends to stability in values, keeps the curbstone vendor "off his feed" so far as flowers are concerned, relieves the ice boxes of sluggish stock and makes the dealers feel comfortable and generally amiable. As for the past fortnight, asters and gladioli are the most prominent flowers in the market at present. The heaviest part of the early aster crop is already off and the receipts have slackened up temporarily. Gladioli are increasing in quantity and they are very fine as to variety and quality. Prices on these are somewhat lower and will no doubt still tend downward. A few fairly good sweet peas are seen. Carnations are conspicuously absent. Roses are small but clean and sell out readily at respectable prices for summer.

For the past two weeks **BUFFALO** the weather has been intensely hot and, under these conditions, stock under glass has suffered. Roses of old stock are very poor and summer roses are not plentiful. The supply of carnations has been good up to now, but their end is near. Asters are inferior and the early crop is apparently a total failure. Gladioli, too, have suffered by the dry spell and the market is well cleaned up daily. Lilies have had good sales and there is very little coming into the market which is about cleaned up daily.

The unusual summer **CHICAGO** conditions of the past three weeks continue. The local demand for first-class stock

is in excess of the supply and local retailers lose no time when stock is delivered to the wholesalers. The variety of stock is not so much the question as the ability to buy at all. Of the poorer grades, much is used in the cheaper funeral work and some of the balance finds its way to the street fakirs. Out-of-town trade has been good also, for summer supply has been generally curtailed by the heat and drought. Roses are small and soft, carnations are about out of the question. Asters of any size are welcome and there are many more small than large. Lily of the valley is scarce. Gladioli are selling well and the growers will get a good price for them this summer.

The general supply **CINCINNATI** in the market is fair and ample for the demand. Good roses clean up readily. Lilies, speciosum and longiflorums, are in a good supply and meet with a good market. Gladioli and asters are plentiful and the good ones have been selling very readily.

One would think on **NEW YORK** seeing the number of florists' delivery autos that draw up in front of the wholesale flower establishments every morning, that the buyers for the various retailers whose names appear in big letters on these ornate vehicles had important commissions to fill, but it seems to be largely habit that brings them there in these listless August days. In truth there is very little doing anywhere. There is a large supply of roses of not very good quality, a moderate showing of asters of very indifferent grade, and a great abundance of gladioli with plenty of longiflorum and speciosum lilies. Lily of the valley and cattleyas are scarce. Wholesalers might just as well close up at noon every day. Hanging around waiting for business these days is a "stale, flat and unprofitable" existence.

How would you **PHILADELPHIA** like to be a war correspondent — earning a fabulous salary—and your chief sent you down to the Mexi-

Flower Market Reports

(Continued from page 17)

can border to report the war say three columns of live news every day? And when you got there you found there was no war, and nothing to talk about, but that the home office wanted its three columns of "live stuff" just the same! Wouldn't you pity the poor war correspondent—grinding out inanities and sweating his shirt off trying to make it look like news. You wouldn't like it, and you'd pity him. Well, he's no worse off than the flower market correspondent. "There aint no such animile" as a flower market. It's too hot even to get up an argument with an Irishman. Doggone it! I'm going fishing.

Prices remain high, PITTSBURGH trade conditions continuing remarkably good. Considering that at time of writing we are in our fifth week of torrid heat, with frequent hard rains, stock is of fair quality. Last Saturday experienced one of the severest electrical and rain storms ever in this vicinity, horticultural products of all kinds being practically "beaten to pieces." Asters and gladioli of fine quality are now coming in from Ash-tabula and Toledo, Ohio.

The wholesale market ST. LOUIS is in a poor condition as to supply. The heat wave has been here for the past few weeks. Stock in the field is suffering greatly for the want of rain, while indoor stock suffers from the heat. The cut flower trade is at an extremely low ebb at the present. At the wholesale market we find a lot of poor stock. Asters and gladioli are in good demand. Roses and carnations are very poor. Outdoor flowers are drying up in the field.

Business is very WASHINGTON flat, although it is expected that the month will average up better than the same period last year. Some very good dahlias are coming in now, and asters show an improvement, although it is conceded that these are something of a failure this year. It is a very hard matter to get roses that amount to anything. Some good summer sweet peas and gardenias are in the market. Gladioli make a good showing.

A NATIONAL FLOWER.

There is a move now for a National Flower. Some mention the mountain laurel, but that will not grow in a fourth of our domain. The Iris can be made to grow in every State of the Union. Every family anywhere in the U. S. can raise them. This can be said of no other flower. The peony cannot endure the heat and drought of the semi-arid regions—nor can the phlox. We have enough native sorts to give it prestige. I have seen beautiful wild ones growing on the stony bluffs of the Black Hills where the mercury is often 40 below and there are scores of people now originating new kinds. There are 170 native sorts, besides over 1,000 fine hybrids. They are always on hand for Decoration Day and will fill all the requirements of a national flower.

THE GREENHOUSE SALESMAN PAST AND PRESENT.

Much has been said and written about the evolution of greenhouse construction, growing methods and all general conditions surrounding plant cultivation under glass.

Everyone old in the business can trace the different periods and methods of construction. From the "large" 10'0 houses at the start gradually increasing in width to the modern steel structures of today with but two intermediate supports in an 84 foot span and these spaced every 12 lights of 16" glass in length of house, is a wonderful development.

The time consumed for these various improvements was comparatively short considering everything and a great deal of credit belongs to those whose efforts brought them about. There is no doubt but what the various florists and others directly connected with the growing helped to a large extent. It was strictly for their benefit to do so. There are others, however, who should come in for a large share of the credit and among them are the greenhouse material salesmen.

These men mingling with the trade in pursuit of business saw that a great many different methods were used. Nothing had been standardized and everyone tried to incorporate their ideas into the houses. After a while the companies manufacturing greenhouse material saw the possibilities in the business and further saw that some radical improvements had to be made.

The first thing they did was to hold consultations with their various representatives and tabulate the numerous irregularities of construction. The salesmen were then consulted in connection with the engineering departments and improvements started. Of course, some ideas were correct and some were not, as in all things, but the general tendency was forward. Some of the improvements were scoffed at and ridiculed by the florists and yet it was no easy matter to obtain their views of what should be done. If a certain man had good success with a certain style of structure he considered it a business secret and refused to advance views as to the rea-

sons why. Others tried the same form and failed, but possibly a few points were gained.

As stated before, however, the tendency was forward and gradually the ranges and houses grew larger, better and more economical to build and operate.

But now how about the salesmen themselves? With all these changes it was impossible for the men to "stand still." More education was constantly in demand. A great and varied number of problems confronted them. Heating, ventilating, sprinkling and innumerable other side lines entered into the business. In order to gain the confidence of the prospective customer he must be able to answer all questions pertaining to the business. In order to do this both education and experience were necessary. No longer could he take a catalogue and sell gutter, sash, bars, sill, ventilators, etc., and consider his work finished. When this was all the goods furnished the prospect, personality and a man's ability to make friends were the main requirements. Now a different and formidable type of salesman enters the field, the sales-engineer. He plans and works with the prospective buyer, suggests a more practical and economical way of doing this thing and the other. Everything must be considered and nothing omitted. If he can show the grower how to save money he has a big advantage.

WHEN EMPLOYEES, COLLECTORS OR AGENTS HOLD OUT MONEY.

A case which recently came within my own experience seems to make it clear that there is need of explanation as to the legal difference between money held—as for instance, by an employee—under claim of right, and money simply not turned over, as where an employee collects it and appropriates it to his own use. In the first case it is never safe to issue a warrant, and he who does it is liable to be made defendant in an action for damages for malicious prosecution or false arrest. In the second case arrest is not only safe, but is the logical and proper thing to do.

Cases are constantly happening wherein an employee whose duty it is to collect money for his employer, fails to turn it over. Sometimes, perhaps usually, the reason is that he has spent it. He is an embezzler and of course can and usually ought to be arrested. But it often happens that the employee refuses to turn it over because he says he doesn't owe it. His employer owes him something, and he decides he will just hold what he has collected as security for his own claim. The employer who arrests an employee that takes that stand, even though the employee's claim is wholly unfounded, is very badly advised.

Within the past month a case has been decided (Iowa Supreme Court) which will serve as a very good illustration. A corporation with headquarters in Scranton, Pa., employed a local agent in an Iowa town, whose work was supervised by a district agent. The district agent discharged the local agent; who at the time held certain money belonging to the corporation. The district agent demanded the surrender of this money, but the local agent refused, claiming that the company owed him something. He refused to pay the company until the company paid him. The district agent told the corporation that the local agent was short in his accounts and asked if he should have him arrested. The corporation said to get the advice of a certain attorney and follow it. The local agent was arrested and later he sued for damages for malicious prosecution. He recovered a substantial amount. The corporation made all sorts of defenses, mostly technical, but the court said that when it placed the matter in the hands of the district agent and the attorney, it had practically consented in advance to anything they did. Obviously, the court said, the district agent thought he could settle the matter quickly by the use of criminal proceedings and the corporation that gave him authority to do that was legally responsible.

There is a very great and vital difference between the act of a man who says: "It is true I have some of your money, but I refuse to turn it over because I have a right to hold it," and the act of a man who admits that he has the money but sits silent when payment is demanded.

Not long ago in Chicago a commission merchant to whom certain goods were consigned, to be sold for the account of the consignor, held out part

of the proceeds on the ground that he was entitled to an increased commission on a certain part of the consignment. The whole amount was less than \$50. The consignor became very angry and went to Chicago personally and had his consignee arrested on a charge of larceny! When the case was heard the court at once set the consignee free, because he had not stolen the money, but had held it under a claim of right. And whether the claim was good or bad made no difference.

At once suit for malicious prosecution was instituted against the hot-headed consignor, resulting in a verdict against him of \$1,000. The case is now in the Appeal Court, but I have no idea that it will be reversed.

The first thing to ask yourself when any employee or agent who has collected your money refuses or fails to turn it over is, why does he refuse? If it is because he claims the right to hold it, no matter how flimsy the claim is—if sincere—then it is putting your head into the lion's mouth to issue a warrant. Of course thieves and embezzlers often justify holding out of other people's money by a claim of right. The claim of right must have both a legal and moral foundation. For instance, suppose an employee is suddenly discharged. He claims the house owes him money. The house denies it. The employee goes to the safe or the cash register and abstracts enough to cover his claim. That is larceny, even though his claim was a good one. No man can pay himself in any such fashion. But the position of an employee who had collected money for his employer, with the latter's consent, and still held it, would be different. He would not be guilty of larceny if he refused to hand it over on the plea that his employer was indebted to him. Even if his plea was groundless, it would not be safe to arrest him, unless the employer had full proof in his possession that the plea was merely a subterfuge to excuse the larceny. In that case, it would be reasonably safe to issue a warrant.

(Copyright, June, 1916, by
Elton J. Buckley.)

IN EL PASO, TEXAS.

Joseph P. Madden of Medford, who is now doing border duty with the Fifth Massachusetts Regiment at El Paso, Texas, writes to HORTICULTURE as follows:

"I like it fine. It's a great life and one enjoys soldiering in a place like this. The climate is fine and although a little hot the boys are all getting used to it. The earth here is baked dry and not a bit of vegetation can grow anywhere. In the suburban part of the city there are some small flower gardens that are a delight to the eye. Almost every house has its own lawn and what a difference some water will do to the ground. The grass is thick and spongy. You don't see the like in or around Boston. The grass there seems coarse as compared to the grass here, and people owning small farms near our camp tell me that when they get the water for irrigation purposes from the Elephant Butte dam some fifty miles up the river Rio Grande, thousands of acres will be reclaimed."

The Recognized Standard Insecticide.
A spray remedy for green, black, white fly, thrips and soft scale.

With the exception of our mammoth 36 inch Burnham, two men with a hammer, a wrench and a screw driver, can set up a Burnham.

Two Burnham Tie-Up Facts Worth Tying To

EACH pair of Burnham sections have their own separate tie-up bolts. Long, long ago, we discarded the long tie bolts. Discarded them because of the bothersome blocking and bracing; and tugging and tussling; to set up a boiler.

Discarded them because of the constant danger of cracking sections in the last wrenching-up to draw the sections tight.

Discarded them because when sections were added to enlarge the boiler, the long bolts must either be

spliced out by a blacksmith or entirely new, longer bolts bought.

Discarded them because in case of replacing of a section, it was next to impossible not to loosen up all the sections.

Burnham short-tie bolted boilers are easy to set up. Easy to repair. Easy to add to. And above all, easy on coal.

We can ship promptly, but the railroads are slow on deliveries. So order ahead of time, if you want your Burnham on time.

HITCHINGS GRATES

HITCHINGS grates shake half at a time.

It makes grate shaking easier. But it does a lot more besides. It makes coal bills smaller. Makes them smaller because when you want only a small fire—just enough to keep the early fall or late spring chill out you can bank the back half of the grates with ashes and live only the front half.

BREAK-UPS

WHEN you look at a cast iron boiler, do you ever give a second thought to the uniform thickness of the casting itself? You chances to one you don't.

We guarantee that every one of our sections are cast an even thickness throughout. We don't simply guarantee an even thickness and then when by accident a section breaks and you come back on us to make good, "make all kinds of a boiler."

If it's up to us; it's up to us; and we promptly make good.

To prevent the need of just such makings good, we every once in a while deliberately break up a perfectly good section, just to see if we are making them as good and perfect as we claim we are.

It costs us a lot of money to destroy these perfectly good sections. But it pays you a lot of boiler and crop too. If we don't.

By protecting you against loss we also protect ourselves. It pays us both.

**A Little
Something
On the
Side**

BEFORE we get to the "little something on the side" just let us continue right here what we started several weeks ago, and that is to give you one more "good, husky, and X" shove towards getting your heating all in shape at once.

It's got to be done; no dodging that. It costs no more to do it now. In actual dollars and cents it will cost you more later. You know we go anywhere to talk heating. Or do heating.

Hitchings and Company

NEW YORK

CLEAN-OUTS

KEETING a boiler's fires clean, goes hand in hand with keeping coal costs down.

Soot is one of the best known insulators for heat.

Soot to a boiler, is like carbon to an automobile.

Every Hitchings fire has a separate clean out door, so you can clean any fire, at any time, with any fire. Fifteen minutes once a week will keep them clean as a whistle.

CHIMNEY KITING

HITCHINGS boilers prevent the heat that should go in your coils, from going kiting up your chimney.

Prevents it because of their special tie arrangement which causes the burning gases to travel a long way around before they can go out of the chimney. In every inch of that travel the water ways are greedily absorbing heat. By the time the smoke pipe is reached, there is just enough heat left to make a draft in the chimney.

If it don't go up the chimney it must go in your coils. The more heat going in your coils, the less money goes out of your pocketbook.

Houses To Visit On Your Philadelphia Vacation Visitation Visit

When you land in good old Philadelphia on your vacation trip, leave your luggage at the station, and come right over to the Widener Building, only three short blocks away.

We will not only be jolly well glad to see you, but consider it a pleasure to tell you about the hotels best to stop at, so they won't take all your money away.

Then we can talk over the greenhouse construction points you are particularly interested in, and we will tell you just where you can see the houses that best show them. Perhaps one of us can visit some of the houses with you, which would indeed be a pleasure to us.

As a preliminary guide, below is a list of a few of our houses in and around Philadelphia.

ROSE GROWERS

JOHN STEPHENSON'S SON, Oak Lane, Phila., Pa. One Iron Frame house 72'x850'. Take car No. 24 on 16th Street, marked Willow Grove. No. 55 on 11th Street, marked City Line. Get off at City Line and walk one square.

MYERS & SAMTMAN, Wyndmoor, Chestnut Hill, Pa. Range of Iron Frame houses, 55 and 50 feet wide by 300 feet long. The most direct route is by train from Reading Railroad, Chestnut Hill Branch, to Wyndmoor Station. Time 40 minutes.

GEORGE BURTON, Wyndmoor, Chestnut Hill, Pa. Iron Frame house 60'x300'. Directions same as for reaching Myers & Samtman.

JOHN BURTON, Wyndmoor, Chestnut Hill, Pa. Iron Frame house 50'x300'. Directions same as for reaching Myers & Samtman.

JOSEPH HEACOCK CO., Roelofs, Pa. One Iron Frame house 55'x600'. One Iron Frame house 72'x600'. Train via Phila. & Reading R. R. from Reading Terminal.

MALCOLM FRANKLIN, Yardley, Pa. One Iron Frame house 72'x600'. Directions for reaching same as for Joseph Heacock Co.

STEPHEN MORTENSEN, Southampton, Pa. Range of Pipe Frame houses; also Iron Frame house 60'x300'. Take train on Phila. & Reading R. R. at Reading Terminal, get off at Southampton. Mr. Mortensen also grows carnations.

ELLENWOOD GREENHOUSES, Hatboro, Pa. Range of Pipe Frame houses; also two Iron Frame houses each 60'x200'. Take train at Reading Terminal, get off at Hatboro. Also grow carnations.

AUGUST DOEMLING, Lansdowne, Pa. Large range of Pipe Frame houses. Take train on Penna. R. R. at Broad Street Station; get off at Lansdowne.

CARNATION GROWERS

H. M. WEISS & SONS CO., Hatboro, Pa. Large range of Pipe Frame houses, each 35'x300'. Train by Reading R. R. to Hatboro at frequent intervals.

R. M. EISENHART, Torresdale, Pa. Range of Pipe Frame houses; also one Iron Frame 55'x150'. Penna. R. R. from Broad St. station; get off at Holmsburg Junction. Then take trolley east on Frankford Road, which passes Mr. Eisenhart's place. Also grows violets.

RICHARDS BROS., Kennett Square, Pa. Iron Frame greenhouse 41'x400'. Pennsylvania R. R. from Broad St. Station to Kennett Square.

J. HOWARD THOMPSON, Kennett Square, Pa. Range of Pipe Frame houses and two Iron Frame houses each 41'x200'. Direction as for Richards Bros.

E. C. MARSHALL, Kennett Square, Pa. Range of Pipe Frame houses; also one Iron Frame house 41'x200'. Directions for reaching same as Richards Bros.

E. N. KRONINGER, Allentown, Pa. Two Iron Frame houses 56'x400'. Take Phila.

& Reading R. R. at Reading Terminal; get off at Allentown, Pa.

THOMAS TANSEY, Crescentville, Pa. Pipe Frame house 35'x200'. Take Phila. & Reading R. R. at Reading Terminal and get off at Crescentville.

ROBERT CRAIG CO., Norwood, Pa. Grow plants. Eight houses 40'x150' and range of Pipe Frame houses each 28'x300'. Pennsylvania R. R. from Broad St. Three squares from station.

MACAW BROS., Norwood, Pa. Grow plants. Four Pipe Frame houses each 35'x150'. Directions for reaching same as Robert Craig Co.

ALBAN HARVEY & SONS, Brandywine Summit, Pa. Grow sweet peas. Range of Pipe Frame houses; also one Iron Frame 60'x200' and one Iron Frame 72'x500'. Take P. R. R. from Broad St., get off at Brandywine Summit.

H. J. MULLER, Bala, Pa. Grows Orchids. Iron Frame house 20'x100' and one 20'x200'. Take Pennsylvania R. R. at Broad St. Station and get off at Bala.

SEABROOK FARMS CO., Bridgeton, N. J. Grow vegetables. Range of six Iron Frame houses 60'x300'. Take Pennsylvania R. R. from Market St. Ferry, Camden, N. J. Get off at Finley Station. N. J. Mr. Seabrook will meet any visitors at Finley Station and take them over to the greenhouses.

WAY BROS., Kennett Square, Pa. Grow vegetables. Two Iron Frame houses each 45'x400'. Take P. R. R. from Broad St., get off at Kennett Square.

Make the Garden Attractive and Interesting at All Seasons

PLANT THE BEST STOCK OBTAINABLE OF THE RIGHT VARIETIES

*We Have Attained National Reputation with the
Following Specialties :*

ACONITUM (Monkshood). We have a superb collection of these magnificent border plants.

ASTERS (Michælmass Daisies). The new European hybrids are the finest of Autumn flowers.

SENECIO CLIVORUM. One of Mr. E. H. Wilson's introductions. The finest yellow flowered perennial in cultivation. We offer large flowering clumps.

ASTILBES. Complete collection of the beautiful new varieties.

DELPHINIUM BELLADONNA, EREMURI, PHLOX, PEONIES, MONTBRETIAS, LILIES.

We have splendid plants in pots or from the open of **JUNIPERUS PROCUMBENS, JUNIPERUS COMMUNIS, and JUNIPERUS KORIENSIS,** three beautiful hardy evergreens for ornamental ground covering.

A LARGE VARIETY OF PLANTS FOR ROCK AND WALL GARDENING

The Mount Desert Nurseries
BAR HARBOR, MAINE.

The Glory Fern (*Adiantum Farleyense Gloriosa*)

Adiantum Farleyense Gloriosa

THE GLORY FERN or RUHM VON MORDRECHT

This splendid Fern which so closely resembles *Adiantum Farleyense* in appearance, but which does not require the special skill and care in growing that is necessary to produce good plants of *A. Farleyense*, has quickly made a place for itself not only on account of the fact that it can be produced for little over half that of growing *Farleyense*, but also because either in a cut state or as plants used in decorative work, it will outlast the old variety ten to one, making it an available subject where *Farleyense* can not be used at all. Since its introduction some 5 or 6 years ago there has never been a supply large enough to meet the demand. With this in mind we have prepared this season an extra large stock, which is in prime condition and we now offer select

3 inch pots, \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000
4 inch pots, \$3.50 per doz.; \$25.00 per 100

For a Complete list of seasonable stock see our current Wholesale List.

The above offer is intended for the trade only.

8 in. pots, \$12 per doz.; \$90 per 100

NEPHROLEPIS JOHN WANAMAKER

"The Wanamaker Boston Fern"

A "sport" from Nephrolepis Scholzell,
with longer, narrower, gracefully droop-
ing fronds. It is not so compact in
growth as Scholzell, and therefore does
not decay in the center, and is a durable
house fern. It is a rapid grower, making
an abundance of fronds, and is quite dis-
tinct from any other Nephrolepis.

2½ in. pots, \$8 per 100; \$75 per 1000

4 in. pots, very heavy plants, \$25 per 100; \$200 per 1000

6 in. pots, very heavy plants, \$6 per doz.; \$45 per 100

6 in. pots, extra heavy plants, \$9 per doz.; \$70 per 100

8 in. pots, \$12 and \$15 per doz.

11 in. tubs, \$2.50 and \$3 each

NEPH. TEDDY, JR., SPORT

We think very well of this fern, it hav-
ing all the good qualities of its parent,
Teddy, Jr. The fronds are of darker
green and more undulated.

2½ in. pots, \$8 per 100; \$75 per 1000

4 in. pots, \$25 per 100; \$200 per 1000

NEPH. BOSTONIENSIS DWARF

This is a dwarf form of the old Boston
Fern, same character form and graceful
habit.

2½ in. pots, \$8 per 100; \$75 per 1000

NEPHROLEPIS ELEGANTISSIMA IM- PROVED

This variety is a greatly improved Ele-
gantissima and shows no tendency to re-
vert to the Boston. This will prove a
valuable addition to the crested varieties.
2½ in. pots, \$6 per 100; \$50 per 1000
6 in. pots, \$6 and \$9 per doz.
8 in. pots, \$12 and \$15 per doz.
Larger plants, \$2, \$2.50, \$3 and \$3.50 each

NEPHROLEPIS TODEAOIDES

London Fern. A good, strong grower.

2½ in. pots, \$5 per 100; \$45 per 1000

4 in. pots, \$20 per 100; \$180 per 1000

6 in. pots, \$6 and \$9 per doz.

8 in. pots, \$12 per doz.

9 in. & 10 in. tubs, \$24, \$30 and \$36 per doz.

NEPHROLEPIS SMITHII

The greatly improved Amerpohlii. It is
a compact form, much finer than Amer-
pohlii, and does not break down in the
center. The fronds are carried on wiry
stems. This variety will have a wonder-
ful sale up to a 6-inch pot, being par-
ticularly showy for basket work.

2½ in. pots, \$8 per 100; \$75 per 1000

4 in. pots, \$25 per 100

NEPHROLEPIS BOSTONIENSIS

Wm. K. Harris

The finest variety for large plants, be-
ing a great improvement over the old
Boston.

2½ in. pots, \$6 per 100; \$50 per 1000

4 in. pots, \$20 per 100; \$180 per 1000

6 in. pots, \$6 per doz.; \$45 per 100

11 in. tubs, \$2, \$2.50, 3, 4 and \$5 each

NEPHROLEPIS ROBUSTA

Place orders at once for Nephrolepis
Robusta. The Silver Medal Fern at the
National Flower Show, winning over all
competition. We claim this variety to be
the finest of all crested Nephrolepis, being
exceptionally fine in large sizes. It is the
strongest grower of all the Nephrolepis
Ferns, never reverts, and every plant is
symmetrical and salable in all sizes.

6 in. pots, strong plants, \$50 and \$75 per 100

8 in. pots, strong plants, \$12 and \$15 per doz.

11 in. tubs, \$3 and \$3.50 each

NEPHROLEPIS SCOTTII

Our stock is in superb condition.

2½ in. pots, \$5 per 100; \$45 per 1000

4 in. pots, \$20 per 100; \$180 per 1000

6 in. pots, \$6 per doz.; \$45 per 100

8 in. three-quarter pots, \$12 per doz.; \$90 per 100

11 in. tubs, \$2, \$2.50 and \$3 each

NEPHROLEPIS ELEGANTISSIMA COM- PACTA

A dwarf, compact form of Nephrolepis
Elegantissima, each plant making an
ideal shape.

2½ in. pots, \$6 per 100; \$50 per 1000

6 in. pots, \$6 per doz.

8 in. pots, \$12 per doz.

NEPHROLEPIS SCHOLZELI

This is an ideal crested Fern, holding
the same relation to all other crested
ferns that Scottii holds to the old Boston.

2½ in. pots, \$6 per 100; \$50 per 1000

4 in. pots, heavy, \$20 per 100; \$180 per 1000

6 in. pots, heavy, \$6 per doz.; \$45 per 100

8 in., three-quarter pots, \$12 per doz.; \$90 per 100

11 in. tubs, \$2 and \$3 per doz.

NEW YORK CITY

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—*Cope.*

Cattleyas

Species such as *C. labiata*, *Trianae*, *Mossiae*, *Percivaliana* and others in active growth, will need a liberal supply of water more than *C. Gaskelliana*, *Dowiana* and others which are just coming into growth. Watering should be done in the morning and a spraying each clear afternoon should be given. Do it sufficiently early so that it will dry before night. Night temperatures are variable during September. As a general rule it can run from 60 to 65 degrees. Some nights it will be higher and it will do no harm if it falls to 58 degrees on cool evenings. It is not a good plan to shut the house up tightly on a cool night. Leave some air on to keep the atmosphere pure. Those who can afford roller or other movable shades have a great advantage in being able to give their plants a maximum of light when it is most needed. Keep them well ventilated.

Freesias

In planting freesias we find that the long thin bulbs give far better results than the thick, heavy ones usually sold. Quantity of freesias is not wanted at any particular time, but a succession should be kept up. Give 55 to 60 degrees at night, plant one inch apart in rows, and the rows four inches apart, a few hundred at once, and the same every month. The bulbs will start into growth quickly after September and should have full light as soon as the shoots appear above the soil. The freesia is good on a north and south bench—such a bench as you would use for carnations or mignonette, four inches of soil is enough. After they become well rooted they will stand any amount of feeding.

Lorraine Begonia

Give the plants plenty of room so as to make symmetrical specimens. *Begonia Gloire de Lorraine* at this season is making its fastest growth. They should have a tying now, placing one stake in the center, and looping with raffia each shoot loosely and repeat as the plants may require it. Those that have not been shifted into their final pots should be done without delay. A good compost is turfy loam three parts, sand two parts, and well-rotted cow manure one part. The best kind of pots is azalea pots in 5, 6 or 7 inch. Do not keep them too heavily shaded from this out.

Nephrolepis

One of the surest ways to kill a fern is to let it wilt from being too dry at the roots. Another way but a trifle slower is to keep it soaked and soggy. This suggests the exercise of watchfulness in the watering of ferns of all kinds, but Boston ferns in particular during periods of abnormal weather conditions want care in this line. Ferns of the original Boston type, as also some of the newer forms that were planted into benches last spring have done very well and are now a mass of erect, sturdy frondage. It is now time to work them up into salable form, if not already taken in hand. A fern

compost is three parts fibrous loam, two of leaf mold and one of well-rotted and sifted cow manure. See that the pots are well cleaned and have good drainage. It is only when afforded sufficient time, after being made up into specimens of healthy plants in the transfer from bench to pot that these ferns become the best of marketable decorative plants.

Plants for Christmas

A count-up will very often reveal the want of some stock which at the present time can be advantageously procured through consulting the advertising columns of HORTICULTURE. Now is the time to buy. Among the plants most in demand at Christmas as pot plants are poinsettias, *Begonia Gloire de Lorraine*, adiantums, cocos, pandanus, lilies, cyclamens, azaleas, primulas, ardisias, celestial peppers, Jerusalem cherries, oranges, araucarias, ferns, palms, etc.

Reminders

Where you have late seeds sown see that they do not dry out too much.

Pull up and burn all diseased asters. This helps to keep the disease from spreading.

Nothing is more productive of poor crops than alternate dry and very wet spots on benches of growing crops.

Now that the bulb season is coming have plenty of finely sifted ashes on hand and some long labels to mark them.

Next Week—Bourvardias; Carnations; *Lilium giganteum*; Mil-tonight; Transplanting large Palms; Reminders.

Jackson Dawson: In Memoriam

That is a piece of shocking, though rather expected news which the last issue of HORTICULTURE brings us of the death of old and true Jackson Dawson, beloved by all who had the privilege of his personal acquaintance. Such men as Jackson Dawson are privileged gifts of kind Providence to humanity; his worth is appreciated by all who love nature; he was a beaconlight among botanists and horticulturists. I have always felt the highest admiration for the man and his achievements. I shall always treasure his memory in my innermost soul, and I feel convinced that Jackson Dawson through his work here in our midst has made himself immortal for all future. He has found his reward and his rest. Requiescat. Yours in fullest sympathy.

Friedrich Roelker

An
epochal
convention

The Houston Convention has passed into history and the outcome of the sedulous efforts of the Texas florists seems to have amply justified the National Society in its decision to extend to the South the courtesy of a visit. While we should be sorry to see the custom of electing a president from the city in which a Convention is held and the elevation of every vice-president to the presidency, become an established invariable rule in the S. A. F., yet it must be said that if ever any man deserved election to that high office by reason of earnest, persevering and faithful work, it is the man whom the Convention has so honored on this occasion and we have not the slightest doubt that the year of his administration will be a busy one for him and his fellow-officers in the national organization. We are not fully in accord, however, with everything done at Houston. We should have preferred that the good old plan of the appointment of two directors by the president-elect had been retained. Some of the best workers in the ranks, some of the best presidents the S. A. F. has had, were "discovered" and first brought into active service through the judicious exercise of this privilege by the incoming presidents—men who would never have "run for the office" had such a course been required. It is our sincere hope that the new method of selecting directors may work out as well for the Society as the one which has now been abandoned as "antiquated." To the other constitutional changes we see no particular objection but it may be advisable for the Society to get legal assurance that they have made no mistake under the Charter of the Corporation in adopting the plan of a movable annual meeting based on convenience. The Charter makes the place for the annual meeting optional, but gives no authority to depart from the universal corporation rule as regards the date for holding an annual meeting. The selection of New York for the Convention of 1917 after an interim of seventeen years will meet with general satisfaction throughout the country and the election of A. L. Miller as Vice-President means that "there'll be something doing" right along.

An old
problem

The American Gladiolus Society has been struggling with that hoary old problem—the "amateur" versus the "professional" exhibitor, as to where to draw the line to properly classify each and how to apportion the emoluments and honors so that all classes will get a fair show in the exhibition hall. Like many another earnest and well-meaning body of men before, they find in their ranks almost as many different views on this subject as there are members, and it would seem that the only thing to be done is to follow a "middle-of-the-road" course as it is impossible to satisfy everybody. We are of the opinion, however, that exhibitors, amateurs especially, are not so captious and inconsolable when they fail to win all the honors, as we sometimes think. With the deserving amateur the aspiration to approach perfection for the very love of the work and the pleasure of achievement is as potent as the ambition to win prizes and an occasional or even frequent failure on the latter will neither dispirit nor deter him from future effort, but incite him, rather, to renewed exertion to attain the goal.

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur Ruzicka

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Ruzicka. Such communications should invariably be addressed to the office of HORTICULTURE.

Late Planting

If there are any benches that are not planted by this time they should be rushed right through so that the plants will have a little chance to get established before the cold and perhaps dark weather comes this fall. As mentioned before in these columns care should be taken to see that there is plenty of drainage in the benches so there will be no trouble with the plants drying out unevenly. Also see that the benches are not filled too full. Five inches of loose soil is plenty, as this will firm down to four, which is enough to grow any rose that we know of. If necessary more soil can always be added in the form of mulch but it is very difficult to remove soil from the benches once the plants are planted. Then there is another side to it, and that is the wheeling in and out and putting up the heaps. For a fair-sized place this will be quite an item and every inch of soil means so many dollars and cents. While the plants are being knocked out of pots see that all spot that may be on the plants is removed while the plants are still in the old house. It is not a very good idea to clean them after they are planted, as it will bring the disease into the new house, where if things were done right everything is clean. Care should also be taken to rub off all green scum that may have formed on the ball of the plant while in the pot. Do not take half of the ball away but merely rub off the surface of the soil. Another thing to watch with late planting is to see that the ball is not broken when planting. Some growers have a habit of pressing the plant into the soil. This is wrong and very harmful, for as soon as the ball is broken, hundreds of little roots are torn, and that is why some plants get a severe check, while others planted carefully with ball intact will start right in and grow like weeds. The proper way to plant is to use a trowel, making hole in the soil, plenty large enough, then setting the plant in and firming the soil in around the ball instead of pressing the ball into the soil. No damage is done this way and in a week the roots are away out in the soil. With old plants care should be taken to see that the roots are spread properly so that there will be no bunched-up roots. It is a poor idea indeed to bunch up all the roots in a ball and then stick the plant in. It is only done through ignorance or laziness, as the proper method means more work. The difference is seen later in that while the plants with bunched-up roots are setting and not making a move, those that were planted right will be cutting extras and fancies.

Lime

It is not too early in the season to begin using lime at night after each watering and syringing, more so in the houses that were planted quite early and have made some growth. Use dry air-slacked lime, well screened to make it easy to apply with a pair of bellows. Blow the lime in under the plants, being careful not to

use too much power so that the dust will not be blown away out on the other side of the bench and into the walk where it will do no good at all. The proper way is to blow gently to about the center of the bench and let the lime slowly rise among the plants, taking moisture with it and then settling down gradually, moisture and all. It will also be well to use lime on chilly rainy days when there is no heat in the houses and the air naturally is damp and cold. Lime alone will not correct conditions but it will go a good ways to prevent mildew and spot, both of which promise to be very destructive this year because of the extremely wet weather, around here at least. We have heard of dust up New York State and rain badly needed in other parts of the country, but we have had more than our share of rain this year. Growers in the dry section cannot make a mistake by using lime, as it will not harm the plants in the least and if properly blown under the plants just before sunset will do a lot of good.

Spraying with Copper

We would advise all growers who have even a little trace of spot on their plants to use copper freely this year. The ammoniacal copper carbonate mixture such as has been recommended by us time and time again in these columns. Twice a week will not be too often to apply it and as it can be applied with Nicotine, it need not take much extra time. To apply use plenty of pressure, and a fine nozzle that will throw a fine mist rather than send the spray out in fine drops. It is better to fog all the foliage than to have a wet spot here and there, as the idea is to hit as many of the spores as is possible and destroy these. Growers should not think for a minute though that free use of copper will make their plants immune to attack, as the plants are liable to get spot anyhow if everything is not done to keep them healthy. Because they are sprayed with copper is no reason why other cultural work should be half done or neglected.

Ventilation

Cool nights have already hit us and there is a feeling in the air that fall will soon be here. On nights like these the finest thing to have would be a warm steam pipe in each house, but this is not always possible. What growers should guard against is the closing of the houses down tight at night as soon as a cooler night comes. The plants will stand up much better if they are a little cooler with air than a degree or two warmer with no air at all. In old leaky houses of the low type a crack of air will be plenty but in new wide houses that are tight, as rose and in fact all greenhouses should be, at least six inches of air should remain on all night. Even with heat it will be better for the plants to have plenty of fresh air. With the wide high houses there is not much danger of cold air hitting the plants and giving them mildew. If the ventilators are shut down tight moisture will condense on the glass as well as on the plants and this is not very good for healthy rose growth. Try to avoid it by free ventilation.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Thirty-Second Annual Convention, Convention Hall, City Auditorium, Houston, Texas, August 15, 16, 17, 18, 1916

Meetings Well Attended by Southern Members—R. C. Kerr of Houston, Texas, Unanimously Elected President—All Constitutional Amendments Adopted Without Debate—New York Chosen for 1917 Convention, St. Louis for 1918

OFFICERS ELECTED—President, Robert C. Kerr, Houston, Texas; Vice-president, A. L. Miller, Jamaica, N. Y.; Treasurer, John J. Hess, Omaha, Neb.; Secretary, John Young, New York City

OPENING SESSION.

The Convention opened promptly according to schedule on Tuesday afternoon, August 15, in Convention Hall. The meeting was called to order by Vice-President Kerr, and after prayer by Rev. W. S. Jacobs, Hon. Ben. Campbell, Mayor of Houston, extended a whole-souled welcome to the visitors from afar, to which W. F. Gude made an appreciative response. President MacRorie received a vociferous greeting as he stepped to the front to deliver his address.

PRESIDENT'S ADDRESS.

Ladies and Gentlemen:—

It hardly seems a year ago that our great National Society sat in Convention at San Francisco, California. I distinctly recall the genuine pleasure and the pride that I experienced at that time; the pleasure of seeing in the West so many representative members, and the pride of being honored with a visit by these men who had travelled many thousands of miles to further the interests of our organization. To you, brethren, in this beautiful City of Houston, I bring from California and the West the hearty good wishes of all the craft. Our brothers from the East, the North and the middle West, by their presence bespeak their loyalty. This Convention in Houston means a great victory to you, and you should likewise feel a pleasure and a pride in the work that you have accomplished. It has not been a simple matter to instill into the minds of all our members the necessity of making our society in every sense a national one, nor was it a simple matter to bring this Convention to Houston, but when I look about me and see this wonderful representation, I feel that our efforts have not been in vain. I feel that the South "knows how," and I feel that the Society of American

Florists has acquired an added power, the power of the spirit of the South. We need that spirit and we welcome it, and hope that it will work with us, not only today, but every day in the future.

With the advent of the first convention in the South, the Society of American Florists has opened a new chapter in its history, and, of those,

DANIEL MACRORIE

President Society of American Florists

here assembled in Convention I am sure that there is not one member who is not fully convinced that our move to this wonderful southern field was a move in the right direction.

It is my sincere desire that the support from the South shall be unwavering and constant. When I say support I allude partly to a platform of in-

creased membership. This has been an issue of our Society for several years, and it is no less important today than it has been in the past. It is not so much the idea that any one of us should distinguish himself by bringing in a great number of new members. Everyone of us individually should exert himself to influence every eligible person in his district with whom he comes in contact to join our national society. Our members number today about two thousand, and I hope that before another year is over that we can boast of a membership of three thousand. The effort of this increase should not rest entirely upon the State vice-presidents; it should be the effort of every member individually.

It should not be necessary for me to expound to you the advantages to be gained by such an increased membership. Our usefulness as a national society increases as our membership increases. I would impress upon you particularly the fact that when this Convention is over the work of enlargement in this southern territory continue with the same unty of purpose with which it started, for in such unity there is strength, and we need that strength to accomplish the work that lies before us, and to accrue those benefits which can only be accomplished by thorough organization. Although this is the first Convention held in the South, it shall not be the last. As a national society we must necessarily convene from time to time in all parts of the country, without discrimination, and our society should represent every man engaged in horticulture, whether he be from the North, the South, the East or the West.

Reviewing the divers matters that were brought before the Executive Board at its meeting in March of this year, I wish to say that I am heartily in accord with everything that has been set down, and touched upon by my predecessors, but would ask your

indulgence, while I review some of the matters that have come up during my tenure of office.

National Flower Shows.

The greatest and most successful undertaking in the history of the Society was the Philadelphia Flower Shows of 1916. Philadelphia crowned herself with honors at that show. We cannot bestow upon Chairman Asmus and his able committees too much praise for the splendid work they accomplished in staging this exhibition, and we cannot overlook the co-operation of our subsidiary societies whose wonderful displays of roses, carnations and sweet peas made the show even more attractive, and whose special days brought many thousands of visitors through the gates who had already visited the show. The total gate receipts, representing over one hundred thousand paid admissions, are an indication of how wonderful the displays were. I know that this show will pass into history as the greatest flower show ever held on the American continent. Taking the exhibition from every point of view I think that we must agree that the exhibits were far ahead of anything that has ever before been attempted.

At this point I wish to touch upon the advisability of holding our Conventions on concurrent dates with the National Flower Shows; that is to say, I believe that every second year our annual Conventions could be held in March or in April, or at such time as we decide to have our National Flower Show. The old idea that it would be impossible to secure a good attendance at our Convention at any other date than August, has not proved itself to be a fact. I observed with keen interest at the National Flower Show in Philadelphia, that a great many representative men of our profession from all parts of the United States and Canada were present. It is just this material that is wanted at our National Conventions. To me the National Flower Show had more of the Convention spirit than many of the Conventions that I have attended. At this Show we all concentrated our thoughts on the work that is common among us, and when we left we all felt that we had learned a great deal that would help us in the future. I believe that the spring time is the logical time for our National Shows. A great factor in making a National Show a success in the spring time is the fact that all humanity awakens with a keen appreciation of the beautiful, after a long season when plant life has been practically dormant. Just as the flowers burst forth to welcome the sunshine of the spring, so the spirit of human nature bursts forth with a keen appreciation and eager desire to see and enjoy the beauties of nature. There are many matters of interest that appertain to our work that are called to our attention at National Flower Shows. These matters could be taken up while we are in Convention and I believe that the immediate benefits that would be derived by discussion and through the comparison of notes, would be of far more benefit to us than the social programs which of late years have been characterizing our August Conventions. There are undoubtedly from six to eight large cities

in the United States where the National Flower Shows could be held and where they would be very successful. With this number of cities to draw on, a number of years would naturally elapse before we would complete our circuit and no one city would ever be burdened with a succession of shows. In the smaller cities where we could convene on alternate years, it should be the privilege of the host-city to set the date for the Convention, for when a man invites a guest to his home he aims to have it at its very best; so the Convention City should also have that privilege.

Before I leave the matter of Conventions I want to say that I have noted in past years that there has been a decided tendency to indulge in extended social program. This, of course, has been very pleasant, and duly appreciated, but it seems that we are in a measure losing the purpose for which we assemble. Our Conventions are primarily for trade benefits, and much of the time that is given to entertainment could be utilized for better purposes. Many of the smaller cities that would be glad to have a Convention hesitate because of the expense of entertaining our members, and this condition should not exist, for our purpose as a national society is the promotion of the great work that lies before us. I would, therefore, urge the executive board to carefully weigh these matters. First, the joint sessions of the National Flower Show and the Annual Convention on every second year. Second, the elimination of elaborate entertainment at Annual Conventions, and a strict adherence to matters that will be of trade benefit.

Convention Gardens.

Another instructive feature of our Conventions is the "Convention Garden." The merits of such displays have been well outlined by my predecessors, Mr. Theodore Wirth, and Mr. Patrick Welch, and I heartily agree with them in their views.

Children's Gardens.

Still another phase of our work toward which I would direct your attention is the promotion of an interest in children's gardens. We all know that the love of flowers is indicative of the highest form of civilization, and it is the mission of every member of the Society of American Florists to help to instill the love of flowers and plant life in the hearts of the young. I do not think that we fully realize the extent of the influence toward the moral uplift and esthetic development that is due to the love and appreciation of flowers, and I would, therefore, urge that the Society give its fullest support toward the promotion of the school gardens.

I hope that every member of the Society of American Florists has read with interest the excellent report of our school garden committee of 1915. This committee must have stimulated a great interest in school gardens throughout the country. However, our work does not end there. Further-reaching influence can be exerted by parental oversight and encouragement. It is, therefore, also an individual duty of the members of the Society of American Florists to aid in the promotion of school gardening by wisely administering encouragement and in-

terest in the work of our children, for, in the end, this work of beautification is our chief vocation.

Permanent Secretaryship.

I would ask you to review with me also a matter that for the past months has been of considerable concern to me. I have noted that as our Society grows the administrative work also assumes larger proportions. I believe that we are now large enough to have a secretary who devotes his entire time toward the furtherance of our interests. I believe that such a man should have no other business enterprises to occupy his mind. I would recommend that we make the office of secretary one with sufficient remuneration to keep a man who can devote his entire time toward the promotion of our interests. There will be no lack of work for such a man. He will be constantly occupied, promoting the interests of the society. Should the Convention and National Flower Show fall on concurrent dates, our secretary would have the twofold duty of attending to matters appertaining to both the Convention and the Flower Show. I wish, therefore, that the society would consider very carefully the expediency of adopting the above suggestion. This office should not be a temporary one, and there should be some way of establishing its permanency. We all know that the work accomplished by our society is just as much, if not more, due to the efforts of the secretary as it is to the president or the executive board, as the man holding this office acts as a helmsman and should be fully qualified to handle these affairs, and his mind should be on our work at all times. It seems to me that if this were the case the long dormant period that our society passes through from the date of one Convention to the date of another will become a period of activity and promotion. To be a successful Society we must always be active. I do not wish my remarks to be construed as in any manner criticizing our present secretary. He has discharged the duties of his office with the greatest efficiency and fidelity. We have been very fortunate to have had the services of so able a man as the present incumbent, Mr. John Young. I simply believe that it would be to the interest of all of us that this official, whoever, he may be, should be in a position to devote his undivided attention to the society.

Mothers' Day.

At the last executive meeting of our society it was decided that a collection be made from our members from different parts of the country. The moneys obtained were to be used by Miss Jarvis for the furtherance of her good work—the promotion of Mother's Day. This act, I believe, was a good one, for Mother's Day has become universally recognized throughout the country, and it is up to the florists to continue to advertise and promote the work that has been so well begun. However, while I myself approved such contributions to Miss Jarvis, I do not believe that such a method of securing funds for this work is effective or business-like. As soon as the fund so accrued is complete the work will naturally discontinue and we, as a Society, are here to perpetuate Mother's Day. I would, therefore, recommend

that the Society of American Florists appoint a permanent committee whose duty it will be to constantly stimulate interest in Mother's Day, and I would suggest that this committee look into the matter of securing a permanent fund to promote this work. As regards a suitable flower, emblematic of Mother's Day, will say that considerable discussion was given to this matter at the Convention in San Francisco. It was the consensus of opinion that the Society of American Florists should advocate the use of the white flower for the mother who has passed away, and flowers of any color for the mother living.

Our Late Treasurer.

Before closing I wish to say a word of praise for the dear brother whom we have been unfortunate enough to lose in the last year. On Thursday, June 15 our beloved treasurer, William F. Kasting, was taken from us. Our Society lost one of its most ardent champions and we all lost a very dear friend. It is not necessary for me to review all the good work that Mr. Kasting performed as his work was made known to all of us. Although he had many duties to perform he never begrudged the Society of American Florists his time or his services. Earnest, conscientious, far sighted, outspoken as an opponent, a character with a strong sense of the courage of his convictions, loyal as a friend and generous, Mr. Kasting's memory will always remain dear to every member of our Society.

Conclusion.

In conclusion, as president of this society, I want to thank the various committees who have worked with me during the year in carrying out their duties, and I want to thank every individual member who has shown an interest in our work, and who has given his support to our institution. There is no more charming art or occupation than that of horticulture, there is no vocation more conducive to human welfare than our own. Let us, therefore, unite our efforts toward making the society of American Florists a greater and more glorious institution.

Ladies and gentlemen I thank you for your kind attention and hope it will not be many years before we again enjoy the unbounded hospitality of the South.

The minutes of the Executive Board, report of Secretary, report of Treasurer, Washington representative and chairmen of committees then followed and the reports of State vice-presidents were ordered to be printed. We publish in this paper such of the above-mentioned reports as our space will permit and the balance will appear in next week's issue of HORTICULTURE.

REPORT OF SECRETARY JOHN YOUNG.

Mr. President and Members:

It is pleasing to be able to report to you that in point of membership our Society is stronger than a year ago. This condition should incite gratification, the more because our Convention of last year was held in a city remotely West, and our gathering this year takes place in a city almost equally remote to the South. Our Convention last year was the means of our secur-

ing a large and valuable addition to our membership, our rolls at the close of 1915 showing an increase in the State of California alone of 112 members in good standing. There is every reason to believe that the Convention of this year will result also in a substantial influx of members.

The following have sent in one or more names for membership from January 1st to July 1st, 1916:

Secretary's office, 61; W. J. Keimel, Director, 10; R. C. Kerr, Vice-President, 10; Florists' Telegraph Delivery, 14; C. L. Baum, Director, 7; Frank Steinbach, State Vice-President, 6; J. J. Hess, State Vice-President, 3; J. H. Pepper, State Vice-President, 3; Lon Foster, State Vice-President, 2; H. C. Neubrand, State Vice-President, 2; American Dahlia Society, 2; W. R. Nicholson, State Vice-President, 1; George Schulz, State Vice-President, 1; J. R. Von Boehove, 1; J. A. Peterson, 1; A. A. Niessen, 1; M. Mills, 1; Charles Plumb, 1; George Hildenbrand, 1; Florists' Hall Association, 1; Robert Shock, 1.

Our Conventions.

Our Conventions continue to hold the interest of the trade at large, and

JOHN YOUNG

Secretary Society of American Florists

friendly competition for the honor of taking care of a convention is still keen, as may be judged from the fact that there are likely to be several invitations for the 1917 Convention.

There is noticeable, however, very generally throughout our ranks a desire to eliminate much of the entertainment which has of recent years characterized our Conventions. Our membership is now so large that the attendance at some of our gatherings is much too great to allow of the extension of the hospitality which many cities would consider as befitting the occasion, and the expense and work incident thereto is necessarily such as to deter many cities from attempting to assume the role of "host." Our hosts in the South have recognized this sentiment and have established a precedent which is worthy of continual observance, by cutting out all extravagant entertainment and arranging a simple yet most enjoyable series of trips and functions which shall not in any way tend to diminish the attendance at our business sessions, or through expense create a burden the

carrying of which might prove embarrassing in many ways.

Proposed Changes in By-Laws.

At the present Convention the Society is to act upon several changes in our By-Laws affecting the policy hitherto followed in the conduct of our affairs. These changes have been thoroughly considered by our Executive Board and endorsed by that body as tending to the better and more equitable conduct of our work.

It will be noticed that through the affiliation plan now incorporated in our By-Laws our Executive Board is greatly increased in size, lending greater strength to its deliberations and work. It should be the object of many more clubs and societies to so increase their membership in this Society as to enable them to obtain seats upon our Board, and thus extend the usefulness of our organization and increase the value of its work along horticultural lines.

The establishment of the Committees on Convention Garden, proposed Bureau of Collections and Credits, Publicity, and American Products may naturally be expected to result in action which should prove highly conducive to the general welfare of the trade. State Vice-Presidents, by explaining the work expected of these committees, should be able to induce many florists not at present conversant with our work to join our Society. In this connection I would invite State Vice-Presidents to more closely cooperate with the secretary's office in the work of extending our membership. While the secretary during this year has sent out numerous appeals to florists in the different States, necessitating considerable expense and much labor, the response has not been as great as expected. The influence of our State representatives should be highly effective in this work, especially when exercised in a personal way, and any assistance the secretary is able to give in furthering it is at all times available. Although through the growth of the Society and the extension of its plans the work of the secretary's office has been greatly increased, requests from other officers for assistance in their work will have immediate and cheerful attention.

Mothers' Day.

Considerable interest has been shown by our members in the work of the International Mothers' Day Association, which is headed by Miss Anna Jarvis, the originator of Mothers' Day, and, as will be seen by the published list, a substantial fund has been raised for the use of Miss Jarvis in the prosecution of her work. It is to be regretted that the movement to raise a fund had inception with more than one organization, but it may be that the organizations acting as sponsors for the fund may another year arrange matters so that the work of all bodies may be in harmony.

Trade Exhibition.

While our Trade Exhibition this year is most commendable, it has suffered somewhat in its extent owing to distance from Eastern markets, with resultant high transportation charges. The great European war, too, is still responsible for the diminishment of exhibits of the novelties of foreign man-

ufacture which for many years have helped our displays.

National Flower Show.

Our National Flower Show, at Philadelphia last March, proved to be a huge success. Chairman George Asmus, in the report which he will make to the Convention, will deal with the work incidental to the preparations for the Show and the results accomplished. The Society is to be congratulated upon having for the fourth time successfully organized and carried out an exposition showing the advance of horticulture in America, an exposition eclipsing all predecessors.

Necrology.

We have lost through death:

Edwin Lonsdale (died), Sept. 1, 1915; W. Atlee Burpee (died), Nov. 26, 1915; Wm. Murphy, Sept. 27, 1915; Frederick W. Bruenig, Feb. 25, 1915; Albert McCullough (pioneer), Jan. 13, 1916; Robert Haentze (died), May 3, 1916; Max Rudolph, Feb. 22, 1916; Conrad Bergestermann, Feb. 20, 1916; William Young, Nov. 11, 1916; Jos. H. Cunningham, March 4, 1916; August Krueger (died), March 3, 1916; Wm. F. Kasting (died), June 15, 1916; Walter P. Stokes (died), July 1, 1916; Wm. Tricker, July 11, 1916; John W. Poehlmann, July 14, 1916.

It is with profound regret that in this list I have to chronicle the death of three more than ordinarily prominent members of our trade: Edwin Lonsdale, W. Atlee Burpee and William F. Kasting.

Mr. Lonsdale was a past president of our Society, and for one year served as its secretary. He was a pioneer member, and keenly interested in our organization. His services were at all times available in any work of the Society in which his knowledge and skill were of use, and he gave them unstintingly, officially or otherwise. His willingness to help a fellow member whenever possible to solve horticultural problems was heartily appreciated, and he will be greatly missed by many of us who have sought his counsel.

Mr. Burpee was a life member, his membership dating from 1886, the second year of the Society's existence. He took a great interest in the Society's affairs, and gave evidence of his interest by his earnest support of everything tending to advance our work. He was one of the most widely known members of our organization, and his delightful personality endeared him to all who came in contact with him.

In the death of Mr. Kasting, our late highly esteemed treasurer, our Society sustains a great loss. His sudden demise on June 15 came as a shock to us all. Few there are in the Society who did not know him, and expressions of sorrow at the time he was called away were general. His interest in the affairs of our Society was most intense in character, and his counsel was sought in all our plans and projects. He was a life member, and served as president in 1906. His efficient services as our treasurer for several years have played an important part in our advancement, and his business sagacity was ever a protection to us against unwise investment. We shall miss him for his companionship and his business acumen, both of which we could ill afford to lose.

Plant Registration.

The following plants have been registered since the last Convention:

No. 629—Dec. 4, 1915. *Canna Lafayette*, by Conard & Jones Co., West Grove, Pa.

No. 630—Dec. 4, 1915. *Canada Windmar*, by Conard & Jones Co., West Grove, Pa.

No. 631—Jan. 1, 1916. *Cattleya Percivaliana Roeblingiana*, by Lager & Hurrell, Summit, N. J.

No. 632—Jan. 15, 1916. *Cattleya Percivaliana Aurora*, by Lager & Hurrell, Summit, N. J.

No. 633—Jan. 15, 1916. *Cattleya Percivaliana spectabile*, by Lager & Hurrell, Summit, N. J.

No. 634—Jan. 15, 1916. *Cattleya Percivaliana resplendens*, by Lager & Hurrell, Summit, N. J.

No. 635—Jan. 15, 1916. *Cattleya Percivaliana Stanley Ranger*, by Lager & Hurrell, Summit, N. J.

No. 636—Jan. 15, 1916. *Cattleya Percivaliana superba*, by Lager & Hurrell, Summit, N. J.

No. 637—Jan. 15, 1916. *Cattleya Percivaliana grandiflora*, by Lager & Hurrell, Summit, N. J.

No. 638—Jan. 15, 1916. *Cattleya Percivaliana gigantea*, by Lager & Hurrell, Summit, N. J.

JOHN J. HESS

Treasurer, Society of American Florists

No. 639—Jan. 15, 1916. *Cattleya Percivaliana expansa*, by Lager & Hurrell, Summit, N. J.

No. 640—Jan. 15, 1916. *Cattleya Percivaliana atropurpurea*, by Lager & Hurrell, Summit, N. J.

No. 641—Jan. 15, 1916. *Cattleya Percivaliana oreol*, by Lager & Hurrell, Summit, N. J.

No. 642—March 11, 1916. *Rose Bedford Belle*, by Bedford Flower Co., Bedford Hills, N. Y.

No. 643—May 27, 1916. *Freesia splendens*, by Rudolph Fischer, San Gabriel, Cal.

No. 644—July 8, 1916. *Salvia Elizabeth Dunbar*, by John Dunbar, Rochester, N. Y.

Medals.

Silver medal awarded Bassett & Washburn, for Carnation Belle Washburn, Jan. 26, 1916.

Bronze medal awarded Charles Weber, for Carnation Laura Weber, Jan. 26, 1916.

Mothers' Day Fund.

The list of subscribers to the Mothers' Day or Miss Anna Jarvis fund numbers 100 and the amount subscribed totals \$634.

TREASURER'S REPORT.

Receipts and disbursements for the year 1915 and balances of the several funds are shown in detail on the late treasurer's report to the Executive Board at its annual meeting last spring, the following being a summary of that report:

Permanent Fund.....\$19,817.88
General Fund.....11,615.74
National Flower Show Fund.....1,654.34

\$33,117.96

The Treasurer's Report up to July 5, 1916, shows balances as follows:

Permanent Fund.....\$21,150.80
General Fund.....21,645.81
National Flower Show Fund.....6,104.13

Total Amount Invested.....\$49,200.74

REPORT OF THE WASHINGTON REPRESENTATIVE, WM. F. GUDE

The last year has been a busy one for the Washington representative. While there are no specific duties to be performed by that officer, yet there are daily calls to answer questions, both locally and by mail on all manner of propositions, and also to contribute such information as he can to all members of the S. A. F. and O. H. seeking the same. He is particularly called on to assist the various committees. There has been much legislation under discussion in Congress during the past year, affecting our industry, such as the unfair competition or anti-dumping law, mail censorship, freight embargo, a bill to enlarge the Botanic Gardens at Washington, D. C., and also a bill making the mountain laurel the national flower of the United States. Other matters also have been brought to my attention, all of which have been dealt with through the proper committees, and will be reported on later at this session.

The rose gardens at the Arlington Experimental Farm are progressing nicely. While they have not advanced as rapidly as we had hoped, yet they promise to be in fine shape in another year or two. We have to date 687 varieties of roses in this rose test garden, including many from foreign countries, Germany, France and Ireland, and a consignment in the latter part of July from Australia. This is as it should be, and we hope our friends and fellow-florists from all parts of the world will continue to send roses for this garden. Again, we ask that anyone having new stock to be tested or any varieties of roses that are not already planted in the test garden at Wash-

ington, D. C., contribute such plants to the Department of Agriculture which will have them properly placed and tested. This particular garden is for the benefit of all the members of this society, and in due time will prove of untold value to all concerned. Your committee also urges that wherever practical, names for all plants and particularly roses, be confined to two words.

It is pleasing to note that at the National Capitol, the parks and school grounds are being more and more embellished with artistic planting, beautiful flowers and shrubbery, all of which tend to create a love for the beautiful, not only for the residents of Washington, but to the thousands of visitors who come to the National Capitol annually from every section.

A notable step in the right direction was taken on May 31st of this year by the introduction in the Senate by Mr. Gallinger of a bill to increase the area of the United States Botanical Gardens. The bill provides for adding some twenty acres of ground to the present site of the Botanic Gardens. After thorough consideration by men qualified to know, this would seem to be the proper place for the Botanic Gardens. To remove it five or six miles from the present location where it would be inaccessible to the many thousands who visit Washington each year, would be most unwise, yet such a move has been advocated. We hope the bill will pass at this session. At any rate, it would be in order for this body to stamp its approval upon such course, after you have heard the argument by Mr. Gallinger on the bill which is herewith appended, and which I will read.

Business, in all lines and branches in the National Capitol during the past year has been generally good, and the reports from all sections of the country indicate that business has improved wonderfully, and that brighter days are in store for the florists and their profession.

Committee on Legislation.

Wm. F. Gude, Chairman.

Many matters have been brought to our attention affecting the different branches of our profession. Early in the year, the matter of postage on catalogues and circulars was taken up on the request of several of the large mail-order seed houses. The request made was not for a reduction in postage, but simply for permission to mail circulars and catalogues at the pound rate (irrespective of zone) at the same rate that now pertains to the mailing of catalogues. The bill was introduced in the United States Senate to bring relief to the members requesting this change, but after conferring with the powers that be, it was found, to have this permission granted might materially affect other lines of business, as well as our own, adversely, and we, therefore, decided not to press the matter.

Mail Censorship.

During the spring months a serious condition menaced the interests of importing florists by reason of the British censorship of the mails. The consular invoices and bills of lading were removed by the censors from the ships bringing the goods, and without

the documents these perishable shipments could not be released or removed from the docks. As cables were suppressed and no relief from this intolerable condition was in sight, your committee interviewed the State Department officials, also the British Embassy, with the results that arrangements were made whereby such important documents would be in future placed in a separate mail bag and would not be removed by the British censors with ordinary mail.

Freight Embargo.

As a result of the withholding of shipping documents by the censors, large shipments of perishable freight accumulated on the docks at the ports of entry—causing a tremendous freight congestion. In the effort to relieve this blockade, the railroads embargoed all outgoing and incoming freight from the terminals, which made it impossible to forward freight after it was released by the receipt of the delayed shipping documents. In this crisis, your committee interviewed railroad officials, and as a result of its action the railroads were ordered to lift the

WILLIAM F. GUDE

Washington Representative, Society of American Florists.

blockade as applied to shipments of Holland and Belgian plants which were then arriving in large volume.

Belgian Shipments.

Your committee is able to report that in most instances permits have been given by the British and German governments to Belgian shippers, and that unless some unforeseen difficulty develops, the fall shipment of azaleas, etc., will arrive from Belgium on schedule time from Rotterdam.

National Flower.

To officially recognize the mountain laurel as the national floral emblem for the United States of America, a joint resolution was introduced in the House of Representatives, June 1st, 1916. This resolution, if enacted into law, would make the mountain laurel the national flower. We immediately requested the introducer of the resolution not to push the bill until this or-

ganization could pass upon it. We were assured that every opportunity would be afforded this organization to file its recommendation in the matter. We also asked the horticultural press to give this matter wide publicity, and to request suggestions for or against the resolution. In every instance, except one, the replies were in favor of the mountain laurel as the national flower. We might further state that as far back as 1881, the mountain laurel was advanced as a national flower, but no official action has been taken. We, therefore, ask for an endorsement of the joint resolutions above referred to, and that your committee be instructed to cooperate with our legislators at Washington along said lines.

We also ask the endorsement of this Society of Senate Bill No. 6227 to increase the area of the Botanical Gardens in the city of Washington. The bill on file provides for the taking in of East Seaton Park and West Seaton Park, bounded by 3rd and 6th streets, and Maine and Missouri avenues. If this bill becomes a law, we will in time have a Botanical Garden worthy of the National Capitol of the United States.

Unfair Competition or Anti-Dumping Law.

There is now before Congress a so-called unfair-competition or anti-dumping law to prohibit the sale in the United States of foreign goods at prices substantially below the prices prevailing in the country of origin. H. R. 16763—Pages 88 and 89.

In reference to the above matter, the enactment of this law would materially benefit the legitimate florist and dealer who as a rule, buys his goods at a fair market price and expects to pay for them, in as much as the bill before Congress prohibits the dumping on American markets of goods to be sold at public auction, particularly surplus bulbs and nursery stock which is annually offered in the United States. Your committee has therefore done what they could in personal interviews and have sent copies of the following letter to the members of the Finance Committee having the matter in charge.

Washington, D. C.,
July 29th, 1916.

Hon. F. M. Simmons, Chairman,
Finance Committee, U. S. Senate,
Washington, D. C.

Gentlemen:

As national representative of the Society of American Florists and Ornamental Horticulturists, I wish to endorse Title VII—"Unfair Competition," contained in the so-called "General Revenue Bill," now under consideration by your Committee, and to urge that Title VII be favorably recommended to and adopted by the Senate in its present form.

In this provision we see protection from unfair competition, of a type not generally known—where foreign producers of the various kinds of nursery stock (bulbs in particular) sell to growers in the United States on individual orders at ruling market prices, only to later "dump" into the auction houses the same class of merchandise at much lower prices. Then there arises in respect to these a competition, unfair and detrimental to our interests.

Respectfully,

WILLIAM F. GUDE,
Chairman Tariff and Legislation Committee, S. A. F. and O. H.

Committee on Wm. R. Smith Memorial
Wm. F. Gude, Chairman.

Your committee has been rather inactive the past year on account of matters pending before the National

Government on measures now under consideration, which might materially affect the form that the Memorial to the late Wm. R. Smith should take. Your committee has therefore deemed it best to go slow with the matter and ask to be continued.

We have in bank in the Munsey Trust Company, Washington, D. C., to the credit of the Wm. R. Smith Memorial fund.....\$1,778.44
Pledges, outstanding..... 625.00

REPORT OF THE SCHOOL GARDEN COMMITTEE.

By Benj. Hammond, Chairman.

The first suggestion for the American Florists to interest themselves in School Gardening was made by Mr. Robert Farquhar of Boston, at the S. A. F. convention in Washington, D. C., in August, 1892. The practical value of this work has become recognized the country over because it is the means of inculcating into the habits of youth industrial application of mind and bodily vigor, with the result of home benefit.

BENJAMIN HAMMOND

Chairman School Garden Committee.

At the National Educational Association Convention held in New York City in July last, special sessions were held by the School Garden Association of America devoted to the reports from school workers in this line. The United States Commissioner of Education, Mr. Claxton, was present, and representatives from Quebec and Ontario and from the chief centers of population in the United States. On one of the programs allusion was made to the suggestive work of the Society of American Florists and Ornamental Horticulturists. Your committee the past year has carried out the plan of sending as usual a nicely illustrated circular letter to each of the Departments of Education in the States and Territories, and to the school authorities of cities and towns wherever there is a member of the Society of American Florists located.

There is this much certain, an interest in this work locally is good business for flower and seed trade. If the idea among children is encouraged it will grow until the United States will become the nation of pretty homes.

One thing none of us should forget, and that is the value of initiative, for it is the characteristic that laid the foundation of Americanism. The florist in his home town, can with spare material set an example of petty home surroundings that no other tradesman can so well do, and these examples point the way and create a demand for flowers, seeds and shrubs. The many letters which have come to hand from these efforts relative to home gardening for children prove beyond question the general interest this work has, and it carries with it the truth—"On Earth Peace and Good Will Toward Men."

Messrs W. F. Gude, E. G. Hill, F. X. Stuppy, J. A. Peterson and George Asmus, were appointed a committee on the recommendations in the President's address.

All the proposed amendments to the Constitution and By-Laws of the Society were adopted without opposition or debate.

TUESDAY EVENING SESSION.

The evening session of Tuesday, August 15, was held at the Rice Hotel. Balloting for the meeting place for 1917 resulted in the selection of New York City in response to an impassioned invitation in silver-tongue key by John Young on behalf of the New York Florists' Club, Horticultural Society of New York and the trade and profession in general of the Metropolis. For the following year, in accordance with the provision of the new by-laws St. Louis was chosen, with the probability that the Convention will be held jointly with the National Flower Show in that city, agreeably to the sanction of the new by-laws.

THE PRESIDENT'S RECEPTION.

The President's reception was a brilliant and very enjoyable affair. The big man from San Francisco was simply resplendent and the only somewhat less portly Secretary from New York was a star of undimmed radiance. Without further individualizing we will say that the "receiving row" was a galaxy of the first magnitude. John Young paid a high compliment to Frederic R. Newbold of New York for his brilliant achievement in securing six acres in the Bronx Park for the purpose of a Convention Garden for 1916.

WEDNESDAY MORNING.

Considerable routine work was put through on Wednesday morning. Telegrams were read from the Pacific Coast Horticultural Society, Ex-President Welch and the St. Louis Florist Club, the latter expressing appreciation of the selection of their city for the 1918 meeting and promising hospitality in large chunks. A. Miller, J. A. Newsham, W. J. Baker, Jos. A. Manda and J. J. Hess were appointed judges for the Convention Garden; W. F. Gude, Jos. Heacock, F. X. Stuppy, P. A. Chopin and C. L. Baum for the trade exhibits. A vote of thanks was extended to George Asmus for his efficient work as chairman of the Flow-

er Shoe Committee and the question of compensation for that position was referred to the Executive Board. The report of the committee on President's address was deferred until Thursday.

Officers for 1917 were nominated as follows: For President, Robert C. Kerr of Houston, Texas; Vice-President, A. L. Miller, Jamaica, L. I., N. Y.; Secretary, John Young, New York; Treasurer, J. J. Hess, Omaha, Neb.; Directors, Frank X. Stuppy, St. Joseph, Mo.; W. W. Coles, Kokomo, Ind.; George W. Hess, Washington, D. C. The report of the Botanist of the society, John Dunbar, Rochester, N. Y., was read and then adjournment until Thursday morning was carried. During the afternoon an automobile ride was enjoyed by the visitors and in the evening the formal opening of the Convention Garden was in order, followed by a moving picture show at the Queen Theatre and a band concert at Sam Houston Park.

A. L. MILLER

Vice President elect, Society of American Florists.

We have in type, crowded out of this issue for lack of room, the Report of the National Flower Show Committee by Chairman George Asmus; Report of Publicity Committee by Chairman Irwin Bertermann; and a valuable paper on "Some Important New or Little Known Trees and Shrubs by John Dunbar, Botanist to the Society. These will appear in our issue of next week.

TRADE EXHIBITION.

Exhibitors in the Trade Section were the following: H. Bayersdorfer & Co., Philadelphia, florists' supplies, domestic and imported baskets, preserved flowers and foliage, etc., a very handsome outfit; Advance Company, Richmond, Ind., ventilating apparatus and greenhouse fittings; Pochmann Bros. Co., Chicago, florists store and greenhouse supplies; Kroeschell Bros. Co., Chicago, heating apparatus; Burlington Willow Ware Shops; J. A. Evans Co., Richmond, Ind., Challenge Ven-

tilators; J. A. Peterson & Sons, Cincinnati; M. Rice Co., Phila.; H. L. Doescher, New Orleans; A. L. Randall Co., Chicago; Wertheimer Bros., New York; Gullett & Sons, Lincoln, Ill.; Cottage Gardens Nursery Co., Eureka, Cal.; American Bulb Co., Chicago; C. E. Falls; Cohen & Hiller.

FLORISTS' HAIL ASSOCIATION OF AMERICA

The meeting of the Hail Association took place on Wednesday, August 16. J. J. Hess of Omaha and Anders Rasmussen of New Albany, Ind., were elected directors. The amendment to the constitution as to extra hazardous risks was adopted. Officers were not elected, there not being a sufficient number of directors present.

Summary of Secretary's Report for Year Ending Aug. 1, 1916.

The insurance on glass, effective August 1, 1916, in the Florists' Hail Association, totals an insurance upon 43,101,590 sq. ft. of glass. The number of members at date of closing this report is 1,658. The total receipts for the year ending August 1, 1916, and including last year's balance, as per treasurer's report, are \$73,780.37. The losses paid from August 1, 1915, to August 1, 1916, amount to \$55,327.74.

The total expenditures, as per treasurer's report, for the year ending August 1, 1916 are \$64,572.52.

The cash balance on hand is \$9,207.85, of which \$743.04 belongs to the reserve fund.

The reserve fund now amounts to \$38,743.04, of which \$38,000 is invested in first-class municipal bonds, and \$743.04 cash in hands of the treasurer.

The amount of interest collected on bank deposits for the year is \$426.86.

The amount of interest collected on reserve fund investments for the year is \$1,912.50.

Two thousand, three hundred and eighty-five losses have been adjusted since the organization of the F. H. A., involving a total expenditure of over \$370,000.

An equivalent of 270,913 sq. ft. of single thick glass was broken by hail during the past year, for which the association paid \$13,545.65. And an equivalent of 597,530 sq. ft. of double thick glass was broken, which cost the association \$41,827.10.

The only liabilities of the association at the close of this report are three unadjusted losses, amounting to less than \$200.

The F. H. A. has paid out more money for losses during the past year than in any previous year since its organization.

It has more glass insured than at any previous time. It has taken in more new business than in any previous year of its history.

The F. H. A. is equalizing risks by charging a greater premium upon risks that have entered the hazardous class.

It has a large reserve fund, which is rapidly growing, increasing thereby its stability.

The F. H. A. stands for a square deal, and a prompt adjustment of losses; and the officials of the organization desire to extend their thanks for the many letters of commendation which they have received from the members who approve of their methods of administration.

TEXAS STATE FLORISTS' ASSOCIATION.

The third annual convention of the Texas State Florists opened in the banquet hall of the Houston City Auditorium on Monday forenoon, August 14. The meeting was called to order by President R. C. Kerr and after invocation by Dr. Peter G. Sears an address of welcome was made by J. J. Pastoriza and E. E. Stone of Dickinson responded. Then followed the president's address which was characteristically enthusiastic, the reports of secretary-treasurer and various committees. Reports from the various city florists' clubs were made by Louis Oesch for Dallas; W. J. Baker for Fort Worth; Mrs. G. Jung for San Antonio; Chas. Alf for Austin; C. L. Brock for Houston. San Antonio was chosen for the State Convention of 1917 and Dallas for the 1916 flower show.

Mr. Kerr complimented the Texas florists on their great progress in the past two years. He urged the need of more large flower growing establishments in the state and hoped that Texas would soon grow every flower needed. State flower show, publicity campaign, credit bureau, State experimental greenhouses were all advocated and an eloquent appeal was made for whole-souled support of the S. A. F., and especially the F. T. D. section. In conclusion he said, I ask, regardless of the duties and responsibilities that fall on you, do not fail to progress. Keep moving with those about you or you will find yourself isolated and alone. Keep yourself on a mental parity with your co-workers and friends. This will make you a welcome companion.

Progress—keep moving—be modern. The pathway of life is longest and roughest to those who lag behind the procession. Life is worth living and it is worth living right up to the minute.

Officers were elected as follows: President, T. J. Wolfe, Waco; Vice-President, F. C. Suchy, San Antonio; Secretary-Treasurer, W. J. Baker; Directors, Messrs. Forrest, Stone, Hannah, Koehler, McAdams and Beck. C. L. Brock was chosen press representative and Mr. Hensel educational director.

Addresses were made by S. A. F. visitors already on the ground including President D. MacRorie, San Francisco, W. F. Gude, Washington, E. G. Hill, Richmond, Ind., George W. Hess, Washington and J. J. Hess, Omaha.

Papers were read by W. J. Baker on "Better Freight Rates for Texas Florists," Henry Greve, Dallas, on "The Importance of Membership in the S. A. F. and O. H., Prof. E. J. Kyle on "Progress Towards Securing an Experimental Range of Glass, and A. F. Koehler on "The Difficulties of Retailers with Wholesalers on Damaged Flower Shipments."

The evening session of the convention was held at a banquet on the Rice Hotel Roof Garden.

Papers were read as follows:

"The Need of More Wholesale Glass in Texas."—H. O. Hannah, Sherman; "What the Ladies are Doing for the Florists' World"—Mrs. Annie Wolfe Bregance, Waco; "The Outlook for Texas Florists for the Coming Year, with Some Suggestions on What to Expect"—Otto Lang, Dallas.

Addresses were made by visitors as follows: W. F. Gude, E. G. Hill, Mrs. Darbee, P. J. Foley and J. S. Kerr. The committee on resolutions reported, thanking the retiring officers, railroads, exhibitors, press. The president was authorized to appoint committees to carry out his recommendations, also a committee to co-operate with the American Association of Nurserymen and Society of American Florists to regulate the inspection of state and interstate shipments of nursery and florists' stock, also for the improvement of Texas state laws on the same subject.

DURING RECESS.

Westchester and Fairfield Horticultural Society.

The Sixth Annual Outing and Field Day of this Society was held Aug. 8th at Rye Beach Inn in conjunction with the members of the Tarrytown Horticultural Society. It was a decided and pleasing innovation and enabled many old friends to meet. Over 200 people sat down to the shore dinner. The "sports" programme was somewhat curtailed owing to a heavy thunder storm, however the honors were divided by the members in most cases, with the Fairfield contingent in the lead; the game of quoits went to the Tarrytown "boys." The athletic contests for ladies only were both exciting and picturesque.

P. W. POPP.

Boston Market Gardeners.

The Boston Market Gardeners' Association, 150 strong, left worries over the high cost of living and this year's crops at home last Saturday and took a day off at Pemberton. James P. Esty's selected baseball nine lined up against E. J. Purcell's choicest and trimmed them, 9 to 7. Pemberton Inn clams and lobsters were mutilated beyond repair at 1 o'clock and in the afternoon sports of various kinds were run off, including a potato race.

NEW CORPORATIONS.

Des Moines, Ia.—Pratt Greenhouse Co., capital stock, \$25,000. Incorporators, L. W. and B. E. Pratt.

Wenatchee, Wash.—Trumble Consulting Horticultural Co., capital stock, \$5,000. Incorporators, R. Edwards and M. E. Trumble.

Tampa, Fla.—Allen & Reils Seed Company, capital stock, \$10,000. Incorporators, D. C. Gillett, H. F. Reils and A. L. Allen.

Rock Island, Ill.—The L. Stapp Co., florists and growers, capital stock, \$20,000. Incorporators, L. Stapp, Minnie Stapp and E. H. Stapp.

Chicago, Ill.—American Bulb Co., 172 N. Wabash avenue, dealers in bulbs and seeds, capital stock, \$100,000. Incorporators, A. Miller, S. Seligman, Robert Newcomb, Wm. Newcorn, Albert Koehler and Benjamin Miller.

The party from New York en route to the Houston Convention were handsomely entertained by the floricultural maternity at New Orleans.

AMERICAN GLADIOLUS SOCIETY

The annual meeting of the American Gladiolus Society was held in Boston, Mass., on August 12, in the trustees' room of the Mass. Horticultural Society, with an attendance of about forty.

President Fairbanks made an interesting address, emphasizing especially the need of an overhauling of the nomenclature and classification of varieties, and the necessity of a higher tariff on imported corms in justice to the American growers.

Secretary Youell read the minutes and reported on the year's activities, incidentally chiding the members for lack of interest and effort to increase the membership list. He advocated printing an annual report. Receipts for the year were \$812.50, and balance in treasurer's hands is \$237 larger than last year.

Montague Chamberlain made a report to the effect that the new by-laws had not come up to expectations and the further revision would be desirable, especially in the matter of prize schedule classifications. This brought on a lively debate, participated in by President Fairbanks, Secretary Youell, Arthur Cowee, E. M. Smith, Montague Chamberlain, L. Merton Gage, Madison Cooper and others, as to the proper status of the amateur, so-called, in the exhibitions, the question being finally referred to a committee to define the lines between big amateurs and little amateurs and professionals. A committee to report on the proposition of a quarterly bulletin was also constituted. Designs for a society medal were shown by the president. Last year at Newport the officers were elected for two years but Mr. Fairbanks asked to be relieved now so that a more active successor might fill the president's chair. The members would not entertain the suggestion and a motion to decline the resignation of Mr. Fairbanks was unanimously carried with vociferous acclaim. So, President Fairbanks it is for another year.

The meeting was characterized by enthusiasm and a very optimistic atmosphere which promises well for the American Gladiolus Society.

THE EXHIBITION.

The seventh annual exhibition of the American Gladiolus Society opened on Friday, Aug. 11, in conjunction with the annual exhibition of the Massachusetts Horticultural Society at Horticultural Hall, Boston. It was decidedly the largest and best exhibition of gladioli ever seen in Boston. Pres. Charles E. Fairbanks, with 5000 blooms in 250 named varieties from his estate in Milton, had the largest exhibit and they were arranged very impressively. Other exhibitors included T. A. Havemeyer of New York, vice-president of the American Gladiolus Society, who had a superb display of several hundred varieties; H. E. Meader, Dover, N. H., 60 varieties; L. Merton Gage of Natick, with 75 varieties; Raymond W. Swett of

Saxonville; Charles W. Brown & Son, Ashland; Thomas Cogger of Melrose, representing C. Keur & Sons of Hillegom, Holland, who showed 200 named varieties; John Lewis Childs, Inc., Flowerfield, N. Y., 225 named varieties; J. Thomann & Sons, Rochester, N. Y.; Eugene Fischer, Jamaica Plain; Ernest M. Smith, East Hartford, Conn.; S. E. Spencer, Woburn; Madison Cooper, Calcium, N. Y.; Breck-Robinson Nursery Company, Lexington, Mass.; P. Vos Mz, represented by J. Zeestraten, Stoughton, Mass.; Metzner Floral Company, Mountain View, Santa Clara Co., California.

Taken as a whole the exhibition presented a very brilliant spectacle, the picture rivalling the rainbow. The influence of the primulinus hybrids was strongly in evidence, lighting up the collections with the luminous tints of salmon and gold which are characteristic of that species. A closer scrutiny showed the great advances made in recent years in size, form and markings of the flowers. There was, unfortunately, the marked absence of legible labeling which mars the usefulness of so many exhibitions. President Fairbanks' collections were a conspicuous object lesson in neat and readable labels and special recognition of this by the judges would not have been amiss.

Among the outstanding sensations we might mention in particular Mr. Fairbanks' lavender seedling, Julia M. Fairbanks; also T. A. Havemeyer's Muriel, which took 1st in 25 spikes of "any other color" which in color tone reminded of a fine cattleya or laelia. Mme Maumet Sully, shown by Mr. Havemeyer, white with scarlet blotch, was remarkable in the number of perfect flowers, eight or nine to a spike open at once. The Childs collections sparkled with the sunrise tints of primulinus varieties.

List of Awards.

Prizes offered by the Massachusetts Horticultural Society.

Vase of twenty-five spikes, White, one variety: 1st, Charles F. Fairbanks, Boston, Mass., with Europa; 2d, Jacob Thomann & Sons, Rochester, N. Y., with Rochester White.

Twenty-five, Red: 1st, Charles F. Fairbanks with Red Emperor; 2d, Helen A. Reardon with Liebesfeur.

Twenty-five, Crimson: 1st, John Lewis Childs, Flowerfield, L. I., with Rich Red; 2d, C. W. Brown & Son, Ashland, Mass.

Twenty-five, Pink: 1st, T. A. Havemeyer with Panama; 2d, C. F. Fairbanks, Panama.

Twenty-five, Yellow: 1st, John Lewis Childs, Sulphur King; 2d, S. E. Spencer, Woburn, Mass., Schwaben.

Twenty-five, any other color: T. A. Havemeyer, Muriel; 2d, Charles F. Fairbanks, Mary French.

Twenty-five, any Lemoinei Hybrids: 1st, T. A. Havemeyer, Mme. Mounet Sully; 2d, John Lewis Childs, Baron Hulot.

Twenty-five, any Primulinus Hybrids: 1st, C. F. Fairbanks; 2d, C. W. Brown & Son.

Largest and best collection of named varieties: 1st, John Lewis Childs; 2d, C. F. Fairbanks.

Collection of fifty named varieties: 1st, T. A. Havemeyer; 2d, John Lewis Childs.

Six spikes, White, one variety: 1st, T. A. Havemeyer, Europa; 2d, Jelle Roos, Milton, Mass., Europa.

Six spikes, Red: 1st, T. A. Havemeyer, Red Emperor; 2d, John Zeestraten, Electric.

Six spikes, Crimson: 1st, John Lewis Childs, with George Paul; 2d, Jelle Roos, Milton.

Six spikes, Pink: John Zeestraten, Panama; 2d, H. E. Meader, Dover, N. H., Myrtle.

Six spikes, Yellow: 1st, E. M. Smith, East Hartford, Conn., Schwaben; 2d, C. F. Fairbanks, Schwaben.

Six spikes, any other color: 1st, T. A. Havemeyer, Loveliness; 2d, C. F. Fairbanks, Julie M. Fairbanks.

Six spikes, any Lemoinei Hybrid: 1st, H. E. Meader, Heliotrope; 2d, T. A. Havemeyer, Duval.

Six spikes, any Primulinus Hybrid: 1st, C. W. Brown & Son; 2d, John Lewis Childs, with Concolor.

Three spikes, White: 1st, Thos. Cogger, Europa; 2d, Madison Cooper, with Mrs. L. M. Gage.

Three spikes, Red: 1st, C. F. Fairbanks; 2d, E. M. Smith.

Three spikes, Crimson: 1st, E. M. Smith; 2d, Jelle Roos, with Rajah.

Three spikes, Yellow: 1st, Madison Cooper, Yellow Bird; 2d, E. M. Smith.

Three spikes, any other color: 1st, John Lewis Childs; 2d, E. M. Smith, Myrtle.

Twelve vases, twelve named varieties: 1st, Iristhorpe Farm; 2d, H. E. Meader.

Twenty-five spikes, artistically arranged: 1st, Jacob Thomann & Sons, Rochester, N. Y.; 2d, Eugene Fischer.

Gold Medal: C. F. Fairbanks, for advancement in the cultivation and exhibition of the Gladiolus.

Honorable Mention: John Lewis Childs, Gladiolus Evelyn Kirtland; C. W. Brown & Son, vase of Gladiolus Evaline.

Vote of Thanks: Blue Hill Nurseries, Gladiolus primulinus hybrids; R. & J. Farquhar & Co., evergreen decorative plants.

Gratuities to Brookland Gardens, Thomas Cogger, L. Merton Gage, C. W. Brown and Raymond W. Swett for displays of gladioli; J. K. Alexander for display of dahlias, Blue Hill Nurseries for display of hardy herbaceous flowers, Mrs. E. M. Gill for hardy flowers, T. C. Thurlow's Sons, phloxes.

Charles F. Fairbanks special prizes for Seedling Gladiolus, one spike: 1st, John Lewis Childs, Seedling No. 3; 2d, T. A. Havemeyer.

W. Atlee Burpee & Co. special for best collection 10 varieties, 6 spikes each: Jelle Roos, Milton, Mass.

G. D. Black special for twelve spikes Golden King: 1st, S. E. Spencer, Woburn, Mass.; 2d, E. M. Smith, East Hartford, Conn.

H. E. Meader special for best new yellow Primulinus Hybrid seedling: C. W. Brown, Ashland, Mass.

Fottler, Fiske, Rawson Co. special for five varieties, 3 spikes each: 1st, E. M. Smith; 2d, H. E. Meader; 3d, Charles F. Fairbanks.

A. E. Kunder special for best collection Kunder's varieties: Gold medal to C. W. Brown & Son.

Munsell & Harvey special for 6 spikes best Red, to Madison Cooper, with C. M. Clifford, dark wine.

Hitchings & Co. special for the most artistically arranged basket or hamper (all seedlings): Silver cup, to Jacob Thomann & Sons.

A. H. Austin & Co. special for best 6 spikes, Mauve: Madison Cooper. For best 6 spikes Rose Wells: John Lewis Childs.

P. Hopman & Sons special for best 25 spikes Pink Perfection: S. E. Spencer, Woburn, Mass.

T. A. Havemeyer special for 3 spikes any other color: Mrs. E. R. Pierce, Wellesley Farms, with seedling Florence, unique deep magenta with white blotch.

Certificate to Eugene N. Fischer for Lemoinei seedling Henry C. Goehl, white flushed pink, with carmine blotch.

In the smaller hall there was a fine fruit and vegetable annex, in which a creditable display of hothouse grapes were staged by Weld Gardens, gard. Duncan Finlayson. In addition to the regular prizes for vegetables and fruit the Mass. Horticultural Society gave the following gratuities:

Jennison's Floral Gardens, collection of seedling Blueberries; Hillcrest Farm, Japanese Wineberry; Jennison's Floral Gardens, 1st Earl Everbearing Strawberry; J. W. Brown & Son, collection of berries.

CLUBS AND SOCIETIES

CANADIAN HORTICULTURAL ASSOCIATION.

The 19th annual convention of the Canadian Horticultural Association opened at Berlin, Ont., Canada, Tuesday afternoon, August 8, with about 160 delegates in attendance. Mayor Hett of Berlin warmly welcomed the visitors to Berlin, and the response was delivered by E. B. Hamilton of London, Ont. President F. W. Adams, Toronto, Ont., then reviewed the progress of horticulture in the Dominion during the present year to date. The reports of the Secretary-Treasurer and the Tariff Committee then were presented by J. Luck, Montreal, P. Q., and E. I. Mepstead, Ottawa, Ont. E. J. Hayward of Montreal addressed the convention on "Commercial Ferns." On Tuesday afternoon the visitors were taken in automobiles through Berlin and the adjoining town of Waterloo. In the evening George Baldwin of Toronto gave an illustrated lecture on "Success With a Home Garden," and Harry Tattle of Toronto spoke on "Commercial Culture of Peonies and Dahlias."

The convention concluded on Thursday noon, with the election of officers and the selection of Montreal, Que., for next year's convention. The new officers are: President, James Fraser, Prescott, Ont.; first vice-president, E. J. Hayward, Montreal; second vice-president, F. Dicks, London, Ont.; secretary-treasurer, J. Luck, Montreal; executive committee, C. H. Janzen, Berlin; E. F. Collins, Toronto; F. Wise, Peterborough, Ont.; E. B. Hamilton, London; Luke Williams, Ottawa; George Douglas, Toronto; William Hunt and C. A. Smith, Berlin. Just before the convention adjourned papers were read by H. Dille-muth, Toronto, on "Problems of the Retailer," and by J. Luck, Montreal, on "Outdoor Roses." Thursday afternoon following the closing sessions of the annual meeting the delegates visited the Ontario Agricultural College in Guelph, Ont.

WESTCHESTER AND FAIRFIELD HORTICULTURAL SOCIETY.

The monthly session of this society was held in Greenwich, Ct., Aug. 11th. A feature was the display of out-door flowers, arranged for effect by assistant gardeners. There were four contestants. 1st prize was awarded to James Lough; 2nd, Andrew Gale. Wm. Friend and Alex. Clarkson were highly commended. Vote of thanks was given to Thos. Ryan for "Superb" strawberries, Arthur Pederson for seedling tomatoes and beans. P. W. Popp received a certificate of merit for gladioli. A committee was appointed to draft resolutions of sympathy on the death of Thos. Robinson. The next meeting will be held Sept. 8th.

P. W. POPP.

COMING EXHIBITIONS.

August 24-25.—Lewiston, (Me.) Annual Flower Show, Gardeners Union, Lewiston City Hall.

August 3, Oyster Bay, L. I., N. Y.—Dahlia Show, Oyster Bay Horticultural Society.

August 11-12-13, Boston.—American Gladiolus Society, Horticultural Hall.

August 24, Worcester, Mass.—Gladiolus Exhibition.

Sept. 2-9, Cleveland, Ohio.—Industrial Exhibition and Fair.

Syracuse, N. Y., Sept. 11-16.—New York State Fair.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The monthly meeting of the Nassau County Horticultural Society was held in Glen Cove, N. Y., Wednesday evening, Aug. 9. The schedule of the coming dahlia show was read by Robert Jones, chairman of the committee. It contains 63 classes, covering exhibits of dahlias, roses, etc., also a class for dinner table decoration. With only one or two exceptions the classes are open and all exhibitors will be welcomed. Secretary Gibson is still receiving many offers of prizes for our chrysanthemum show and the outlook is most favorable for a very successful exhibition.

John Ingraham of Oyster Bay staged a gorgeous collection of gladioli for which he was awarded a certificate of culture. Harry Goodband won 1st prize for gladioli, and asters. John W. Everitt won 1st for tomatoes. By request Mr. Ingraham gave a talk on the Gladiolus. He told of his method of culture and varieties most suitable for growing conditions on Long Island.

JAMES MCCARTHY, Cor. Sec'y.

ST. LOUIS FLORIST CLUB.

The meeting of the Florist Club took place August 11th at the home of J. D. Davis in St. Louis County, on invitation of Stephen Beer, gardener for Mr. Davis. President Bourdet opened the meeting with 50 members present. All the new changes in the by-laws were carried by a full vote. The election of officers resulted as follows: President, Jules Bourdet for a third term; A. Hummert, vice-president; J. J. Windler, secretary; W. C. Smith, treasurer; Frank Windler, trustee. An invitation to attend the Growers' Picnic was extended by W. A. Rowe and the club offered a \$5 prize. A vote of thanks was extended Mr. Beer. Next meeting, Sept. 14th, on the grounds of Sanders' nursery.

The schedule of the eighty-fourth annual exhibition of the New Haven County Horticultural Society has been issued. The show will be held in Republican Hall, New Haven, Conn., on Wednesday and Thursday, Sept. 13-14, 1916. For further particulars apply to the Secretary, W. C. McIntosh, 925 Howard avenue, New Haven, Conn.

MORRIS COUNTY GARDENERS' AND FLORISTS' SOCIETY.

The Twenty-first Annual Flower Show of the Morris County Gardeners' and Florists' Society will be held on Oct. 26-27, 1916, in Assembly Hall, Madison, N. J. The same Flower Show Committee will manage the exhibition that managed our first small affair twenty-one years ago, viz: Arthur Herrington, Wm. H. Duckham and Chas. H. Totty. A special effort will be made to make this show stand out conspicuously, for, as a society, we will have just "come of age."

EDWARD REAGAN, Sec'y.

CLUB AND SOCIETY NOTES.

The Horticultural Society of New York will hold a gladiolus exhibition in the Museum Building, New York Botanical Garden, Bronx Park, New York City, in co-operation with The Garden, on August 19th and 20th, 1916. The exhibition will be open from 2 to 5 on the first day, and from 10 to 5 on the second day.

A meeting of the Board of Directors of the Horticultural Society of New York, will be held in the Museum, New York Botanical Garden, at 2.30 o'clock on Saturday. A meeting of the society will take place in the Lecture Hall, at 3.30 o'clock, followed by a public lecture at 4 o'clock, by Dr. P. A. Rydberg on "Among the Canyons and Deserts of Southeastern Utah." The lecture will be illustrated with lantern slides.

The Cleveland O., Industrial Fair and Exposition opens at Edgewater Park on September 2, and will continue for one week. The Flower Show section is well provided for in a very liberal premium list with open classes and classes limited to private gardeners. Special classes for table decorations, baskets, etc., offer opportunity for artistic work with gladioli, asters and dahlias particularly. This will be the first open air fall flower show ever held in Cleveland.

The 13th annual meeting of the Alabama State Horticultural Society, which is expected to be one of the best in the history of the organization, will be held in the School Auditorium, at Brewton, Ala., August 30th and 31st. The meeting will be of great interest to all interested in any phase of horticulture. A number of excellent speakers will be present to give practical talks. Exhibits of flowers, fruits and vegetables will be shown in connection with the meeting, and premiums will be awarded for the best products. For full information address L. H. Reed, Deer Park, Ala., chairman of the Exhibit Committee.

J. C. C. PRICE, Auburn, Ala.
Secretary-Treasurer.

Federal Seed Import Law Amended.

The Federal Seed Import Act of August 24th, 1912, was amended by the approval of the President on August 11th of the Agricultural appropriation bill, as follows:

Seeds of *vetch* and *ryegrass* are added to the list of seeds contained in the original Seed Import Law, and the following new provisions are added, "and, hereafter, when any kind or variety or mixture of the seeds subject to the provisions of said Act of August twenty-fourth, nineteen hundred and twelve, as hereby amended, shall contain less than sixty-five per centum of live, pure seed as distinguished from dead seed, chaff, dirt, other seeds, or foreign matter, such seeds or mixture thereof shall be deemed unfit for seeding purposes within the meaning of said Act approved August twenty-fourth, nineteen hundred and twelve, and the importation of such seed or mixture thereof is prohibited: Provided, however, That seed of Kentucky blue grass and seed of Canada blue grass shall not be considered unfit for seeding purposes when they contain fifty per centum or more of live pure seed."

This amendment, of so great interest to Seedsmen and the purchasers of seeds, was suddenly offered by the Senate Committee on Agriculture and Forestry to the Senate while considering the Agricultural appropriation bill. The Senate agricultural committee adopted this amendment without notice or the granting of any hearing to those interested in this important matter. There was no opportunity given to object to this amendment in the Senate except by raising the point of order against the provision as new legislation, and, of course, such proceeding was impossible. Prompt and strenuous opposition to this inconsiderate action of the Senate was made to the conferees of the Senate and House, but these eight gentlemen decided the case.

Crop Notes by Bureau of Estimates.

U. S. Dept. of Agriculture.

NEW YORK.—Considerable complaint is voiced by growers concerning the late and wet spring which affected various truck crops. While the northern and western sections of the State have been without much rain, the southern and eastern sections have been nearly flooded. Cabbage transplanting was from two to three weeks

late, but it is understood the new plants took root well and appear to be in fair condition. Onions in Orange County suffered from heavy rains the latter part of the past month. Much complaint is heard concerning the lack of available labor to cultivate the various crops. Much of the labor usually employed in the cultivation of onions and cabbages, etc., has been attracted by high wages to the industrial centers and the crops have suffered thereby.

INDIANA.—Celery has suffered in some sections a little from blight. The onion crop has improved over last month and harvesting will probably begin about August 15, 1916. In general, conditions have been good during July.

MICHIGAN.—Complaints of severe drouth have been received from correspondents in this State. The cabbage worm and onion maggot are mentioned by some correspondents.

WISCONSIN.—A severe drouth is seriously affecting all truck in Wisconsin, especially the cabbage crop. Transplantings are evidently suffering from lack of moisture and plentiful rains would help much in assisting the new plants to take root and attain maturity before frost. Transplanting was very much delayed this season.

OHIO.—Hot and dry weather is complained of during the past month. Onions have not improved during the month, owing to weather conditions and lack of labor for the necessary cultivation. Insects are complained of to some extent in the cabbage and onion sections.

Low Germination of Crimson Clover Seed.

Washington, D. C.—Samples of lots of crimson clover seed now on the market tested recently by the U. S. Department of Agriculture usually have contained about one-third of dead seed, and in many samples more than two-thirds of the seed was dead. It is important, therefore, that planters know the quality of the crimson clover seed they intend to sow.

Every lot of seed should be tested for germination, and then seeded heavily enough to insure getting a stand. If the present supply of seed of low germination is sowed without testing, and at a usual rate of seeding, poor stands and failures will follow even under favorable weather conditions.

Important Customs Ruling.

In a hearing before the Board of General Appraisers in New York last week, William Larzelere & Co., Philadelphia, lost in a contention dealing with the classification of orchids. They were taxed at 25 per cent. under the specific provision for such flowers. The importers claimed free entry under that part of the same paragraph referring to all mature mother flowering bulbs imported exclusively for propagating purposes. It appeared that the orchids

were imported for a woman who testified that she did not deal in flowers, but imported them in this case solely for purposes of cultivation. As they were for use in a private greenhouse the board decided the orchids did not come under the free list provision.

One Week's Imports.

Imports at the port of New York of horticultural material, for the week ending Aug. 14th, were recorded as follows:

Bulbs—England, \$311.
Plants—Costa Rica, \$82; Brazil, \$368; Colombia, \$3,146; Venezuela, \$320.
Red Clover Seed—France, \$16,600.
Clover Seed—England, \$3,701.
Grass Seed—England, \$6,234.
Other Seeds—France, \$259; Netherlands, \$67; England, \$915; Argentine, \$2,984; British India, \$3,687; Japan, \$3,873; Morocco, \$1,029.
Nitrate of potash—British India, \$25,832.
Nitrate of soda—Chile, \$74,867.
Other fertilizers—England, \$680; Argentine, \$2,911.

Notes.

Lake Forest, Ill.—George D. Reid has been appointed manager of the branch seed store of D. D. P. Roy, Chicago.

Chicago, Ill.—James Fisher has been appointed western representative of Carter's Tested Seeds, with headquarters at 180 North Dearborn street, Chicago.

In the report by Consul General S. Listoe to the U. S. Department of Commerce it is shown that the value of exports of bulbs and roots from Rotterdam to the United States in the year 1914 amounted to \$1,251,138; in 1915, \$1,272,968. Nursery stock in 1914 amounted to \$647,996; in 1915, \$670,068. The report states further that owing to the difficulties in exporting to the belligerent countries and the diminished demand as a result of the war, the growers were obliged to dispose of their bulbs and flower roots in the United States at lower prices than heretofore, so that the actual quantity of reports represented in the figures exceeded considerably that of 1914.

CATALOGUES RECEIVED.

NEWS NOTES.

Stoneham, Mass.—Christine C. Dre-wett, of Roslindale, has purchased the Wright street greenhouses.

St. Peter, Minn.—A. J. Loegering has purchased Emil Samuelson's greenhouses and 28 acres of land adjoining for nursery purposes.

Summit, N. J.—The Colonial Flower Shop which has been successfully conducted for the past seven years by William Death has been sold to Harry O. May who has decided to branch out into the retail business.

Fall River, Mass.—Saturday, August 5, was opening day of Warburton's new flower shop in the Hotel Wilbur building, North Main street. Many friends and patrons thronged the attractive store all day. Mr. Warburton has fitted up with all modern appliances and the lighting effect is greatly enhanced by the white and gold design of finish. The display windows are finely planned for the show of plants. Souvenirs of asters and rosebuds were freely distributed to the visitors.

Little Boy Blue, come blow your horn,
Or people won't know that you ever were born;
For you'll be overlooked, say the ones who are wise,
Unless you get busy and advertise.
—Boston Post.

NEWS ITEMS FROM EVERYWHERE

CHICAGO.

Mrs. A. L. Vaughan and daughter will spend several weeks on the Pacific coast.

Jas. G. Hancock and family spent a very quiet week resting in a cottage at Deer Park, Ill.

Wm. T. Duntermann, of Bensonville, who was so seriously injured at a fire several weeks ago, is said to be on the way to recovery.

Nelda Wolf, of Zech & Mann's, has returned from a vacation and is again presiding over the books of which she has had charge for many years.

Miss Gertrude Lewis is spending a month in Colorado. Miss Lewis, who is one of the most artistic flower workers in the trade, has been with J. Mangel for a number of years.

Two large wreaths, the gift of Peter Reinberg, were placed on the monument commemorating the Fort Dearborn massacre which occurred 104 years ago, at the exercises August 15.

The large rockery on the grounds at Frank Oechslein's new residence is nearly completed. The shrubbery which forms such a part of the effect will take time to be at its best but is already attractive.

The death of the noted surgeon, Dr. John Murphy, Aug. 11th, almost caused a panic in the Chicago flower market. In spite of the newspaper notice to omit flowers there were six autos filled

with them, many of which were carried to Mercy Hospital, where he had spent so much of his time.

One of the most attractive windows in the downtown district now is that of J. Mangel, the Palmer House florist. As much space as possible is given to water, which bubbles and flows among the plants and water lilies. The conservatory, just remodeled, also has much floor space devoted to water, and there are miniature rockeries and islands among which live ducks paddle about.

The Geo. Wienhoeber store at 41 S. Wabash avenue is being entirely remodelled, and the rear partition being removed, throwing this store and the one around the corner on Monroe street into one large store. New tile floors have been laid. The walls will be of two-tone gray panels and the lower part covered with mirrors. The new main floor office is in mahogany and a private office is on the balcony. The store when completed has the advantages of a corner without being on one.

August Poehlmann returned Sunday night from a trip with his family to Delevan Lake, Wis. At Morton Grove everything is in splendid late summer condition and the question of the advisability of continuing the culture of the American Beauty rose never enters here. They have been cutting from the new stock for several weeks and

the quality of the Beauties is excellent. In the carnation range, when completely filled there will be something like 200,000 plants. It will be of interest to some to know how this large number is proportioned. In white, of Matchless there are 32,000, White Perfection 50,000, White Enchantress 5,000 and White Wonder 16,000. Thirty-two thousand red are divided evenly between Beacon and Champion and another 32,000 are of Alice and still another of Enchantress. Tony Gabel, in charge of the carnations, says the effect of the early wet season was quite overcome by the hot July and plants are in very fine condition.

Poehlmann Bros. Co. cut their first Golden Glow chrysanthemums this week. Their stock for cutting numbers 80,000 plants. T. Conlan, who is in charge of the plant range which now includes 150,000 sq. ft. of glass, says the summer has not been the best for out-of-door plants but those under glass, as pandanus, crotons, ferns, etc., are looking exceptionally well. A lath house 35 x 300 ft. is filled with araucarias. The palm houses are under the special care of H. M. Oeser and contain 75,000 plants. The establishment altogether includes about 2,000,000 sq. ft. of glass. There are many things to be learned in any large place and Poehlmann Bros. are generous in giving out information they have gained by years of experiment and often at considerable cost.

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

PITTSBURGH.

The members of the Florists' Club of Pittsburgh and the Horticultural Society of Western Penn. were entertained on Tuesday at the E. C. Ludwig farm, near Mars, Pa.

Miss Emma B. Maxwell and sister of Wilkesburg left last Saturday, for a month at Van Buren Point, Dunkirk, N. Y. John McClements returned last Monday from a several days' business trip in Cleveland, O. Edward L. Weaver, a salesman for Randolph & McClements, returned at the same time from a two weeks' camping trip. Accompanied by Mrs. Marshall, Geo. W. Marshall of the McCallum Co., is spending a fortnight at Geneva-on-the-Lake (Erie), Ohio. Edward Ashcraft has returned from his vacation, which was spent in Detroit, Michigan and Windsor, Canada.

WASHINGTON, D. C.

The Senate Finance Committee has agreed to knock out the provisions in the present war emergency revenue act providing for the payment of a stamp tax upon express and freight receipts and telephone and telegraph messages where the cost thereof exceeds 15 cents.

Mrs. J. R. Freeman is about to retire from the flower business and signs are appearing in the window of the store offering the establishment for rent. The greenhouses will also be rented. It is said that Louis Freeman, one of her sons who has been aiding in the carrying on of the business, and Harry Payne will go into business somewhere in the immediate neighborhood shortly. Mr. Payne is manager of the store.

Philadelphia, Pa.—W. Atlee Burpee, Jr., is to be married on November 1, to Miss Jeannetta D. Lee of Philadelphia.

Cincinnati—Jos. Enneking, manager of Max Rudolph's place is receiving the sympathy of friends in his bereavement over the death of his mother, Mrs. Frances Enneking.

BOSTON.

During the heavy wind and hail storm on Tuesday, August 8, one of the greenhouses owned by Peter Boll at Wakefield was demolished. The house was 12 by 105 ft. and filled with asparagus. Every pane of glass was smashed and the frame work raised

from its foundation. Mr. Boll lost two large, heavily-laden apple trees. One was torn up by the roots and the other broken entirely off. Several other trees in the neighborhood were damaged. About 50 panes of glass were broken in the greenhouses of Charles C. Ball, North avenue.

Florist Telegraph and Mail Order Service

Will be stronger and better as soon as every good reliable Retailer fills an out of town order the same way as he would fill an order **FOR THE BEST PATRON OF HIS SHOP.**

In order to give your Retail Florist correspondent a fair chance to fill this order according to your wishes give him the **FULL AMOUNT FOR WHICH YOU HAVE TAKEN THE ORDER.**

We have sent a great many orders to a good many different cities, also received many orders and comparatively few complaints have come to us where **A MEMBER OF THE FLORISTS' TELEGRAPH DELIVERY** filled the order. I can also safely state that in most cases we received our money very promptly from F. T. D. Members and we also have seen to it that our bills were paid within thirty days to Retailer filling orders for us.

Our annual business of transferring and receiving orders from and to other Retail Florists amounts to more than \$5,000. We are always sure to make 20 per cent on all orders we send other Retailers to fill, yet we are never so sure of making 20 per cent on orders we fill here as the amount telegraphed to us is sometimes not enough to carry out the order, like we must to uphold our firm's reputation.

THE L. BEMB FLORAL CO.

Albert Pochelon Proprietor, Detroit, Mich.

A GLADIOLUS FETE.

The opening of "Cedar Acres," the beautiful estate and gladiolus farm of Mr. and Mrs. B. Hammond Tracy, at Wenham, Mass., for charitable purposes, as announced for Wednesday, August 9, created much interest in society circles along the North Shore. Unfortunately the rains descended on Wednesday as they had done during the greater part of the past weeks and it became necessary to postpone the event until Thursday, when, although it still was showery, the occasion was eminently successful and a substantial sum of money, resulting from gate receipts and the sale of flowers, was added to the fund for the American Ambulance Hospital at Neuilly, France.

The gladiolus farms at Cedar Acres comprise 27 acres in one piece, 15 acres in another and 2½ acres in another. All the leading gladiolus novelties and popular varieties are seen here in vast plantations and when in the height of their blooming the landscape is a veritable sea of flaming color. Of the variety Halley alone, there are one million plants this season. A violent electric storm and cloudburst three days previous to the fete had beaten down the spikes and crushed the flowers in the soil but still there was a grand array of cut blooms in the big concrete storehouse, arranged with the cleverness and taste which Mrs. Tracy has demonstrated wherever she has placed these rather difficult flowers on exhibition. There were splendid combinations of harmonizing and contrasting tones that compelled admiration. While many of the va-

rieties on display were the outstanding favorites of present day gladiolusdom yet among the most noticeable ones were many seedlings of which Mr. Tracy has obtained control and which are really sensational in their qualities of substance, form and color. One only we shall mention here, a deep velvet red flower with a black throat, closely resembling an enormous fancy pelargonium.

In the fields, the widely varying character and habit of the different varieties was distinctly in evidence after the heavy rains. Halley, unrivalled in its class as a cut flower, was prone in the mud everywhere, while Klondyke stood up with foliage and flower spikes as rigid as if made of steel, while Princes with its yucca-like foliage and stocky spikes of amaryllis-like flowers seemed the ideal bedder.

Cedar Acres is 23 miles from Boston and visitors always receive a hospitable welcome.

THE NEW "RAINBOW" FREESIAS.

Since some parties feel a little hesitancy about investing in the Rainbow Freesias, seemingly scared by their cost, we addressed the grower for further particulars and in reply we can report as follows:

These freesias have been hybridized for the last seven years. The result has been a strain far superior to any imported stock. Reproduction of fixed shades being uncertain, they can be offered safely only in the mixture of sundry neutral tints in lavender, old gold, yellow, and pinkish, all blending very harmoniously, and giving even an

orchidlike effect. This will surely be appreciated by a discriminating better class trade; and it should be the freesia to be grown by those who run store and greenhouses. Once introduced, they will be permanent additions to the better-class store cutflower trade. Too expensive? Not at all when you will obtain, as has been done in the past, with their branching habit two to four sprays from the main shoot, and larger bulbs producing repeatedly two and more flowering spikes to the bulb. The old freesia seldom produces more than one flower spike; thus at \$10 per 1000 for these and \$40 per 1,000 for the Rainbows, the flowers cost about alike. All it takes is a little confidence and courage to help introduce a new acquisition of merit. When more than 30 years ago the first freesias from the cape were consigned to our firm, they sold at \$40 per 1,000, and proved a paying success. They were called at the time African lily of the valley. Many a dollar has been since then made on freesias by many growers.

WINIFRED ROELKER.

Niagara Falls, Ont.—John Dobbie, florist, of Victoria avenue, has not heard any word from his son, Private Gordon Dobbie, who three weeks ago was reported among the missing in the European war at the front in France. Young Dobbie had been on the firing line since the early part of the conflict. When last seen during the Ypres battle Gordon was assisting a comrade, and it is feared that he has been killed, as he has not been reported among the list of Canadian prisoners.

Flower Market Reports

With the exception of **BOSTON** gladioli, flowers may really be called scarce in this market. Some dealers are not disposed to admit that there are too many gladioli, but the numerous jars of this flower standing around on the tables in the wholesale marts are mute evidence to the fact. It is equally true, however, that fine spikes of the greenhouse brand of some of the most desirable varieties sell readily at good prices while the general run of outdoor stock remains unsold. Asters are poor and few. There will soon be a good supply of the later flowering and better sorts. Lily of the valley is very scarce. Roses are selling for prices as good as in winter for corresponding quality and there are none too many of them. Business is considered good for the season.

The past week has seen **BUFFALO** a scarcity on flowers.

There has been scarcely enough stock to take care of the trade. The severe hot weather has burned up the early aster crops and what few are coming in are of poor quality. The gladiolus is in about the same stage. Good local stock is selling at sight. Carnations are small and poor and the hot weather has had a bad effect on lilies. Roses are small and there are not many to be had. Lily of the valley is not plentiful.

Very unusual summer **CHICAGO** conditions still prevail.

Instead of the usual lethargy, business is good and the grower who has anything to offer now can get good returns. Such is the demand, as compared with the limited supply of good stock, that buyers have to be on the alert to get their share. The poorer stock, like the other poor, is always with us, but this is limited to a fourth of the usual mid-summer supply. American Beauties, long so hard to get, are now coming from the new plants, but the number cut is still small. Asters, the standby of late summer, are to be had in several grades, but few being first-class. New carnations, many cut in the field, are selling this year because their old rival, the aster, is not up to average. Roses of all kinds are in fairly good supply and quality not bad for the season. Gladioli are most welcome at this time and quality is good. There are plenty of lilies. Miscellaneous outdoor flowers are almost absent from the counters. There is plenty of good green.

Last week's receipts **CINCINNATI** were fair while the demand was steady and strong. This week's receipts are running heavier. The supply of good roses is very small. Lilies are in a heavy supply and meet with a good market. Gladioli are plentiful. The aster supply is only fair but should be heavy again before the end of this week. Hardy hydrangea sells pretty well.

EASTER LILIES

A flower we can recommend for hot weather. In quantity with us, splendid quality, shipped either in tight buds or open flowers.

\$1.50 per Dozen
\$8.00 to \$10.00 per 100

Field grown Carnation Plants, all varieties; extra well grown plants. For complete list see classified in this issue.

Any one of our recent **NEW YORK** weekly reports would fit all right for the present week. There is no change in the situation, which continues with scarcely a ripple to stir the placid surface of the wholesale district. Never has there been a quieter August for the florist trade of New York. Stock coming in is not heavy but more than sufficient for all possible needs. Gladioli are a burden, many of them of the old types that have been entirely supplanted in the esteem of the buying trade. These, with asters and dahlias "rule the roost."

There has been **PHILADELPHIA** a little more activity in the flower market here this week. Good stock is rather on the scarce side. Gladioli are plentiful at present and of fine quality. They are easily the leading feature of the market. Asters are also plentiful but the good ones are scarce. There are signs that a few more days will make a change for the

better in the aster situation as some of the finer mid-season varieties have commenced. Roses are in rather short supply especially in the higher grades. New crop Beauties are in moderate evidence. Jonkeer, Russell and Sunburst show up about as well as any of them. Plenty of splendid lilies. Cattleyas very scarce; not nearly enough to fill orders. Hydrangea heads and early cosmos have made their appearance and are meeting with moderate demand.

The past ten days, **PITTSBURGH** which have been marked by ideal weather conditions with just a suggestion of autumn in the air, have not as yet given any material change to floral conditions. Owing to the recent protracted hot weather, there are no good asters and practically no small flowers. White roses are particularly scarce, as also are lilies. There are no carnations to speak of, the few coming in being small and inferior in every respect. Sweet peas, too, are just about as scarce and inferior. Good gladioli are plentiful, however.

Flower Market Reports

(Continued from page 1)

Wholesale market is in **ST. LOUIS** better condition than for some time. Showers have helped greatly the outdoor stock which was nearly all burned out. Prices are not high and quality is poor. Gladioli are much in evidence just now. Roses are in fair flower but short in stem. Lily of the valley holds well, also lilies. Hydrangeas are in demand.

WASHINGTON Business during the past week has been comparatively satisfactory considering the season of the year. The bulk of the sales are on gladioli which are flooding the market. It is practically impossible to get high-grade roses and carnations and orders for these are turned down. Dahlias are improving in quality. Asters are more plentiful but are practically worthless.

Dear Sir: It will be a decided advantage
as regards prices and quality to place your
order with us.

Soliciting your order through this ad
cuts down the overhead selling expenses
and you positively get lower prices and
better quality. Our terms are liberal and
are a guarantee that you get a square
deal, all bulbs guaranteed true to name or
money refunded.

Write us and upon request we will mail
you our booklet giving prices f. o. b. New
York or Chicago, and we also cheerfully
furnish you with any information that
may be desired. Those of our friends who
will mail us a list of their requirements
will find it has paid them to do so.

Awaiting to hear from you at your pleas-
ure, we remain,
Yours very truly,

In writing to Advertisers kindly mention Horticulture

THE WHITE PINE BLISTER RUST.

Its present status in Massachusetts from the Massachusetts Forestry Association.

With the passage of the Agricultural Appropriation Bill by Congress, thirty thousand dollars becomes immediately available for use by the U. S. Department of Agriculture for the eradication of the White Pine Blister Rust in this country. Since Massachusetts has the worst infection of the Rust a large part of this money will undoubtedly be spent here.

The State Legislature appropriated \$10,000 for this work this year and with the co-operation of the Federal Government it is believed that considerable headway can be made during the remainder of this season toward running down all of the infected areas and in eradicating the diseased plants.

This disease has made the growing of our white pine impracticable in parts of Europe and unless we succeed at once in eradicating it here, we are in serious danger of losing our most valuable tree.

The Massachusetts Forestry Association, 4 Joy street, Boston, will furnish bulletins showing colored pictures of the rust free, and the citizens are asked to secure these bulletins and to inspect their own pines and currant and gooseberry bushes. The disease has two hosts, the white pine and the currants and gooseberries. It occurs on the smooth bark of the former and on the leaves of the latter. The currants and gooseberries are not affected by the Rust but they serve as a medium of spread to the pines.

Any suspicious specimens of either the pine or currants or gooseberries should be carefully packed and sent to Dr. H. T. Fernald, State Nursery Inspector, Amherst, Mass.

The owners of pines and currants or gooseberries are earnestly requested to co-operate in this respect. You may help in this way to locate any infection which has been missed by the authorities.

Now is the time to act if we are to save the white pines.

IMP. SOAP SPRAY

Is a scientifically prepared compound that is highly efficient for ALL insect pests. Why bother with several sprays when this will answer every purpose throughout the year?

LOOK FOR THE IVY LEAF TRADE MARK.

FREAKISH FACTS AND FACKLESS FREAKS.

Dalton, Aug. 10. Bees happen to have a zealously maintained reputation as prohibitionists, and therefore the bee-keepers of Berkshire County who attended the annual field day of the County Association at the home of former Senator Winthrop Murray Crane today, dared not refresh themselves with anything stronger than water, lemonade and coffee. Bees have a habit of stinging anyone with a liquorish atmosphere, and the bee-keepers wanted to inspect the apiaries of Mr. Crane and other Dalton bee-lovers.

How would you like to be able to raise fruit right in your own house?

Well such is the possibility.

W. H. Bach has already produced one tree only a foot high, yet it has produced full-grown fruit. He says that indoor fruit trees, to supply the needs of the family table, are a possibility of the future.

Mr. Bach should know, for here are a few of the things that he has brought forth: Seedless lemon, resembling an orange, a monster olive, 1½ inches in diameter, a peach that ripens in October and a lime with a loose skin.

—Boston Post.

John Nolen, city planner, has been called on to help Akron, Ohio. A municipal forest of rubber trees has been suggested.

"A wealth of floral tributes," including one from the mayor, was seen at the funeral of a well-known citizen whose family had publicly asked that no flowers be sent.

Considerable discussion has risen at police headquarters over the species of plant that is growing in front of the superintendent's office. There was a tree there originally planted by Dr. Dunn, the police surgeon; then another plant was put in after the tree was cut down, at least that is the way it was at first reported. It was at first stated that this new plant was a century plant and would never grow high enough to shade the windows; then common report had it that the plant was a tomato plant. Dr. Dunn finally investigated and found that the new plant was merely a new shoot growing out of the roots of the tree which he had planted there, and which had been cut down.

—Boston Traveler.

The Superb new rose, Lomita, a yellow Cherokee more vigorous than other Cherokees. In five gallon cans, \$1.00; in one gallon cans, 50 cents.

—Advt. in a Contemporary.

Pittsfield, Mass.—Snow and frost visited the Berkshires on Aug. 13. The snow was on top of Greylock Mountain and four Pittsfield persons were caught in a veritable blizzard on the mountain top. Some of them suffered severely from the cold. The snow fell for about 10 minutes in the wake of a gale from the northwest. In Lee on Sunday night there was a heavy frost, the mercury going down to 32 degrees.

HENRY A. DREER, Seeds, Plants, Bulbs, and Supplies, 714 Chestnut Street, Philadelphia, Pa.**MASSACHUSETTS AGRICULTURAL COLLEGE.**

Professor J. G. Graham of Massachusetts Agricultural Colleges announces that in response to inquiries that have come in from time to time a one-year course in Poultry Husbandry has been prepared which it is planned to give in the coming year at Amherst. This will meet the needs of a class of people that the department has not been able to take care of heretofore.

This course is designed for graduates of the agricultural vocational schools and others who wish to take a truly vocational course and can spend only one year at college. This course is limited to 16 students the first year and begins September 20, 1916, ending June 23, 1917.

Full details of the courses will be furnished on application to Prof. Graham.

WE GUARANTEE

Metropolitan Boilers to do their Work
Consuming Less Fuel than any Other Boiler

Because of their proven scientifically perfect construction, Metropolitan Patented Boilers will heat a given amount of water quicker, with less fuel, and less attention than any other boilers on the market.

The remarkable heating efficiency and quick steaming qualities of these boilers are due to their large and effective heating surface. Just a few points of Metropolitan Patented Boiler merit:—

Smooth, perfect finished castings.
Push nipple connections.

Large fire box, providing ample combustion chamber, and permitting a sufficient charge of fuel to require attention only at long intervals.

Deep ash pits, making the removal of ashes a slight task.

Large flues, making the boiler easy to clean. Grates that are made for hard usage and long service.

THEY ARE FUEL SAVING, NOT FUEL WASTING. AND ABOVE ALL, THEY COST LESS AND ARE CHEAPER TO OPERATE THAN ANY OTHER.

We also make soft coal boilers which are smokeless, and save 50% in coal.

Put Your Heating Problems Up To Us.
We've Been At It For 44 Years.

METROPOLITAN MATERIAL CO.

CONSERVATORIES OR COMMERCIAL GREENHOUSES

We put the same degree of care and workmanship into our commercial greenhouses as in our conservatories. However a commercial greenhouse has a much simpler design and consequently costs less money. The quality of the materials is exactly the same.

We have been studying greenhouses for many years and our success proves that our study has not been in vain. When you need anything in the greenhouse building line think of MONINGER'S. Estimates and sketches are free.

EVERYTHING FOR THE GREENHOUSE

ASSURANCE OF PROPER VENTILATION

is only to be found in the ADVANCE sash operating device. Our worm and gear means that the sash are securely held in any position and no possible chance for them to drop. Our truss type arm adds to the strongness and neatness of this machine and we are certain that you will be more than pleased with this equipment.

Now we want you to know about our GREENHOUSE fittings which are labor savers around your plant. We have a complete line of these such as shelf brackets, column brackets, Y fittings, pipe carriers etc. Prices are also to be noticed. Fair and square dealings at all times. To explain all let us send you our catalog.

Free on request by writing to

ADVANCE CO., RICHMOND, IND.

Cut Number One, showing deep, narrow water ways directly over the hottest part of the fire.

Cut Number Two. A rough sketch of the over-the-fire water ways to emphasize in your mind their key-hole shape.

Cut Number Three. Shows the secondary crown sheet at the right.

The Burnham's Secondary Crown Sheet A Great Economy Feature

LET'S get right down to bed rock on the question of the Burnham's economy. Let's see what they actually are; and prove to each of our selves that Burnham greenhouse boilers have some surprising economy construction features.

CROWN SHEET

Glance at cut Number One and you will see that running across the boiler, directly over the fire, are deep, narrow waterways, between which the flames when hottest, come in direct contact. They form the crown sheet of the boiler. The fire comes against two sides and the bottom of these deep water ways, instantly giving to the water its greatest heat.

WHY KEY HOLE SHAPED

Now look at cut Number Two. It shows you the actual key hole shape of these same across the boiler water ways. You can see how narrow and deep they are; making it possible for them to carry a thin amount of water, that will heat quickly.

Their shape is based on exactly the same principle as a kitchen stove with a wide bottomed pan filled with but shallow water; heating so much quicker than a narrow bottomed kettle containing exactly the same amount, but deeper water.

It's just common every day kitchen sense, applied to a boiler.

RAPID CIRCULATION

Now another thing about the key hole shaped water ways. That increased size at the top gives ample room for expansion and rapid circulation—a point of no small importance.

So much, then, for the harnessing up of the hottest part of the fire. Now let's take a glance at what next happens to it, on its way to the chimney.

SECONDARY CROWN SHEET

Between each section on each side of the boiler, are fine openings, up which the fire goes, coming in contact with water ways on the sides and top. Going up these side flues as it does, with considerable speed, it comes forcibly in contact with the water way at the very inside top of the boiler, which flue, as you now see, a secondary crown sheet.

With the water boiler, this secondary crown sheet gives an extra push to the water at a point where it is about to leave the boiler and go into the mains. It means increased circulation speed. With the steam boiler, it means a hotter, drier steam.

This secondary crown sheet is one of the Burnham's important economy features.

BACK AND FORTH TRAVEL

After coming in contact with the secondary crown sheet, then starts that famous Burnham "3 Times back and forth fire travel" for which the boiler is so well known.

It's "that long fire travel that also has much to do with making the short coal bill."

Back and forth the hot gases travel until they reach the smoke box and chimney with only just enough heat left in them to produce the necessary draft.

There are several other Burnham economies well worth mentioning, but these are the big ones the ones to keep in mind when some one tries to tell you that any other cast iron boiler can heat a greenhouse as economically as the Burnham Greenhouse Boiler can.

Railroads are crowded with business. Freights are slow. So order ahead of time, if you want your boiler on time.

Early Flowering LONG SEASON Spencer Sweet Peas

for Winter Flowering Under Glass

Since the introduction of Yarrawa Spencer Sweet Peas, great effort has been made on the part of California and Australian growers to produce Early-flowering Spencer Sweet Peas. We offer a list of varieties by one of the most prominent Californian and one of the most prominent Australian growers. One of their chief characteristics is their long season, period of blooming, frequently remaining in bloom for four months. Every one of the crosses were made from the old Early-flowering or Christmas Grandiflora types on the late or Standard Spencers as parents. We feel that there will be little demand for the common or Grandiflora Winter-flowering Type and have, therefore, decided to discontinue offering the same.

Californian Varieties Ready for Delivery August—September

EARLY MORNING STAR

The color is a deep orange scarlet or flame color in standard, with rich, orange-pink wings. The flower is practically the same color as the Late-flowering Spencer Thomas Stevenson. It does not burn out in the open and under glass will be magnificent. The flowers are large and of best Spencer form, and borne in threes and fours in wonderful profusion. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SNOWFLAKE

This is one of the best Early-flowering White-seeded White Spencers. The blossoms are very large and of the best waved Spencer form. The flowers are borne in wonderful profusion on long stems. The form is every bit as good as White Spencer. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SPRING MAID

Those who are familiar with the Late-flowering Spencer Mrs. Hugh Dickson, will have a good idea of what a handsome variety this is. The color is a light pink on a cream ground, and the blossoms have the same splendid characteristics of Mrs. Hugh Dickson for a florists' flower. It is a most effective flower and, like our other Early-flowering Spencers, it carries a great wealth of blossoms borne in fours on long stems. There is no Early Spencer Cream Pink which is as attractive as Early Spring Maid. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY MELODY

This is a deeper shade of pink than Early Song Bird on white ground, closely resembling Countess Spencer and near Hercules. It might be described as rose pink on white ground. The effect, when bunched, is most pleasing. It is very floriferous. The flowers are borne on long stems and mostly four large, well waved blossoms to each stem. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY SONG BIRD

The flower is the same color as Florence Morse Spencer and Lady Evelyn Eyre, and a bit lighter than Elfrida Pearson. It has the same excellent form and features of Mrs. Hugh Dickson, but is on a white ground. The placement of the flowers is splendid for packing and the flowers are borne on long stems in threes and fours. When in full growth it seemed as though every stem carries four large blossoms. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY HEATHER BELL

This will be one of the most popular shades with all florists, as it will be useful for making up for any occasion. It is a little like the variety known as Anita Wehrman, but vastly superior in every way. The flowers are very large, borne in fours and threes on long, stout stems, and are of beautiful, bold Spencer form. The color is a rich but pleasing mauve, but after standing in water the color becomes a beautiful mauve lavender. Pkt., 25 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

Australian Varieties Ready for Delivery NOW

CONCORD STRAIN

Pkt., 18 seeds each of any of the following varieties, 35c.; 5 pkts., \$1.50

CONCORD PINK. A beautiful, new variety of a most attractive shade of delicate pink. The flowers are large and of true Spencer form. The stems, which are long and strong, usually carry 3 large flowers.

CONCORD CRIMSON. A variety of great merit on account of its glowing color. It is a rich crimson; the flowers, of true Spencer form, are borne on strong, stiff stems.

CONCORD LAVENDER. Without a doubt this is the finest of all Lavender Winter-flowering Sweet Peas. The color is a beautiful shade of rich, rosy lavender. The flowers are of true Spencer form.

CONCORD WHITE. A splendid, pure white variety of wonderful vigor and

substance. The flowers are pure white and of ideal Spencer form, borne three and four to the stem.

CONCORD SALMON. A rich shade of salmon pink and very free flowering. The flowers are borne three and four to a stem and are of true Spencer form.

CONCORD BLUE. This magnificent variety is of a beautiful sky-blue color, sometimes varying darker, the variation, however, being slight. Quite the finest sky-blue we know of.

CONCORD PURPLE. A leader in its color. When first opening, a delightful shade of mauve purple, changing, as the flower ages, to purple blue. The flowers are of ideal Spencer form and quite large.

YARRAWA

The finest Rose Pink Winter Flowering Spencer; the ideal florist variety. Pkt., 15c.; ¼ oz., 35c.; ½ oz., 60c.; oz., \$1.00; ¼ lb., \$3.25; lb., \$12.00.

The Glory Fern (*Adiantum Farleyense Gloriosa*)

Adiantum Farleyense Gloriosa

THE GLORY FERN or RUHM VON MORDRECHT

This splendid Fern which so closely resembles *Adiantum Farleyense* in appearance and which does not require the special skill and care in growing that is necessary to produce good plants of *A. Farleyense*, has quickly made a place for itself not only on account of the fact that it can be produced for little over half that of growing *Farleyense*, but also because either in a cut state or as plants used in decorative work, it will outlast the old variety ten to one, making it an available subject where *Farleyense* can not be used at all. Since its introduction some 5 or 6 years ago there has never been a supply large enough to meet the demand. With this in mind we have prepared this season an extra large stock, which is in prime condition and we now offer select

3 inch pots, \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000

4 inch pots, \$3.50 per doz.; \$25.00 per 100

For a Complete list of seasonable stock see our current Wholesale List.

The above offer is intended for the trade only.

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—*Lope*.

Bouvardias

These can be lifted before they get any sharp frost, and may be stored in flats of soil for stock, or they can if desired, be planted in the bench of a warm house where they will give a fine crop in February and March. If taken up with a little ball of damp earth, they will lift quite well. If all earth is shaken away, they will wilt badly and be slow in recovering. Shade for a few days after lifting and the plants in pots will establish themselves more quickly under glass than outdoors. 60 degrees at night will grow them along all right. These onetime prime favorites are not grown as they once were. Like many other plants, they have had their ups and downs and a turn of the tide in their favor will soon be back again.

Carnations

Look over the beds every day and water where they show dryness. Keep on ventilating all day and even at night. If healthy field-grown plants have been housed make it a point to keep them so; get a bench full of live stock and busy tops by the middle of October. If there should be a little let-up in the rush you couldn't take better advantage of it than to get the supports put in place for the carnations. Which is the best kind to use? The kind which in your judgment will hold the plants up well, make the cutting of flowers an easy matter and will let the sun and air into the rows. The winter months are not the time to attempt to get a stunted plant into condition, so keep them growing now.

Giganteum Lilies

Make it a point to get these lilies as soon as possible and pot them without delay. Easter comes on April 8th next year. Give them a rich bulb compost and use either 6 or 7-inch pots. After they are potted place them outdoors in a cold frame. Cover the pots with 5 or 6 inches of soil and if we have very heavy rains give them some protection as they do not like to be saturated. They will make enough roots by the middle of December to be brought in and placed on a bench in a temperature of about 50 degrees at night. The bulbs can be potted any time during October and will come in all right, but of course, the earlier they can be potted the better. Mix up the compost now and place it under cover and see that you have enough pots.

Miltonias

These plants should not be allowed to become dry in their growing season and, even when at rest, they should never remain dry for any length of time. Syringing is

Next week - *Ardisia crenulata*; Pansies for Winter Flowering; *Pompon Dahlias* for Christmas; *Schizanthus Wistoneusis*; *Swainsona*; Reminders.

necessary at all seasons, for this group is a subject for thrips. *Miltonia flavescens* and *spectabilis* do better when suspended from the roof in baskets or pans. One of the most beautiful of *Miltonias* is *M. vexillaria*. It does very well in a house with a northern exposure. It will not stand a close stuffy atmosphere. Always have a constant circulation of top and bottom air on when possible. A winter temperature of 55 to 60 degrees seems to suit well. This species should be more widely grown commercially as it is unexcelled for table decorations. Botanically, *Miltonia* is closely allied to *Odontoglossum*, but in many ways their culture is very different. The allied species, *Miltonias candida* and *cuneata*, do well in liberally drained pans or pots. A good compost for these is rough chopped sphagnum and fibrous peat, with quite a few pieces of broken charcoal mixed very thoroughly. Water so as to keep them in a nice moist state at the roots.

Transplanting Large Palms

One should not wait until the roots, assisted by the decaying wood, have eaten their way through the crumbling wood. With a properly rigged tackle the plant is raised, the new tub placed under it, the plant let down into it, worked about until it is exactly in the center, straight up and down and just right as to the depth in the box, and now the new soil is rammed into the remaining space all around, after which a thorough soaking will complete the job. When repotting large palms, make the compost rich; say to three of chopped sod use one part of well decayed manure, and about a five-inch pot of bone meal to every barrow load of soil. Keep the palms clean by examining them every ten days and, when needed, giving a thorough cleaning to prevent insects from gaining a foothold. When very large plants must be transplanted the work is usually put off until September, this being considered the best time for all such operations. When potted give them a place where they can be kept somewhat close for a week or two.

Reminders

Propagate and transplant peonies now, and when planted mulch the soil with half decayed manure.

Seedling primulas, cinerarias, calceolarias, etc., should be kept quite cool with ample ventilation at all times.

After being lifted from the outside and potted, plants must be kept lightly shaded and sprayed until they are re-established.

Allow crinums and other bulbous stock to finish their growth before lifting. They will then keep dormant longer in the spring.

Pompon Dahlias for Christmas; *Schizanthus Wistoneusis*; *Swainsona*; Reminders.

An anomaly Now that the time is approaching for advance prize schedule framing we would call attention to the rather inconsistent fact that in the Garden Club exhibitions and other affairs in which select society ladies figure influentially much more attention is given to the matter of flower

arrangement and the perfecting of floral color combinations for decorative purposes than at those shows that are more or less exclusively under the jurisdiction of the professional people whose well-being must in the final reckoning so largely depend upon the status of this phase of floricultural industry. Flower arrangement is the extreme fine art of flora handicraft, and it is indeed a singular anomaly that in a flower show intended for the public eye this truth should be so generally disregarded.

A big undertaking

We publish in full the itemized report of the chairman of the National Flower Show Committee showing in detail the complete financial transactions connected with the Fourth National Flower Show at Philadelphia. There is much more in this report than the mere array of figures although we are quite sure the number and size of the items given will be a surprising revelation to the majority of our readers. In no other way can so clear an idea be gathered of what it means to successfully carry through a National Flower Show as by a careful perusal of this report of the committee which so creditably fulfilled the heavy duties which had been entrusted to them. As a chart for those who may be ambitious to emulate the Philadelphia exploit and "go it one better" if possible, Mr. Asmus' document will be invaluable. It will not be out of place to suggest here that the Society cannot expect to enjoy perpetually the amount of gratuitous work which has been done so unselfishly hitherto by devoted members at much personal sacrifice. The National Flower Show has come to stay, unquestionably, and all the necessary machinery for its orderly and systematic management must be installed and perfected as rapidly as possible, and all on a strictly business basis.

A situation and a forecast

With china asters of very inferior quality wholesaling at a price approaching winter quotations on carnations, five to ten dollars per hundred asked for lily of the valley, and cattleyas held at a dollar to a dollar and a half per flower the summer of 1916 has certainly developed some most unusual conditions in the flower market. The foregoing refers especially to the situation in New York city, but other centres have been going through experiences not dissimilar. The present week sees the incoming of the second and better crop of asters and the pinch, so far as asters are concerned, is probably at an end for the present. Growers having anything to offer in the cut flower line during the last few weeks have had good reason to feel elated and as a direct result we may expect to see production overdone in the summer of 1917. Then the man who leads in the quality of his product will be the only one having "a ghost of a chance," for the peculiar circumstances operating this year are not likely to be paralleled for a long time to come. It is sad to see some of the trashy stuff that is sent to the city flower markets with the expectation that it will find a purchaser. Making due allowance for the attacks of disease and insects and the vagaries of the weather, it remains that inefficiency and inexcusable carelessness are very largely responsible for most of the rubbish that encumbers the tables of the wholesale dealers. Starting with bulbs of equal grade one grower's gladiolus spikes will command a ready sale at from four to six cents while those from his neighbor lie around without a taker at one dollar a hundred or less. It is plain that the latter doesn't know or doesn't care and this class we shall have always with us. "Tis true 'tis pity; and pity 'tis 'tis true."

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur Ruzicka

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Ruzicka. Such communications should invariably be addressed to the office of HORTICULTURE.

Mulching Early Planted Beauties

Beauties that were planted early will have to be mulched now to protect the roots from the hot rays of the sun, and to give the plants plenty of plant food, as it will be necessary to keep the soil rich all the time to insure their growing properly. When the growth is above the top wire, there has been a crop or two cut off, and with the growth that is on the plants it has made quite a heap of stem, bud and foliage that came out of the soil. The best time to apply the manure is when the plants are starting for another crop and the new growth is about half-grown. Some growers claim that mulching will check the plants for at least a week, but we have never seen any ill effects from mulching when it was done properly. The manure should be well decayed and should have been turned over at least once a week for several weeks prior to applying it to the benches. Before the manure is applied it is well to go over the plants and clean them well, picking off all broken and dead leaves as well as all the leaves on the bottom that would touch the manure when it is applied. Then a good top dressing of bonemeal should be applied and rubbed into the soil gently. Do not allow the men to scratch the benches over when they clean them or when the bonemeal is being rubbed in. By no means allow them to use scratchers made of steel as they are sure to go too deep with them and destroy any number of real nice roots that the plants need very badly. It is best not to apply too much manure at one time, and then if it should be necessary apply a little more later on. It should be watered as soon as it is applied, which will take out any heat that may be in it, and at the same time wash most of the ammonia into the soil where the roots will get it. If the benches are not watered right after mulching the plants are likely to be burned. Needless to say, plenty of air should be carried and never should the house be closed tight after mulching. Later when the weather is cold a crack of air can be carried, which will be sufficient to carry away any fumes that may come from the manure. This applies to narrow houses, but the wide houses will require about three inches of air at least.

Supplies and Coal

It is quite some time ago that we recommended getting plenty of all supplies on hand, and now with the railroads being threatened by strikes all over the country we mention it again. We hope the railroads will not be tied up but no one can tell. It takes quite some time now to get anything as everything is crowded full and freight moves slowly. Order the supplies now so that there will be plenty of time for them to come before they are needed.

Tying

When tying be careful to see that the plants are not bunched up too much, as it is early in the season and the plants would lose a lot of leaves and come to harm that way. In "stringing" to wires see that the knot used to tie around the growth is free and loose so that there will be no danger from choking as the plant grows and the shoots increase in thickness. To put one string around a plant to tie in all growth is far from proper. Each shoot should be tied separately and down between the first and second eye. If this is done right all over it will be a great help while cutting later on and there will be less roses cut wrong and the cutting can be done in far less time, as the string will serve as a guide. See that the stakes are tied so that they will not slide when the plants are syringed later in the season. White cord should be used for this purpose and the knots well tied so that the stakes will not move. While the plants are being staked, see that the stakes are all put in on the same side of the plant so that they will be in rows, same as the plants should be. With a little care this can be accomplished very quickly and the work will look like something when it is all done.

Liming the Benches

As soon as the soil begins to turn green badly in spite of frequent stirring and care in watering it is a sure sign that the soil is sour and lime will have to be used. If any acid phosphate was added to the soil at planting time the lime should not be applied unless absolutely necessary, as the lime will kill the acid phosphate and render it worthless as plant food. With no phosphate in the soil it will be an easy matter to apply a dose of lime, which should be air-slacked lime or hydrated lime. If the former, see that it is fresh, but cool, as hot lime should not be applied. It is not a very pleasant task at best and hot lime will make it much worse. It will not be necessary to apply a very heavy dose, just enough to whiten the surface of the soil nicely. This can be rubbed around a little bit after which the plants can be watered. To save the hands it may be better to scratch the benches over just very lightly before the lime is applied, after which the plants can be watered without another rubbing over. The lime eats into all scratches very rapidly and where there is quite a little of the work to do it will be best to rub the benches over before the lime is applied. If the soil shows acid at all it will be best to apply the lime while the plants are still small, so that it will be safe to work the soil over and there will be very little danger of disturbing the roots.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS

Report of the Convention Completed

Our report last week brought the story of the Convention proceedings up to the time of adjournment on Wednesday, August 16.

Closing Session, Thursday Morning, Aug. 17.

At the hour of ten o'clock Thursday morning, Aug. 17, President MacRorie, after calling the convention to order, announced that the polls were now open for casting of ballots for election of officers. Secretary Young announced the tellers of election and President MacRorie announced the names of sundry committees on Memorials to deceased members and on final resolutions:

The report of the Committee on President's Address was then read by its chairman, W. F. Gude.

Report of Committee on President's Address.

Your Committee to whom was referred the several recommendations in the address of President Daniel MacRorie, respectfully report as follows:

With reference to holding our convention on concurrent dates with the National Flower Shows as recommended by the President, your committee, having given the subject careful consideration, is of the opinion that no specific recommendation is required from this committee, inasmuch as this suggestion has been acted on practically by the convention in selecting St. Louis for the convention city for 1918, the National Flower Show Committee having already selected said city for the National Flower Show the same year, and it is probably the intention of the Executive Board to call the Convention on dates in conjunction with the National Flower Show, they having, under the amendments as adopted, the power to change dates of the Convention as conditions may demand. This will try out the new idea in actual practice at that time.

The President's address contains a warm endorsement of the idea of children's gardens, and your committee highly commend his remarks in connection therewith, and would recommend concurrence in his recommendation that this society give its fullest support toward the promotion of school gardens as a potent influence for moral uplift and esthetic development of the whole people. We deem it also the duty of individual florists, whether affiliated with organizations or not, to also encourage this movement which has now received such a strong impetus in this country.

Referring to that part of his address wherein the President concurs in the views of his various predecessors who have supported the idea of convention gardens, your committee fully recognize the educative influence and uplift of the convention gardens and not only do we believe that this influence is felt in every city where such gardens have been established and will be so felt in the future, but where these gardens afterwards crystallize into permanent features, as it is not impossible in many cases that they will, the effect becomes a permanent and lasting one that does not expire with the occasion. Nevertheless your committee, while sensible of the truth of this proposition and rejoicing in what has been accomplished, believe that tact must be used in this as in all matters that require co-operation, and therefore if in some cases it is found that in order to have a convention garden too many other equally valuable matters must be sacrificed, in such case the idea might be relaxed a little rather than be strained to the breaking point; and therefore we believe that the convention gardens ought to be encouraged wherever feasible in the locality where we assemble if not too great a burden on the society inviting us.

The idea always should be, the Garden for the Society rather than the Society for the Garden.

In regard to the recommendations of the President as to a permanent secretary, the experience of the largest and best organizations in this country has been along the idea of retaining in office a competent secretary so long as he continues to serve acceptably, as absolutely necessary to the proper conduct of the association affairs; and we believe that such a man should be retained under conditions that would permit him to give full time and attention to the duties of his office; and it is to be desired that the governing body will be able to work out this problem satisfactorily in the very near future.

With regard to the recommendation by the President with reference to "Mother's Day" being permanently fostered and protected, we understand this to mean that the President wishes to see the work carried on thoroughly and efficiently rather than spasmodically and inefficiently, and that it be in the hands of a permanent committee from our own organization who could best enlist the support of our membership. We heartily endorse this idea and would further suggest that the committee, if made permanent, be

also given charge of looking after the proper observance of any similar days that may hereafter be established.

President MacRorie is moved to make most feeling mention of the decrease during the past year of one of the beloved members of this society, he who was known and universally esteemed, our late Treasurer, William F. Kasting. Your committee feel that they but voice the universal feeling when they suggest that a committee be named by the President to prepare a suitable memorial in the form of engrossed resolutions commemorating the work of Mr. Kasting and expressive of our sense of bereavement in his taking away.

In conclusion, we beg to add our word of appreciation of the evident desire of President MacRorie to contribute the best that is in him to the advancement of the aims and objects of this Society, and we not only commend his suggestions but admire the broad and catholic spirit in which he has treated the problems that confronted him during his administration, and the national view-point that he has manifested.

W. F. Gude, Chairman, E. G. Hill, Frank Stuppy, J. A. Peterson, George Asmus, Committee.

On motion of R. C. Kerr, above report was adopted as read, and the recommendations concurred in. Secretary Young read the Report of Judges of Trade Exhibits as follows:

Report of the Judges of the Trade Exhibits.

American Bulb Company, Chicago, Ill., decorative tritinate novelties, Certificate of Merit; the balance of this exhibit awarded Honorable Mention.

A. L. Randall Company, Chicago, Ill., exhibit of novelties and accessories for retail florists' use, Highly Commended.

M. Rice Company, Philadelphia, Pa., exhibit of florists' baskets and accessories, Honorable Mention.

Gullett & Son, Lincoln, Ill., display of foliage and flowering plants, Honorable Mention.

H. C. Doescher, New Orleans, La., exhibit of 32 distinct types of Nephrolepis, same being magnificently grown, Certificate of Merit.

American Bulb Company, Chicago, Ill., display of baskets for retail florists' use, Honorable Mention.

American Bulb Company, Chicago, Ill., collapsible folding canopy, for decorating purposes, Honorable Mention.

Lord & Burnham Co., Irvington, N. Y., an exhibit of improved sectional iron frame greenhouse, of curved glass eaves design, 11 ft. by 16 ft., 8 in., complete with iron and tile plant benches, wiring frames, etc., Certificate of Merit.

Darlice Florist, San Francisco, Cal., cut Chrysanthemums and other flowers, Certificate of Merit.

Advance Company, Richmond, Ind., new

expansion joint and scale trap, Certificate of Merit.

H. C. Doescher, New Orleans, La., home grown Lily Bulbs; committee recommends that the exhibitor be encouraged to continue the growing of these lilies as the same appear to be very successful in healthy condition, showing that the bulbs may be grown satisfactorily at a price.

Cottage Garden Nurseries Company, Eureka, Calif., exhibit of Pacific Coast grown Holland Bulbs. These bulbs are a very high quality and thoroughly ripened. Certificate of Merit.

Magnolia Nursery, New Orleans, La., eight Phoenix Robeleni, Honorable Mention.

Cohen & Hiller, New York, ribbons and novelty accessories, Honorable Mention.

H. Bayersdorfer & Co., Philadelphia, Pa., baskets and accessories for retail florists' use, Honorable Mention.

O. E. Falls, Kansas City, Mo., literature and material for use of retail florists, Certificate of Merit.

Burlington Willow Ware Shop, Burlington, Iowa, willow ware baskets, Honorable Mention.

Poehlmann Bros. Co., Morton Grove, Ill., palms and foliage plants, showing very fine commercial cultivation, Highly Commended.

J. A. Peterson, Cincinnati, Ohio., foliage plants of very clean quality, Highly Recommended.

Foley Manufacturing Co., Chicago, Ill., small modern greenhouse, Honorable Mention.

John A. Evans Co., Richmond, Ind., a double clamping of large chain in shafting pipe, also bringing the post in center to equalize the weight on roller bearings; also housing worm gear to protect from dirt and water, Certificate of Merit.

Kroeschell Bros. Co., Chicago, Ill., your committee recommends in view of the many valuable improvements claimed for the new steam boiler that the judging of their exhibit be passed on to a committee of experts at some future exhibition.

(Signed): Wm. F. Gude, E. G. Hill, C. L. Baum, H. A. Chopin, Geo. Asmus, Secretary.

Secretary Young read a communication from R. Mees & Zoonen, bankers and insurance brokers, Rotterdam, Holland, who stated that they were largely interested as brokers in the insurance of bulbs and plants for transit from Holland to the United States, and to facilitate settlement of insurance adjustments, in places where there are no Lloyd's agencies or some like competent authority, they desire to secure co-operation in the way of having representatives of the Society at such points verify claims or assist in verification so that the insurers may more safely carry on business of insuring bulbs, etc., destined here.

E. G. Hill thought this was a very vital matter, and after the matter had been discussed by various members, Mr. Hill moved that the matter of adjustment of claims on bulbs be immediately referred to nearest State Vice-President with power to act, and that he ask assistance from local members in the adjustment and statement to be made to the insurance companies. This was seconded by Mr. George Asmus, who proposed that it be amended so as to provide that no financial obligation would rest upon the Society of American Florists by reason of its co-operation in this manner. The amendment was accepted, and the motion as amended was duly carried.

On further motion by Mr. Asmus the Tariff and Legislative Committee were instructed to look into the legal aspects of this question and report their recommendations to the Executive Board at the next meeting as to the method of procedure that would save the Society harmless and promote the objects sought to be attained

so far as practicable therewith.

Secretary Young read the Report of the Judges of Convention Garden Exhibits, as follows:

Report of Judges of Convention Garden.

To Henry A. Dreer, Water Lily Specialists, Philadelphia, Penn., best exhibit in the entire garden. A Certificate of Merit.

To Conrad & Jones, a Certificate of Merit for the best Pink Canna and Honorable Mention for balance of exhibit, Honorable Mention for size of flowers on the Canna Wintzer's Colossal, Honorable Mention for the color of the foliage of the Canna Juanita.

To Henry A. Dreer, Certificate of Merit for the Canna Eureka as the best White Canna in the Garden, and also Honorable Mention of the Cannas Hungaria, Orange Bedder and Schopenhauer.

To Arthur T. Boddington, New York City, Certificate of Merit for the Canna Boddington's Meteor as the best red Canna in the garden.

To Wm. Tricker & Son, Arlington, N. J., Certificate of Merit for the Nymphaea Gracilis, as best hybrid. Certificate of Merit for the best hardy Nymphaea named Paul Herriot. Honorable Mention of the rest of the exhibit.

To St. Louis Seed Co., Certificate of Merit for best red foliaged Canna.

To Vaughan's Seed Store, Honorable Mention of Canna Firebird.

To Texas Rose Gardens, Rockdale, Texas, Honorable Mention for rose exhibit.

To California Rose Company, Pomona, Calif., Certificate of Merit for rose exhibit. Special mention of the varieties La Detroit, American Beauty and Mlle. Edouard Herriot.

Special Mention of the exhibits of L. H. Read, of Xanthosomas, Carlyle & Sons, Alvin, Texas, Tuberoses; and W. J. & M. S. Vesey, Fort Wayne, for Geraniums.

A Certificate of Merit was awarded to the Park Department for the magnificent bed of Crotons.

Mr. Asmus paid a high tribute to Mr. Brock, Supt. Parks, Houston, for his untiring work in arranging for and looking after the convention garden establishment and conduct, and moved a rising vote of thanks to Mr. Brock, which was carried. Mr. Brock being called on for a speech, responded that he highly appreciated the action taken by the convention, and believed that all had seen and understood the adverse conditions under which the work had been done. He had tried to do his best.

Secretary Young read a communication from Harlan P. Kelsey, Salem, Mass., dated November 17, 1915, asking that a committee on Nomenclature be appointed to cooperate with similar committees of the American Nurserymen's Association, the Ornamental Growers' Association, and the American Seed Trade Association, and on motion of Mr. Young, the appointment of such committee was duly authorized.

Reports by the Entomologist, Dr. Thos. F. Headlee, H. P. Knoble, Chairman, and C. W. Ward of the Committee on Development of American Products, and by George L. Peltier, Pathologist, were on motion considered read and their publication in the Proceedings authorized.

Election of Officers.

The Report of the Tellers of Election was submitted as follows:

Unanimous ballot cast for the election of Robert C. Kerr, Houston, Tex., President; A. L. Miller, Jamaica, L. I., Vice-President; John Young, Secretary; J. J. Hess, Treasurer. For Directors result of vote follows: Total vote, 207, of which there were 45 votes cast for Walter W. Coles, Kokoma, Ind., 89 votes for Frank Stuppy, St. Joseph, Mo., and 73 votes for George W. Hess, Washington, D. C. Messrs.

Stuppy and Hess having received a majority vote were duly elected.

On motion of Mr. De La Mare, the appointment of a committee was authorized to prepare suitable memorials on the deaths of Wm. Tricker and Albert McCullough during the past year. John G. Esler, A. T. De La Mare and J. A. Peterson were named as such Committee.

Memorial Resolutions.

Memorial resolutions on the deaths of William F. Kasting, Edwin Lonsdale, John W. Poehlmann and W. Atlee Burpee were read as follows, members standing during the reading:

William F. Kasting.

"Whom the Gods love die young!" To none can this be more truthfully applied than to William F. Kasting, one time President of this Society of American Florists and for many years its honored Treasurer. Intensely loyal to his friends, with malice in his heart toward no man, outspoken, honest, fearless, he had every quality that might become a man and bind him to his friends with hooks of steel. So frank and sincere was his character, so little there was of any of the lesser frailties of human nature that make for envy, jealousy or spite, that William F. Kasting caused none to envy but all rejoiced in his progress and success.

His affiliations were many; he belonged to a large number of organizations to each of whom he gave his best, and to none more than to the florists whom he loved and whose calling he was always proud to represent. In addition to his honors in the national Society he was President of the New York Federation of Floral Clubs, had served as President of the Buffalo Florists' Club, and was a member of many local florists' clubs in other cities, including New York, Chicago and San Francisco. He was a member of numerous secret and fraternal orders and of many philanthropic and social organizations, including the Rotary Club, the Orpheus and other German singing societies. Rarely it has been said has one man had so many friends in such various conditions of life and activity as this one; rarely has a man of more humble beginnings achieved such high success or risen higher in the respect and esteem of all his associates and neighbors, those who knew him best.

Peace to his fragrant memory. Here let us all drop a flower of memory to him who was our friend and our helper in all that we held dear. He fell asleep and woke, let us fondly hope, in a fairer land.

Signed, George Asmus, August Poehlmann, J. J. Hess, Committee.

Edwin Lonsdale.

In the death of Edwin Lonsdale, of Lompoc, California, the Society of American Florists and Ornamental Horticulturists has lost one of its most valued and tried friends of its earlier days.

Mr. Lonsdale served in the capacity of Secretary and also was President of the Association; and he gave of his time and money without stint. Much of the growth and development which has since taken place in this Society was due to the work of Edwin Lonsdale in no small degree in laying the foundations well. His intelligent help was always forthcoming when the demand arose.

Edwin Lonsdale was gifted by nature with a genial happy disposition, and he was ever ready to give information and cheer to those engaged in floricultural pursuits. He was a great student of plant life, and contributed many valuable articles, not only in regard to the hybridization of plants, but also their care and culture. He was greatly interested in the carnation in its earlier career, and also was an excellent grower of roses. The Society had the services of Mr. Lonsdale upon any and all occasions, and few men belonging to our organization have contributed so much as did Mr. Lonsdale to its advancement.

E. G. Hill, John G. Esler, J. A. Peterson, Committee.

W. Atlee Burpee.

The lives of all men are precious, far more so than we stop to realize, for every man is called into the world to perform

his allotted part toward making this earth better and brighter.

All men may be born free and equal, but it comes about that through environment and development some men become pre-eminently distinguished above their fellows for certain talents, although not necessarily superior in all things.

W. Atlee Burpee was pre-eminently distinguished among men. Possessed of talents in every direction and with ability to make himself famous in whatever avocation he might choose to take up, his wonderful understanding of men, his magnetism with men, individuals if not in the mass; his highest gift of endearing himself to others, will always remain fixed in the memory of those whose good fortune it was to know him. No man was ever better loved by his friends.

For the rest, a highly successful business man of unblemished reputation; a devoted father and husband; a man and a friend whose loss is irreparable; we mourn his death, and spread this brief tribute to his memory in the pages of our Proceedings that all who read may gauge the affection in which we held him while he was living and would hallow his memory now that he has gone.

A. T. De La Mare, Chairman; Joseph Heacock, Frank Stuppy, Committee.

John W. Poehlmann.

John William Poehlmann, president of the Poehlmann Bros. Co., well-known Chicago florists, died at his late residence, 4728 Beacon street, July 14, aged 49 years. He was born in Milwaukee, Wis., of German parentage, and was associated with his father, John George Poehlmann, in the retail grocery trade in that city until 1890, when he and his brothers, Adolph and August, formed a partnership and engaged in the florist business at Morton Grove, Ills.

In the death of Mr. Poehlmann the Society of American Florists has lost one of its most successful members. Starting only a few years ago with very limited means, he was largely instrumental in the development of his firm's splendid business, said to be the largest of its kind in existence. He was a hard worker, constantly at his post, and always kindly to his associates and employees. Mr. Poehlmann's industry has left deep, lasting imprints on the sands of American floriculture and his many friends deeply mourn the early passing of one so gifted and so unassuming.

Signed, Michael Barker, Philip J. Foley, T. J. Wolfe, Henry Berning, Committee.

Secretary Young then read the Report of the Committee on Final Resolutions, as follows:

Final Resolutions.

WHEREAS: The members and guests and ladies in attendance on the Thirty-second Annual Convention of the S. A. F. & O. H. have now for four days enjoyed the hospitality of Houston and its citizens, and have been overwhelmed with kindness and courtesy at every turn; expecting to find the weather warm we have been agreeably disappointed by finding that the friendship of our Houston brethren is as pure as their atmosphere, and their hearts as warm as we had expected to find the weather; our experience being that we have been disappointed in all that we expected to suffer and only surpassed in our expectations by all that is agreeable, now desire to record as best we may our gratitude to those who have so well and pleasantly entertained us; therefore,

RESOLVED: That we tender a special and unanimous rising vote of thanks in commemoration of this occasion to the following: To Rev. W. S. Jacobs, who opened our convention by asking the divine blessing on our deliberations; to Hon. Ben Campbell, Mayor, who so beautifully welcomed us and who taught us new lessons of the ennobling influences of our chosen calling in life; to the City of Houston for its liberality in housing us in the

ample and commodious auditorium where our meetings were held; to the Rice Hotel management and attaches for many courtesies; to the Chamber of Commerce, for elaborate entertainment given us; to the Interurban for special rates for our outing; to the Queen Theater for theater party; to the Houston florists and their efficient committees in charge of convention arrangements; to C. L. Brock, Park Supt., for his arduous labors and untiring work in the matter of the Convention Garden; to the various exhibitors who brought here a trade exhibit of great interest to the trade and to each of us who attended it; to the daily and technical press for full and painstaking reports of our various sessions; and to all who have contributed to our comfort and enjoyment while here.

E. G. Hill, A. T. De La Mare, Frank Stuppy, Committee.

The Convention then adjourned to meet a year hence in New York City.

REPORT OF NATIONAL FLOWER SHOW COMMITTEE.

By George Asmus, Chairman.

Mr. President and Members:

I have the honor to report that the Fourth National Flower Show, held at Philadelphia, March 25 to April 2, was a success from every point of view. It was a success through the influence the Society was able to exert among its local members, through its friends, in the trade and out of it, and through the kindly patronage of the thousands in and around Philadelphia interested in horticulture and floriculture. In comparison with previous shows it showed a great advance in the realization of the possibilities attaching to such a show, your committee not failing to profit by the experiences resulting from the first three shows.

Foremost was the matter of organization, and to the extent of the ability of your committee this was made as perfect as to them seemed possible. It is most gratifying to be able to state that the local bodies established nobly carried out the work assigned to them, working most harmoniously to the common end—success.

Very long before the dates fixed for the show, it was realized that the space afforded by Convention Hall, the only building in Philadelphia considered large enough for our project, was inadequate for our purpose, yet those in charge of the show were not discouraged, and, by the conservative use of discretionary powers, a huge show was housed which entailed little or no friction among the large number of exhibitors in the different sections. In this connection, the thanks of the committee are extended to those exhibitors in our trade section who cheerfully consented to the different changes in location of their exhibits made necessary by construction of space in order that our exhibits in the competitive section might have due prominence.

Unfortunately for us, the laws in force in Philadelphia prevented a public opening of the show on the two Sundays during the show period, and we were not enabled to profit by the large influx of visitors which we are assured would have been in evidence

on those days; although on the second Sunday we were permitted to sell associate members badges at 25c. each, and the gross sale of these badges amounted to \$1217.00. In the arrangement of the hall, its heating and lighting, the committee was confronted by conditions the settlement of which entailed much negotiation, but which resulted to the great advantage of the Society. The minutes of our committee describe these fully, and they need form no part of this report.

This show was financed entirely by the Society, through the guarantee fund provided by those in its membership who were and are confident that the National Flower Show has become an established feature of the work of our Society. It is pleasing to be able to state that those subscribing to this fund have not only been reimbursed, as regards the fifty per cent. call made upon their subscription, but have received a dividend of ten per cent. upon the entire amount subscribed. I would make the suggestion, concurred in by many, that these subscriptions remain as a permanent support to National Flower Shows, under such conditions as the Society may determine upon. This would obviate the necessity of inaugurating a fund for each future show, and thus entailing much unnecessary work upon the part of the committee and its officers.

The thanks of the committee are extended to the subscribers to the guarantee fund, for their endorsement of our work in a pecuniary way, and their willingness to share with the Society the various liabilities attending the promotion of a National Flower Show. In this expression, I am sure the Society as a body will join us.

(Here follows the list of subscribers to the Guarantee Fund):

Without doubt, we go upon record as offering at this show the largest and most valuable premium list ever presented at a horticultural show in America. This we could not have done without the cheerful aid and support of many of our friends in both private and commercial circles. Your committee deeply appreciates the support from these sources, and gratefully acknowledges the various donations.

(Here follows the list of special prizes, including those collected by the American Rose Society, and American Carnation Society):

To one outside the circle of those actually engaged in the work of inaugurating a National Flower Show, the labor involved in the staging of such a show can hardly be realized. While your committee conducts its work as a directing body, much of the detail must be accomplished by the local organization, and, as chairman of your committee, I have felt myself particularly fortunate in having been able to assist in effecting an organization in Philadelphia whose work was a most important factor in the success of the show. I should feel that I were remiss did I not particularize in regard to this work.

To William Kleinheinz, chairman of the committee on exhibits, our thanks are extended for the work performed by his committee in the securing of exhibits in the competitive classes, and for his personal effort in this direction. We are gratefully mindful of the fact that W. F. Therkildson, chairman of the committee on publicity, was instru-

mental in obtaining for us publicity for the show of a very high order and extensive character. Mr. Therkildson's work in this connection is worthy of the Society's highest commendation. The work of Louis Burk, as chairman of the committee on concessions, was most thorough, and the arrangements made by this committee were both admirable and profitable. Robert Craig, as chairman of the committee at large, with his committee, cared for many things without the province of other committees, and helped materially the work of the organization. The committee on lectures, of which J. Otto Thilow was chairman, instituted and directed a program of lectures on horticultural subjects, which was an important and popular feature of the show, and, consequently, a source of much gratification to those interested in the success of the show. Samuel S. Pennock gave unstintingly of his time to attend to his duties as chairman of the committee on printing. Much important work devolved upon the committee on leases, contracts and hall, of which Adolph Farenwald was chairman, all of which was carried out with a zeal much appreciated by our organization. The committee on trade tickets, whose chairman was E. J. Fancourt, gave service which was long and continuous. The work of this committee was most important, and was accomplished in a most skillful manner. Wm. P. Craig, as chairman of the committee on special premiums, was instrumental in the addition of many donations to our list of special prizes. The committee on information was a somewhat new feature of our show organization, and we must congratulate Fred Cowperthwaite, chairman of the committee, on his having proved the necessity for a bureau such as was established, and the good results accomplished. Chas. Henry Fox, chair-

man of the advertising committee, which ultimately merged with the publicity committee, with his committee rendered admirable service in matters concerning the advertising of the show. The committee in charge of decorations, John P. Habermehl, chairman, through the skill displayed in the decorations installed, met thoroughly the expectations of the National Flower Show Committee. The committee on special features, of which Chas. H. Grakelow was chairman, did excellent work. It is to be greatly regretted that some very important features arranged by this committee were, owing to unexpected lack of room, impossible of accomplishment. Franklin Barrett, as chairman of the committee on aquariums, was instrumental in the staging of an aquarium exhibit which was a highly attractive feature of the show. The nursery interests were looked after by the nurserymen's committee, of which Wm. Warner Harper was chairman. The work of this committee was, it is to be regretted, limited by space accommodation. Leo Niessen, chairman of the committee on music, deserves great credit for the musical features provided. Arthur A. Niessen, as secretary of the local executive committee, is also to be congratulated on the successful carrying out of all the detailed work of that office. The National Flower Show Committee are also deeply grateful for the valuable services rendered by Daniel C. Donoghue, one of the leading attorneys of Philadelphia. Mr. Donoghue has a wide acquaintance with the florists of Philadelphia and vicinity, and is greatly interested in the work of all florists. Mr. Donoghue did not render any bill for his services, and our committee would recommend that the Society shows its appreciation of his work by appointing him attorney for the Society.

The details as to receipts from all sources, and the financial report of the show have been published, and each member present should be in possession of a copy of same.

Your committee was fortunate in having the support of the American Rose Society, American Carnation Society, and American Sweet Pea Society, all of whom directed the sections made up of their representative flowers, and added to the premium list of our Society with special prizes donated by members of their own bodies. The cooperation of these societies was greatly appreciated by your committee.

Subsequent to the show, the secretary met the treasurer and myself in Buffalo and went over all the accounts in regard to the show, in detail, and it was found that everything was correct, the accounts of the secretary and treasurer agreeing exactly. A full account as to disbursements, under date and voucher number, will be published in the Annual Report of the Society.

SEED TRADE

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending August 11, were recorded as follows:

Bulbs.—France, \$40,255; Netherlands, \$6,794; Bermuda, \$651; Hongkong, \$130.

Plants.—Belgium, \$383; Denmark, \$152; Netherlands, \$105; Bermuda, \$31; Brazil, \$21; Colombia, \$161.

Red clover seed.—France, \$3,281.

Clover seed.—France, \$6,553; Netherlands, \$4,500.

Grass seed.—Russia, \$17,361; New Zealand, \$5,955.

Other seeds.—France, \$1,774; British India, \$1,079; Hongkong, \$237; Japan, \$320; Morocco, \$7,723; Italy, \$882; Netherlands, \$675; Russia, \$9,301.

Nitrate of soda.—Chile, \$236,142.

Other fertilizers.—Scotland, \$138.

Notes.

Clarinda, Ia.—The A. A. Berry Seed Company has increased its capital stock from \$150,000 to \$300,000.

We learn from reliable sources that there will be probably a shortage of 50 per cent. on Roman hyacinth bulbs this season.

J. Henry Joyeux, field seed manager, and Claude B. Ramsey, advertising manager of J. Bolignano & Son, have just returned from a week-end trip, spent with Charles J. Bolignano at his mountain home near Mountain Lake Park, Md.

Of Interest to Retail Florists**FLORISTS' TELEGRAPH DELIVERY**

At the annual meeting of this association, held in Houston, Tex., on Wednesday, August 16, owing to the absence of President Irwin Bertermann Vice-President Gude presided. D. A. Brown was elected secretary pro tem. Trade conditions were discussed and the next meeting will be held in Chicago October 11 and 12.

The following officers were elected: William F. Gude, Washington, president; George Asmus, Chicago, vice-president; Albert Pochelon, Detroit, secretary; W. L. Rock, Kansas City, treasurer.

NEWS NOTES.

Detroit, Mich. — Philip Breitmeyer has just returned from his daughter's home in Montana, where his wife and he spent six weeks of Sundays. He says that while the easterners were suffocating with the heat they enjoyed a fair amount of cool breezes,—in fact, sometimes an overcoat was very comfortable.

Greenwood, Miss.—The home of Mrs. Edith Biddle was badly damaged by fire communicated from an adjoining estate, on July 26. Mrs. Biddle lost most of her roses, lilies, ferns, late asters, cannas, pot plants and shrubs and the loss is a calamity to her. We are sure that any donations of stock from generous friends in the trade would not be amiss and hope that this notice may be the means of inducing such.

NEWPORT SUMMER SHOW

The third mid-summer exhibition by the Newport Garden Club and the Newport Horticultural Society was held on the grounds of Hill Top Inn, Aug. 17, 18 and 19, with displays of plants, flowers, fruits and vegetables mainly from the greenhouses and private estates of Newport. The exhibition was opened by Gov. R. Livingston Beeckman making an address of welcome. Half the proceeds go to the Newport National Special Aid Society in their work for militiamen of Rhode Island on the border.

Arthur Herrington of Madison, served efficiently as manager of the show and the groups on the capacious lawn and under canvas were arranged with excellent effect. The judges were James Wilson, Natick, Mass.; John Duguid, Wellesley, Mass.; John Marshall, Providence, R. I.; Bruce Butterton, Newport, R. I.; C. M. Bugholt, and Andrew Meikle, Newport, R. I.

The summer residents exhibiting, and their gardeners, were Vincent Astor, James Boyd; Mrs. F. Mortimer Brooks, James Bond; Mrs. T. O. Richardson, James Robertson; Mr. Henry A. C. Taylor, William MacKay; Governor Beeckman, J. B. Urquhart; Mrs. French Vanderbilt, Daniel Hay; "The Reef Gardens, T. M. Davis estate, Victor May; Mrs. W. G. Weld, James Watt; Mrs. T. J. Emery, Andrew Dorward; J. B. Haggin, Dennis Foley; Mrs. William Grosvenor, James Mattson; Mrs. J. J. Wysong, Jas. G. Kyle; Miss Fannie Foster, C. M. Bugholt.

Out-of-town exhibitors were B. Hammond Tracy of Wenham, Mass., with beautiful gladioli; Raymond W. Swett, Saxonville, Mass., and George L. Stillman, Westerly, R. I.

There were 93 regular classes in the schedule, each as a rule carrying three prizes. We have not room to give the list of awards in detail. All of the above-mentioned exhibitors figured largely as winners, also the Wilson Nurseries with their specialties. Extra and special awards were made as follows:

Silver medal to C. M. Bugholt for Gladiolus, "Ridgeman," a white seedling of America. Also to the same the Grosvenor cup for the best novelty in the show.

Mrs. French Vanderbilt cup for best exhibit by private gardener, and Garden Club cup for best exhibit in show, were both awarded to Victor May for his 100 ft. group of foliage plants.

Jos. Manda sweepstakes for gardener winning most points and A. Richards sweepstakes for gardener winning most first prizes—both to James Bond.

First class certificate for *Nymphaea gigantea* and certificate of merit for *Nymphaeas* "Formosa" and "Attraction," all shown by Henry A. Dreer.

Honorable mention T. Sutton Tailor for Caladiums.

First class certificate—Emerson F. Bennett of Acushnet, Mass., for decorative Dahlia seedling.

Honorable mention and gratuity—James Brown, for educational and instructive exhibit of wild flowers.

Silver medal John Scheepers Co., Inc., New York, for trade exhibition of a group of Begonias.

Gratuity of \$5—Robert Clifford, gardener at Hill Top Inn, for two specimens of *Aucuba japonica*.

Honorable mention—Mrs. Slater for vase of Gladioli.

Silver medal—L. Merton Gage, Natick, Mass., for vase of Gladiolus, "Mrs. Dr. Norton."

First class certificate—H. E. Meader, Dover, N. H., for Gladiolus "Myrtle."

Honorable mention for Charles H. Totty for collection of seedling Delphiniums.

Honorable mention—Mrs. C. P. Smith, Middletown, for four vases Gladioli.

Honorable mention—W. A. Manda, South Orange, N. J., for collection of Caladiums.

Gratuity of \$5—C. W. Brown and Son, Ashland, Mass., for Gladioli, too late to stage.

William Gray, gardener for Mrs. William B. Leeds, won the Beeckman prize for the best floral decoration for not more than 12 covers, on the third and last day.

E. Hammond Tracy won the Rice prize and N. H. S. silver medal for display of Gladioli; George L. Stillman the same for display of Dahlias and H. A. Dreer the same for exhibit of Water Lilies.

Some of the exhibits which impressed us as meriting particular mention were the fine group of speciosum lilies in pots by D. A. Hay; crotons by Victor May; finely colored dracaenas in the group of ferns and foliage plants, also Rex begonias, by James Bond; group of lilies by Andrew Dorward; splendid gladiolus spikes by James Boyd; collection of summer flowering bulbs by James Watt, also grapes arranged for effect with montbretias and cosmos; water-lilies by H. A. Dreer and group of fancy caladiums by W. A. Manda.

Banquet.

On Thursday evening about fifty of the visiting gardeners and exhibitors were entertained at the Bellevue by Governor Beeckman, who made a spirited address which greatly pleased his guests. John B. Urquhart, president of the Newport Horticultural Society presided.

After the dinner President Urquhart called upon Messrs. Herrington, Tracy, Hayes, Sealey, Barkmore and

Holmes of the out-of-town guests and Secretary Fred P. Webber and Messrs. Andrew K. McMahon, Alexander MacLellan, James Bond and Victor May of the society. Each responded with a more or less brief speech of appreciation.

On Friday afternoon Mr. Herrington delivered a lecture on The Iris.

REFRESHING DAHLIA BLOOMS.

As the time approaches for dahlia exhibitions I am reminded of an experience I had once. Four days before a show in a neighboring town I picked an extra large blossom of the variety "Geisha" to compete for a prize for the largest flower in the hall. On the morning before the exhibition I found the flower wilted flat. I put it in hot water, almost to the boiling point, immersing the stem nearly to the flower, and left it to cool. The next morning it was standing up all right, and I carried it to the show, packed in a box, and set it up. It took first prize, and kept until the show was over, two days later.

A. J. FISH.

Massachusetts.

HEDGE OF THUYA OCCIDENTALIS.

The picture which fills our title page this week was taken in the grounds of George B. Dorr at Bar Harbor, Me. Everybody knows our American arborvitae and further comment is not called for here. Its adaptability for fine hedge purposes in the rigorous "down east" climate is well shown in this picture.

CATALOGUE RECEIVED.

William Elliott & Sons, New York. —Giant Flowering Bulbs and Seeds, for the Trade Only." Autumn 1916 edition, and it is "all right."

DAHLIA MRS. ALFRED I. DUPONT.

This new dahlia is one of the set of seedling novelties shown by W. A. Manda two years ago and is one of the finest of the recent dahlia introductions, its glowing color and long stems making it particularly desirable as a cut flower.

NEWS ITEMS FROM EVERYWHERE

CHICAGO.

Miss Mae Schultz, of J. A. Budlong's, is having a two weeks' vacation and Mrs. Schupp is a regular member of the office force during her absence.

Clarence H. Stuhldreher, of Mansfield, O., visited the growers here this week. Alex. C. Gardner returned with him to have charge of the retail store.

Aster growers have no difficulty in selling their high-grade stock for six cents and the money looks good with the coal bills not so far in the future.

O. A. Tonner and M. C. Gunterberg, Chicago's two lady wholesale florists, are away—the former in the cherry district of northern Wisconsin, the latter on the way from New Orleans to New York by boat.

C. H. Ketchum, of South Haven, Mich., who specializes in the growing of gladioli, is giving evidence that he understands the cultivating of that flower. He is one of the stockholders in the Chicago Flower Growers' Association and naturally much of his best stock is to be seen there. The spikes are very long and the flowers large and he keeps varieties limited to a comparatively few kinds.

The American Bulb Co. is the latest addition to Chicago's wholesale firms selling florists' necessities. Readers will please notice that the new company will be glad to quote prices on any of the accessories now carried by up-to-date florists, as well as on bulbs. The firm is composed of A. Miller, formerly member of the A. Henderson Co.; Albert Koehler, lately with Vaughan's Seed Store; Robt. Newcomb, former traveling salesman for the same firm, and San Seligman, who traveled many years for Wertheimer Bros. Two of the men have had their business training largely in Chicago and the others in the still larger field of traveling salesmen. Their foreign connections are such as will enable them to carry the best that can be produced. Vincent Neil, an-

other Vaughan graduate, will be associated with the firm at their office at 172 N. Wabash avenue.

WASHINGTON, D. C.

The new front for the store of William Marche & Co. is rapidly being completed. A formal opening is in prospect.

Painters and decorators have been at work at the store of J. H. Small & Sons and the entire interior has been gone over in preparation of a very busy fall and winter season. Other stores will soon follow suit.

The attention of the florists here has been directed to the fear expressed in New York that the spread of the paper box makers' strike may bring a famine for these containers. It is said that two-thirds of the workers in the industry already are on strike, and their leaders assert that shortly the entire paper box trade will be at a standstill.

A number of the employees of J. H. Small & Sons, are enjoying their annual vacations. James Dagleish is at Atlantic City, N. J. Edwin Teague has been staying in his bungalow on the Potomac and last week went up to Cumberland, Md. Mr. and Mrs. J. Henry Small, Jr., motored to Boston and Massachusetts beach resorts, also visiting New York and Phila. Miss Minnie E. Shea is at Atlantic City, N. J. Mr. and Mrs. Stanley Holland have just returned from a run to Philadelphia and Atlantic City.

PITTSBURGH.

Frederick J. L. James has purchased the John Doleman farm in Penn township with the intention of going into the wholesale floral business next spring. Mr. James is a son of Edward Shelton James, who has charge of the roof greenhouse for the Fort Pitt and William Penn Hotel, as well as supervising the Hotel Schenley grounds, and a nephew of Walter James, super-

intendent of the W. Henry R. Hilliard's city grounds and greenhouse.

Accompanied by Mrs. Burke, George W. Burke, Supt. of Parks, is on a motor trip in New England. George B. Telfair, with Mrs. Telfair, has returned from a three week's vacation trip in the south. Owing to the southern floods, Mr. Telfair found it necessary to abandon his automobile at Washington. Miss Catharine Friel, manager of Ray J. Daschbach is at Atlantic City where she will remain until after Labor Day. Carl Doelker has returned from a visit in Wheeling, W. Va. John Hoffman, Miss Mathilda Hammerschmidt and Edward J. Bambach, all employees for E. C. Ludwig Floral Co., have returned from vacations. Miss Bertha Hughes, a saleswoman for Randolph & McClements, is expected back today. Frank Misoelek and Dominick Piscioneri, assisting gardeners on the Charles D. Armstrong estate, have returned from three weeks' vacations, the latter at Albany and the former to New Rochelle, N. Y.

ST. LOUIS.

The Misses Guy, daughters of E. W. Guy, of Belleville, Ill., will leave on August 31 for Decatur, Ill., and Saginaw, Mich., to teach physical culture.

Nat Kingsley, Martin Seiger and Julius Schaeffer, of the Mullanphy Florists, are away for a two weeks' vacation. Tobe Teason, an employee of the firm, died last week and the employees sent a casket cover and served as pall bearers.

The Spring Flower Show Committee have decided to incorporate as the "St. Louis Flower Show Association." On the return of the paper from Jefferson City the preliminary lists will be mailed. The show will be held at Armory Hall, March, 1917, when a splendid outside exhibition can be made. W. W. Ohlweiler, secretary, is now in New York in interest of the show.

CUT FLOWERS

In writing to Advertisers kindly mention Horticulture

Flower Market Reports

The situation has changed very materially in this market since last week. Flowers of all seasonable kinds are coming in much more heavily and the wholesalers are well filled up with material for which there is a very light demand. Roses are increasing daily, gladioli and asters are a burden and there are many other things to help the stagnation, such as hydrangeas, calendulas, buddleias and dahlias. Lily of the valley is the only item that is short of the needs of the market and it brings stiff prices.

At this writing, Aug. 22, Chicago is having its first cool breeze for many days. With the unabated heat of many weeks, flowers have had a hard time and the only wonder is that there are any good ones in the market. Roses must of necessity be soft and inclined to open and cannot have the vitality of cooler days. Carnations from the new plants are short of stem and small and in many cases have little to recommend them. American Beauties from new plants are doing well and probably as many are being cut as the market requires at this season. For outdoor stock the two dependables are asters and gladioli and without these the market would be seriously crippled. Some few of the asters rank as first class stock and are seen with 27 and 30 inch stems and good heads while following these come a fair supply of lesser value and then comes the still large proportion of small, sunburned asters of no value where the individual flower is to be seen. Gladioli are fine and probably among the best of any August in their history. Local trade is quiet.

This market cannot be described as badly in need of flowers

any longer. The second crop of asters is now arriving in increasing quantities, and there are very heavy shipments of dahlias and gladioli daily. The difference in quality in all three of the aforementioned staples is very great and the prices vary accordingly. It certainly appears that there are more of the inferior quality stocks than of the better. Really fine flowers well grown and carefully handled and packed are decidedly in the minority. It is these that make the high price quotations possible and they are well worth the difference. Never before have we seen so many imperfect asters; half developed, one-sided and discolored, many of them are no better than rags. The same is true of gladioli. Roses are gradually attaining size and color and are bringing good prices for the season. Lily of the valley runs scarcer and scarcer and the price has more than doubled.

Interrogated as to business conditions, William A. Clarke of the Pittsburgh Cut Flower Company, replied: "They are just about in the same situation as the Christian in Politics, as depicted by the painfully

conscientious visitor to a religious brotherhood, when invited to speak on this subject: "Gentlemen, there aint none." Burning August skies with little relief through showers have played havoc with stock of all kinds and society, such as is in town, is not inclined in the way which makes for demands on the tradesmen. Exceptions should be made, however, on those firms which make a specialty of funeral work, which has kept up right along.

ST. LOUIS The wholesale market has been in very poor condition for the past month and the retailer has had a hard time getting enough good stock to fill orders. Prices are up on this stock. The long dry spell was broken the past week by good rains which should help outdoor stock to better quality and should increase the supply. There is very little going on among the retailers. Prices run along as usual.

WASHINGTON Conditions in Washington continue very quiet while the city is battling through the hottest week of the present summer. All flowers are showing the effects of

the heat and it is difficult in some lines to get top notch stock. Gladioli predominate, but it appears as though the season for these is waning and that the present supply is largely culls. Asters are more plentiful and dahlias have been offered in somewhat larger quantities. Hydrangea is being featured in many of the stores, but are in very little demand.

PUBLICATION RECEIVED.

We have received two booklets issued by the Federal Trade Commission at Washington, D. C., one dealing with the fundamentals of a cost system for manufacturers, and the other outlining a simple system of accounts for retail merchants. These booklets are being sent to manufacturers and merchants throughout the United States, and it is hoped that they will be read carefully and that the suggestions will be found helpful. In giving these documents space and special mention we feel sure we are doing something worth while for our subscribers, our advertisers, and the business men of the horticultural trade. Edward N. Hurley is vice-chairman of the Commission and copies may be obtained from him on request.

Obituary

Mrs. James M. Thorburn.

Mrs. Thorburn, widow of James M.
Thorburn, seedsman, died at Patch-
ogue, N. Y., on Wednesday, August 23.
Mrs. Thorburn had been in a very low
state of health for the past year. She
was in her 91st year.

PATRICK WELCH, WHOLESALE FLORIST

262 DEVONSHIRE STREET, BOSTON, MASS.

BOSTON.

State Forester Frank W. Rane is
busy distributing information concern-
ing the new tree disease, the white
pine blister rust. He offers the co-
operation of himself and his depart-
ment in assisting tree owners through-
out the state in preserving the forests.
Mr. Rane has sent out a circular letter
containing much information in addi-
tion to the foregoing; a pamphlet on
the white pine blister rust and an ap-
plication blank, which a tree owner
may fill out and send to Mr. Rane if
he wants the state to make an exami-
nation of his trees at a cost sufficient
to cover the traveling expenses of the
inspectors.

NEW YORK.

A. T. Boddington left on Monday,
21st, for a few days recreation at Bel-
fast, Me.

Peth & Duggan will open their new
seed store at 87 Barclay street on
September 1.

James M. Thornton & Co.'s seed
store was closed all day last Saturday
on account of the funeral of Mrs.
Thorburn.

New York seems natural once more
now that John Young is back at his
post again after one month's absence
in the South. Mr. Young is very much
elated over his experience in Texas.
He cannot speak too highly of Presi-
dent-elect Kerr's efficiency in the
work of organizing and carrying
through the local Convention details.
He says that HORTICULTURE's note
of approval in last week's issue was
well merited and not too strong.

The exhibition of gladioli at Bronx
Botanical Garden last Saturday was
very interesting. T. A. Havemeyer
showed a very extensive collection of
the best sorts, among them being many
new ones. John Lewis Childs was
also a large exhibitor, his display in-
cluding many of the new primulinus
hybrids. James Stuart staged a good
lot of hardy herbaceous flowers and
some fine buddleias. Bobbink & At-
kins showed their hybrid mallows and
the Botanic Garden was represented
by an interesting group of hardy her-
baceous flowers.

NEW YORK BRANCH, 8-10 Bridge St.

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage as regards prices and quality to place your order with us.

Soliciting your order through this ad cuts down the overhead selling expenses and you positively get lower prices and better quality. Our terms are liberal and are a guarantee that you get a square deal, all bulbs guaranteed true to name or money refunded.

Write us and upon request we will mail you our booklet giving prices f. o. b. New York or Chicago, and we also cheerfully furnish you with any information that may be desired. Those of our friends who will mail us a list of their requirements will find it has paid them to do so.

Awaiting to hear from you at your pleasure, we remain,
Yours very truly,

Westerbeek & Klyn.

Sassenheim, Holland.

Entries must be made to David Rust, Secretary, Penn. Horticultural Society, Phila.

CHAS. W. JOHNSON, Secretary.

LANCASTER COUNTY FLORISTS' CLUB.

A regular meeting of the club was held on the 10th, one week previous to our regular date. In order to be consistent and follow the calendar I am not reporting it until the proper time. This meeting was called for the mapping out of plans for the Flower Show, November 9, 10 and 11, and if the number of members present are any indication of the enthusiasm we will have for the show then its success is assured.

It was decided to make a great effort to get a large display from the amateurs and to this end special prizes will be offered for both out door stock and for that grown under glass. In the trade there will be no direct competition but several medals

COMING EXHIBITIONS.

Sept. 2-9, Cleveland.—Industrial Exposition and Fair, Edgewater Park.

Sept. 12-13, Providence, R. I.—Rhode Island Horticultural Society, Narragansett Hotel.

Sept. 11-16, Syracuse, N. Y.—Seventy-Sixth Annual New York State Fair.

and special prizes will be offered for the best collections, etc.

As half of the net proceeds are to be given toward the erection of an armory for Lancaster it is proposed to work up publicity along these lines and Albert M. Herr was delegated to attend to the publicity end of the show. Mr. Rosnosky for the H. F. Michell Co. gave us a few very useful pointers. T. J. Nolan, the other visitor at this meeting, remained diplomatically quiet when a question was read from the question box asking what influence the great increase of glass would have on the market next winter.

The writer suggested that we arrange for a trip to Whitmarsh, Md., to see our friend Richard Vincent, Jr. and his establishment and it was decided to leave the arrangement for the trip to the maker of the suggestion and to make a more complete report at the next meeting. This trip will be by automobile if enough machines can be secured, or by train if unable to secure enough machines. Ira Landis displayed some beautiful gladioli at this meeting. This exhibition end of our meetings is falling down and should be looked after as it adds 40 per cent to a meeting to know that you are going to see some new stock or to see some old stock especially well done.

A. M. HERR.

SEWICKLEY HORTICULTURAL SOCIETY.

The monthly meeting of this society was held at Wessenauer's Flower Store Monday, Aug. 14, with a good attendance. A hall at 504 Broad street having been engaged the society in the future will meet on the second Tuesday of each month at above address. The constitution and by-laws were drawn up and passed on. The members unanimously agreed to stage an exhibition of flowers, fruits and vegetables on Friday and Saturday, Sept. 22 and 23. Mr. Wessenauer has placed his show and greenhouse at the disposal of the Society for this event and it is to be hoped the members will seize this opportunity to show the people of Sewickley samples of their skill. It was also agreed to hold a picnic on Wednesday afternoon, Aug. 30. Excellent progress is being made by this Society and a large number of new members is looked for at the next meeting.

M. CURRAN, Secy.

LADIES' SOCIETY OF AMERICAN FLORISTS.

The Ladies Society of American Florists held their annual meeting in the parlors of the Rice Hotel, Houston, on Wednesday, August 16.

The second vice-president, Mrs. R. C. Kerr, of Houston, presided in the absence of the president, Mrs. John Vallance, of Oakland, Calif., who sent a letter of regret. The first vice-president, Mrs. W. W. Coles, of Kokoma, Ind., was not present. In the absence of Mrs. George Smith, of Cleveland, Miss Pearl B. Fulmer, of Des Moines, Iowa, was elected secretary *pro tem*, and read letters of regret from Mrs. Smith who could not attend because of the illness of her husband. Mrs. A. M. Herr, Lancaster, Pa., treasurer, was not in attendance because she was unable to take so long a trip. Minutes were read and approved. Treasurer's report was read and approved. The election of officers resulted as follows:

President, Miss Pearl B. Fulmer, Des Moines, Iowa; first vice-president, Mrs. R. C. Kerr, Houston, Tex.; second vice-president, Mrs. Julius Roehrs, Rutherford, N. J.; secretary, Mrs. Chas. H. Maynard, Akron, O.; treasurer, Mrs. A. M. Herr, Lancaster, Pa.; directors: Mrs. Joseph A. Manda, New Jersey; Mrs. J. F. Wilcox, Iowa; Mrs. George H. Cooke, Washington, D. C.; Mrs. J. G. Hancock, Illinois; Mrs. Fred Howard, California; Mrs. Patrick Welch, Massachusetts.

FLORISTS ARE INVITED TO CLEVELAND.

We desire to extend an invitation to all Florists in the central states to come to Cleveland between September 2nd and 9th to see the First Early Fall Open Air Flower Show ever staged in Cleveland.

This being about the last week before the actual Fall season begins for retailers, as well as growers and wholesalers, we look for a large attendance from western New York, Pennsylvania, Michigan, Indiana and all of Ohio.

We call to the attention of every one the pleasant triangle water trip taking in Cleveland, Detroit and Buffalo, being three nights on the water and spending as much time as you desire in each of these live lake cities.

In addition to the Flower Show we offer some thrilling attractions, among them being Miss Marjorie Stinson, 19-year-old girl aviator, who will fly twice each day. A 23-act Open Air Hippodrome filled with thrills. A fine exhibit of live stock from O. C. Barber's famous "Anna Dean" Farm, valued at \$100,000. Seven Industrial Shows in addition to the Flower Show Section.

This will really be the biggest event Cleveland has seen for a long time. We want you to come. We will look for you. Make up a party and take this last jaunt of the season.

(Signed) The Entire Committee: Frank A. Friedley, H. P. Knoble, Chris. B. Wilhelmy, E. A. Bause, O. P. Blackman, Geo. Jacques, Robert Weeks, Timothy Smith, Chairman.

GLADIOLUS SOCIETY OF OHIO.

The Fourth Exhibition and Flower Show of this Society was held in the Assembly rooms of the Hollenden Hotel, Cleveland, O., on Friday and Saturday, Aug. 18-19. The season has been in many ways a most unfavorable one, and the growers were prepared for a scanty exhibit, but were very agreeably surprised at the showing of splendid gladioli that graced the benches. While not equal in magnitude or numbers to that of last year, it was quite as good as that of two years ago, which all remember as a very gratifying success. Many fine displays were made, and probably the most striking feature of the exhibits was the fine new varieties and seedlings which indicate the spirit of progress in this line. The list of awards is given below:

Best vase Red, James F. Rychlik; 2d, same. Best vase of Pink, Guy Bate; 2d, Madison Cooper. Best vase White, James F. Rychlik; 2d, Madison Cooper. Best vase Yellow, James F. Rychlik; 2d, Madison Cooper. Best vase any other color, James F. Rychlik; 2d, Nag-ir-roc Gardens.

Most Meritorious Display, Munsell & Harvey; 2d, Mrs. R. E. Huntington. Best vase, fifty spikes, Mrs. R. E. Huntington. Best new seedling not yet disseminated, Joe Coleman; 2d, Joe Coleman. Society's Certificate of Merit, Munsell & Harvey. Best vase any color, James F. Rychlik; 2d, Bidwell & Fobes. Best vase Glory, Bidwell & Fobes. Best Primulins Hybrids, Madison Cooper; 2d, Nag-ir-roc Gardens. Best vase any Red variety, James F. Rychlik. Best new White or Light Seedling, Munsell & Harvey. Most meritorious Gladiolus never before shown here, Joe Coleman.

The Silver Cups were won by Joe Coleman and James F. Rychlik.

Owing to the difficulty of securing a quorum, the business meeting and election of officers was postponed to a called meeting in the future. The table decorations by The Jones, Russell Co., The J. M. Gasser Co., and Knoble Brothers were very effective and pleasing. Also the basket displays of Knoble Brothers, Paul Hahn, A. M. Albrecht and Ernest Wilhelmy were given special notice by the judges, though not entered for competition. Altogether the exhibition was very satisfactory and with a balance in the treasury the society is encouraged to continue its work.

WILBUR A. CHRISTY.
Sec'y and Treas.

THE "INTERNATIONAL" FOR 1917.

The first preliminary schedule of the International Flower Show at New York, to be held on March 16-23, 1917, has been sent out this week. As heretofore, the exhibition will be held under the auspices of the Horticultural Society of New York and the New York Florists' Club. There are some stunning prizes in all the classes. One of the first things John Young jumped into on his return from Houston was the active work on this big affair, and he found President Havemeyer ready and waiting for him. Clear the track.

wonder and together with Louis Shaef-fer, chairman of entertainment makes a combination hard to equal. President Tom Tracey made an intrepid head waiter, and his brother, Ed. Tracey, as caretaker and purveyor for the ladies took to his job as a duck takes to water. Frank Conly, of The Rosary, was the chief dispenser of soda water and accordingly popular, but the bright star was F. A. Danker, treasurer, who kept his eye and his fingers on the money. Robert Davison, secretary, made a record as a phenomenal eater, and R. J. Irwin and wife, who were visitors from New York, experienced the surprise of their life. Another visitor who took in all there was to enjoy was Jas. Sneider, violet grower of Rhinebeck. There

"Big Stock" respectively. The "Big Stock" nine proved true to name, taking the "Ornamentals" into camp to the tune of 20 to 9, owing, perhaps, to their refusal to "be out" until four batters were retired. The ball game between the Lady Nines proved very interesting and the score will not be published—for lack of space.

Dinner was served by the Park Management, after which the amusements of the Park were enjoyed, shop talked, and everyone voted it one of the most enjoyable outings the Association ever held, and all look forward to the one next year.

Florists**

(Continued from page 280)

**LUNCHEON WITH HOUSTON
ROTARY CLUB.**

A pleasing courtesy extended to the visiting florists was the luncheon tendered them by the Houston Rotary Club at their regular weekly dinner, Thursday noon, August 17th. President-elect Kerr being a prominent member of the Rotary Club it was a joint courtesy to him as well as to the visiting florists that this invitation was extended. A most enjoyable time was had. After the tables had been cleared and the inviting menu disposed of, the retiring President of the club invited attention, and said that as an addition to the usual roll-call each member and visiting florist would be asked to rise in turn, announce his name and state his favorite flower. There were some 100 members of the Rotary Club and 110 visiting florists in attendance, and out of these 52 answered that they preferred the rose, giving various varieties, led by the American Beauty. For the rest there was an amazing variety of choice.

Speeches were made by a number of visitors, the first on the list being George Asmus who handed to Vice-President Kerr the \$150 in gold which he had won by securing the largest number of new members for the S. A. F. during the past year, 83 new members having been credited to his efforts. W. F. Gude followed with some animated remarks and President MacRorie made the closing speech with characteristic cordiality.

We learn that the trade exhibitors who took a business chance and went to Houston made a very gratifying record. Florists' supply men and greenhouse builders all did a fine business. M. C. Wright who represented Lord & Burnham Company took several good orders for new construction. We have yet to hear of one exhibitor who was dissatisfied.

PERSONAL.

Harold L. Chadwick, florist, of Houlton, Me., and Miss Nell M. Johnston, were married at the home of the bride, Cambridge, Ohio, on August 2d.

Montague Free, of the Brooklyn Botanical Garden, and Miss Violette Caroline Thayer, of Brooklyn, N. Y., were married on Tuesday, August 22.

Harry A. Barnard, representative of Stuart Low & Co., of Bush Hill Park, England, is on his way, on the S. S. Adriatic, to again visit his many business friends on this side of the Atlantic. He is due to arrive in New York about September 1 and thereafter may be found or addressed at the Hotel Albert, New York City.

Box 9, National Union Building
Washington, D. C.

A RANGE of full iron frame curved eave Jacobs' greenhouses of an elaborate and decorative design, are now under construction on the estate of J. Insley Blair, at Tuxedo Park, New York.

The specifications by Carrere & Hastings, the architects, called for the very best and most modern equipment. The range, which is so designed that most any flower or plant can be grown, will be heated throughout by hot water and steam with vapor system. It will have both hot and cold water irrigation; also a liquid fertilizing system. Jacobs' construction, material, workmanship, responsibility and price, were the main factors in our securing the contract.

**No Job Is Too Large Or Too
Small For Us To Go After**

**WE KNOW WHAT TO DO
AND WHAT NOT TO DO**

What's more we can save money
for you

S. Jacobs & Sons

Greenhouse Builders

1359-1385 Flushing Avenue
BROOKLYN, N. Y.

HOTBED SASH at 75c. each
Made of best grade Gulf cypress.

Glazed Hotbed Sash from \$1.65 up.
Double Light Sash up to \$4.00.

We carry a large stock of all sizes.
Write us for estimate.

S. JACOBS & SONS
1359-1385 Flushing Avenue BROOKLYN, N. Y.

Will last a life-time.

\$1.25 EACH

Adjustable—can and frame separate—easily cleaned. Frame all one piece, of malleable iron. More practical and more easily operated than any other.

Seal-tight liquid putty at \$1.25 per gallon.
METROPOLITAN MATERIAL CO.
1292-1414 Metropolitan Ave., Brooklyn, N. Y.

Evans 20th Century Arm
Most up-to-date arm on the market. Proof that it is better than any other is that others tried to imitate it. Write for our 1916 catalog just out.

Jakobsen Floral Co., Build More Half Iron Frame Houses

IF you know Mr. Jakobsen, you know he knows the difference between being a hustler and thinking he is a hustler; and being a hustler and having no use for a hustler.

Jakobsen is a hustler—the kind that takes off his coat and jumps right into the work, just as if it was the jolliest, most picnic-like thing that ever happened.

You can't stop such men; because they never stop short of success; and then they don't stop; but keep on building a larger success.

Mr. Jakobsen started with one of our Half Iron

Frame houses, and is adding to his range as success permits.

The company has ample land for the many future houses that are bound to come. Space there is for some good husky Iron Frame ones.

The present ones are the best, next to the Iron Frame, that money buys.

Our 30 year old bolted-through-and-through-fittings, are used on all columns and cross ties.

Next year building costs won't be any lower—looks as if they would be higher. Now's the time to build.

You know we go anywhere to talk business. Or do business.

The Glory Fern (*Adiantum Farleyense Gloriosa*)

Adiantum Farleyense Gloriosa

THE GLORY FERN or RUHM VON MORDRECHT

This splendid Fern which so closely resembles *Adiantum Farleyense* in appearance and which does not require the special skill and care in growing that is necessary to produce good plants of *A. Farleyense*, has quickly made a place for itself not only on account of the fact that it can be produced for little over half that of growing *Farleyense*, but also because either in a cut state or as plants used in decorative work, it will outlast the old variety ten to one, making it an available subject where *Farleyense* can not be used at all. Since its introduction some 5 or 6 years ago there has never been a supply large enough to meet the demand. With this in mind we have prepared this season an extra large stock, which is in prime condition and we now offer select

3 inch pots, \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000
4 inch pots, \$3.50 per doz.; \$25.00 per 100

For a Complete list of seasonable stock see our current Wholesale List.

The above offer is intended for the trade only.

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toll, we ought to blame the culture, not the soil."—*Pope*

Ardisia crenulata

A careless hand at watering will quickly do lots of damage among the ardisias. Examine each pot carefully and only water where it is really needed. Any excess will cause loss of foliage even more quickly than an insufficient supply. The plants should be elevated so that they can get all possible light, and plenty of ventilation. In applying stimulants also use great care, for too much will color up plants with pale foliage. Do not crowd them. A good syringing early in the morning will help to keep them clean. Once in a while you may have to go over them with a sponge, using some good insecticide. Give all the sun they will stand without burning. This helps both berries and foliage to have high coloring.

Pansies for Winter Flowering

Pansies that were sown early in July will make fine plants to bench in a cool house. At about 45 degrees at night they will bloom all winter. These young seedlings may be planted in a frame that has been enriched and some leaf mold and sand added. Give them about 6 inches apart each way; they can stay here until October when they can be moved into winter quarters. When planting in the house give them 6-inch in the rows and about 8 inches between the rows. They like a compost of fibrous loam four parts, cow manure two parts and leaf mold one part. Keep moist at the roots and syringe two or three times a week. Be careful about ventilation and see that they have it in plenty. Do not ever attempt to force them into flower by extra heat. Keep clear of fly by light fumigation every 10 days.

Pompon Dahlias for Christmas

These plants make quite a novelty around the holidays. It is well to try your luck in flowering them for that date. Cuttings that were taken during June and grown on can be plunged in a frame where they will be handy for watering and syringing. They can have a couple of pinchings to make them bushy. They will flower well in 5, 6 or 7-inch pots. About the middle of September they can be given a light bench where the night temperature runs from 50 to 55 degrees and about 70 degrees by day. Keep them clean by light fumigation. When they begin to show bud they can have a little manure water once a week until they show color. Keep them tied to small stakes. They like a compost of fibrous loam four parts, cow manure two parts, leaf mold one part.

Schizanthus Wisetonensis

This is a very charming annual to grow during the winter for either a pot plant or cut flowers. Now is a good time to sow for winter. Mix a compost of loam, leaf mold and sand and fill the pans to within an inch of the top. Keep them shaded until the plants begin to show enough through the surface, but after that they will stand all the sun they can get. When they can be handled they should be potted in 2-inch pots and shift ahead afterwards as they may need it. From a 6 up to an 8-inch pot will do to flower them in. Pinch frequently so as to form bushy plants. For the last two or three shifts give them a compost of fibrous loam three parts, well rotted manure two parts, with a little sand. When they have filled the pots with roots they will take plenty of water. They will grow well in a night temperature of 45 to 48, with 10 to 15 degrees higher during bright weather.

Swainsona

Florists who have a lot of make-up work can use these flowers well. The bloom should be cut when all the flowers are nearly full out and placed in water in some cool light place for 8 or 10 hours. When these plants get pot-bound they will show flower and keep on blooming with great persistency. At this stage they should have some liquid manure about once a week. They root easily from now on, so if cuttings are put in now and grown along without check, they will make nice flowering plants in 5 or 6-inch pots by next spring. When well-rooted they should be potted into 2 or 3-inch pots and kept shaded for a few days until well established. Toward the last shifts use rich soil. They can be potted out on a bench at about 50 to 55 degrees during the night. Give plenty of ventilation without drafts.

Reminders

House winter-flowering geraniums as they do better in the house after this date.

Cutting of nearly all perennial vines strike freely now, especially the various kinds of ampelopsis.

Put in a good batch of cuttings of variegated vincas, as they are always in good demand during the spring.

Fire heat will now be needed in some of the houses, so see that everything is in readiness before the very cool spell arrives.

Next Week:—*Euphorbia jacquinaeflora*; *Lilium multiflorum*; *Mignonette*; *Orchids*; *Phlox*; *Reminders*.

September cheer

Here comes September, the advance courier of the new season, pregnant with the cheering promise of awakening business activity, inspiring high hopes and stirring all to enthusiasm and laudable ambition. In common with the patrons whose interests we live to serve and whose welfare is so knit into our own, HORTICULTURE, too, looks forward to the season now about to open, with eager confidence and earnest purpose to improve and advance in everything which goes to make up a trade journal of the first class. To this end we respectfully solicit the willing help and support of the trade, for we cannot do it all alone. With such co-

operation assured the resultant prosperity will be mutual. There is plenty of good business ahead for everybody who will go after it in the right way—and "the right way" includes, as an essential, a well-planned publicity campaign through the medium of HORTICULTURE.

Convention garden shortcomings

Superintendent Brock in speaking of his experience in perfecting the Convention Garden, said that to make it a success more time should be given to the preparation of the Garden, two seasons being necessary to properly develop it and produce shrubbery of sufficient size and growth so that finished results could be shown at the date of the convention. This fact was also plainly in evidence in the Boston convention when the difficulties met were really insurmountable owing to the additional hindrance of a cold wet spring. This was the occasion of the original suggestion by HORTICULTURE which has now been adopted by the S. A. F. that the location of the convention should be selected two years in advance if the Convention Garden is ever to be a creditable piece of work. Mr. Brock, however, says that the installation of the Convention Garden in Houston caused many people to visit the park who had never before visited it and thus a healthy interest in park improvement and home beautifying has been created, the trade has already felt the impulse in the call for more and better plants, and so the Garden, notwithstanding all the drawbacks, did in a measure accomplish its purpose.

The month of fairs

September is the big month for "fairs." Unfortunately and, we believe, unwisely for the trade as well as for the fairs, the horticultural department of these popular institutions is seldom more than a joke and it would be a relief to the mind of the self-respecting horticulturist visiting such if the flower section as usually seen were abolished entirely. And yet there is no good reason why these affairs might not be turned to as good profit proportionately for the florist, plantsman and seedsman as for the numerous other industries that do find them beneficial. It is gratifying, therefore, to see that efforts are being made in various places by the local horticultural people to develop in a progressive and dignified manner the horticultural end of these annual enterprises. The Rochester, N. Y., Industrial Exposition, a "fair" under another name, which opens next Monday is one instance; the New York State Fair scheduled to open at Syracuse on the following Monday, September 11, is another. Especially would we commend the Industrial Exposition and Fair at Cleveland, Ohio, running for one week from Saturday, September 2, in which a supreme effort is being made to induce the flower growers, gardeners and floral artists to take a leading part. Liberal prizes are offered and we hope and believe that this attempt will be a success. There are a score or more county and sectional fairs of considerable importance throughout New York State and New England especially where similar activity would be a wise move. One or a few exhibitors, however well they may do, cannot possibly bring up any department to a proper level. There must be a general interest and a general co-operation and as soon as this is under way the rest will always be easy. If the premiums offered are considered inadequate the sure remedy lies in making the department such a popular success and drawing feature that its importance will command recognition. When this stage has been reached the management will not be backward in coming forward with "the dough."

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur C. Ruzicka

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Ruzicka. Such communications should invariably be addressed to the office of HORTICULTURE.

Fumigation

Now that there is a cool night now and then, growers should not neglect to clean out any fly that may have got in here and there in spite of careful spraying or light smoking. For this purpose we find nothing better than some of the tobacco papers advertised in HORTICULTURE. When carefully done, the smoke will get in under the plants where it is hard to spray and will get out any fly that may happen to be there. A light, quick syringing following the fumigation will help clean out the remainder, as there will be many of the old ones that will not be killed but merely made sick, and if these can be knocked off the plants and under the bench they are sure to perish as they will not have energy enough to crawl back. There should be no weeds or anything under the benches that will house them for then they are sure to get back to the plants later, as a certain number are gifted with wings which they do not hesitate to use the first chance they get. If there are very many of the pests it will be well to smoke the house again the following night if conditions are right. This means that the temperature should be below 70 degrees F. and the plants plenty wet enough at the root. It is best to fumigate on a quiet night as the smoke will go through the house better than it would on a windy night. With old leaky houses it is best to smoke on rainy days or nights as all air crevices and cracks in broken glass will be full of water and the fumigation will be much more effective. Tobacco stems can be used where time will permit, and when used right with good stems the work will be equally effective. It is not a very pleasant task though and great care must be taken to see that the stems do not burn with a flame as the smoke would be very hot then and would surely burn the plants. It is not a good idea to have the stems too wet, as the smoke will then be weak because it will be about half steam. Just wet them enough to keep them from burning with a flame. It will be necessary to prepare the stems at least two hours ahead of the time they are to be used. The water will then have plenty of chance to work through the stems so that they will be moist all the way through yet not wet. When using stems a large smoke pot made for the purpose should be used and this can be pulled through the house, filling it up properly. We get best results by going through first filling the house about half, and then coming back through and filling it up proper. This gives us a chance to see air pockets and judge the way the smoke will behave. The house can be filled much

more evenly this way, as it is quite a proposition to begin and fill the house right up from the one end. If many houses are to be done it is best not to use the same pot all the time, as it is bound to get too hot and not work right. One hour's use is the limit for one pot, after which a fresh one should be started. It will work better, give denser and cooler smoke and be more satisfactory all the way around.

Those Annoying Spiders

No, it will not be red spider that we refer to this time. It will be real spiders, those that have a habit of stretching cobwebs at night across the walks, that catch the grower's face in the morning when he comes around to cut his roses. These spiders do no harm to the roses that we can see, but are very annoying for reason already stated. We discovered a way to get rid of this, quite by accident, but it seems to do the work and it certainly is much more pleasant to cut and carry an armful of roses without having to stop to brush the cobwebs from the face. We find a little fine bone-meal dusted over the plants with a pair of bellows will drive the spider away, and the webs will disappear almost as soon as it is applied. The stronger the smell of the bone, the more effective it will be. Needless to say, the bone should not be applied so that the plants are covered thickly, but apply just a slight dusting.

Grasshoppers and Caterpillars

With the side air open occasionally, there will be a number of grasshoppers getting in and these are very far from being an asset. See that the boys get them whenever they are cutting, watering or scratching. Never stop until the one that you see is dead. They will eat off the finest of the buds and in this manner do far much more damage than one would think. Another pest is a tiny caterpillar that eats out the under side of the leaves. Hand picking is the only thing that will get rid of these and if growers will keep their eyes open when cutting or disbudding there need not be very many around. They seldom operate singly, for the eggs are laid by some moth or butterfly in a bunch and there is generally a whole colony of the pests under the leaf and then when that leaf is eaten off they are ready to start on the next one. It is hard to reach them with poison as they do not take the whole leaf, but just the cells under the protecting top shell. There are also worms that bore into the stalk and many of the finest shoots are sometimes affected. The wide-awake grower will have his eye on this, and as soon as any suspicious looking shoot appears it is taken off at once and burned. A good idea, too, is to catch and kill and burn all butterflies and other insects that get into the houses and cannot find their way out. We say burn them because it often happens that there will be a lot of eggs ready to be laid, and if the insect is not burned these eggs will hatch just the same. Do away with them good and proper.

CLUBS AND SOCIETIES

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTICULTURISTS.

Meeting of the Executive Board.

The Executive Board in session at Houston, Texas, August 17th, passed the following recommendation:

Recommending the "Changing of the convention date providing The National Flower Show is held in the spring in 1918 in St. Louis, Missouri. Definite action on this recommendation to be taken at the Mid-Lent meeting of the Executive Board to be held in New York."

JOHN YOUNG, Sec'y.

Report of Committee on Publicity.

By Irwin Bertermann.

In view of the impossibility of holding a majority committee meeting at Philadelphia or since that time, the chairman wishes to submit the following: Mr. J. H. Pepper was engaged under the supervision of Mr. Young, Sec. as per the instructions of the directors of the Society of American Florists. Mr. Pepper wrote and disseminated numerous articles for Mother's Day, Memorial Day and for special features such as new roses, carnations and other meritorious commodities. These were distributed to the leading papers of the country and responses from the editors showed that a great many of them were being used. It soon became evident to the chairman of the committee that as the matter of publicity was such a big undertaking, it was better to go slowly and not waste any funds of the parent organization. Mr. Pepper submitted numerous plans for national advertising but as many of them were necessarily expensive it was deemed best to submit the whole thing to the committee once more for maturity. The start that has been made by our national body is certainly along good lines. There cannot be too much publicity or too much thought given this important topic but the amount spent must compare with the returns gained therefrom. Of course every particular line of business thinks it ought to be exploited directly but is it not true that if any one line is exploited, the others are sure to benefit in proportion? Many retailers in particular have expressed a desire for national advertising and are willing to contribute to a fund for this purpose. Mr. Pochelon, Secretary of the Florists Telegraph Delivery is at this time endeavoring to raise a special fund for advertising. Would it not be best for the S. A. F. to cooperate with the Florists' Telegraph Delivery and each of them devote a certain amount, say fifteen hundred to two thousand dollars for a common purpose? There is much doubt as to the advisability of direct advertising, as the expense is too great, but an unlimited amount of good can be accom-

plished by a central bureau such as has been undertaken in a small way which would co-operate with the Florists' Clubs of the country, with the individuals of the S. A. F. & O. H. and with the editors of the leading papers for indirect advertising. The chairman, at the request of President Welch, undertook the work simply for a start. He mentioned at that time that he would only undertake the same for a limited period and as it is impossible for him to devote the proper amount of attention, he begs leave to have someone else appointed in his place as chairman, but is perfectly willing to do his smaller part as a member of the committee.

The amount spent—\$190.00—is well accounted for in the matter of publicity received and accounted for by Mr. Pepper.

A CORRECTION.

Secretary Young informs us that the date of the next International Flower Show, to be held at the Grand Central Palace, New York, was mentioned in the first Preliminary Schedule as March 16th to 23rd. This is an error. The correct dates of the coming exhibition are March 15th to 22nd.

MASSACHUSETTS HORTICULTURAL SOCIETY.

Children's Garden Exhibition.

The annual exhibition of the products of children's gardens, conducted by the Massachusetts Horticultural Society, will be held at Horticultural Hall, Boston, Saturday and Sunday, September 2 and 3. This exhibition is one of the most interesting of the horticultural events of the year and will show the progress made in the encouragement of gardening among the children of the commonwealth in recent years. Numerous school gardens as well as private home gardens in eastern Massachusetts will be represented with the flowers and vegetables grown by the young gardeners. Prizes to the amount of \$350 will be distributed to the exhibitors. The exhibition is free and will be open Saturday from 12 to 6 and Sunday from 1 to 6 o'clock.

Gladiolus Mrs. Dr. Norton Wins Silver Medal.

On Saturday, August 26, L. Merton Gage, of Natick, Mass., exhibited at Horticultural Hall a vase of the new Kunderd seedling gladiolus Mrs. Dr. Norton. It is a magnificent flower of a delicate pink tint shading into yellow and so much impressed the committee on plants and flowers that they awarded it a silver medal.

CLUB AND SOCIETY NOTES.

The third annual exhibition of the Gardeners' Union of Bangor, Me., was held this week in the City Hall. There were over 100 exhibitors.

The Florists' Club of Washington, D. C., will hold its regular monthly meeting at 1214 F street, Northwest, on Tuesday evening, September 5.

The St. Louis Florists' Association held on August 21 one of the largest meetings the association ever had. The membership committee expects by the next meeting to have a membership of seventy-five.

The Rochester (N. Y.) Exposition opens on Monday, September 4, and continues through the week. The Flower Section comes under Department E. and judging will commence at 1.30 P. M. on Monday.

The annual exhibition of the Andover (Mass.) Florists' and Gardeners' Club will be held in the town hall on September 8 and 9. G. D. Millet, George Piddington, J. H. Playdon and other florists of Andover and neighboring towns are active in promoting the show.

The Worcester County (Mass.) Horticultural Society had an extensive gladiolus show on August 24. Among the prominent exhibitors were R. W. Swett of Saxonville, L. Merton Gage of Natick, S. E. Spencer of Woburn, Montague Chamberlain of Millbury and Allen Jenkins, gardener at Irithorpe, Shrewsbury, Mass.

The exhibition of the Gardeners' Union at City Hall, Lewiston, Me.,

last week was the best up to date. Amateurs largely predominated but nice exhibits were staked by George M. Roak Co., Auburn, Me., ferns, celosias, etc.; Thomas Cogger, Melrose, Mass., gladioli; Fottler, Fiske, Rawson Company, Boston, dahlias; Horne & Noyes, Lewiston, gladioli, and others. Ernest Saunders and Hugh Roak acted as judges.

CLEVELAND'S BIG SHOW.

At the end of this week, September 2nd, comes the opening of the Big Event that has been announced several times previously in our columns.

This will be the first early fall flower show ever held in Cleveland. It is one of the feature sections of the Industrial Exposition and Fair. It is announced as the biggest civic event ever staged in Cleveland.

A. B. Blackburn, superintendent of

M. A. VINSON

Manager, Cleveland Flower Show.

the W. S. Tyler White Side Farms, has made a large entry of out-door plants as well as palms and ferns. He will also enter heavy in the vegetable section.

Robert Weeks, superintendent of the A. F. Holden estate, is planning on making a very good showing.

E. A. Bause, superintendent of the J. W. Corrigan estate, Wickliffe, Ohio, will have a vast display. Mr. Bause will also have a feature exhibit of eight aquariums of rare fish.

Decorated tables of both retailers and private gardeners will form one of the interesting features of the week, together with baskets, bridal bouquets, etc., and other forms of display.

Timothy Smith, Chairman of the Flower Show Committee, thinks that the Cleveland public will respond to this and there will be much good come from it to the entire florist industry of Cleveland.

Cleveland men are expecting to entertain a large number of their friends among the trades from distant points.

This Show will be well worth seeing.

Coming Exhibitions

Sept. 4-9, Rochester, N. Y.—Flower show in connection with the exposition.

Sept. 6, Amherst, Mass.—Field Day for Market Gardeners at the Agricultural College.

Sept. 7-8, Florence, N. Y.—Floral and Vegetable Carnival.

Sept. 9-10, Boston, N. J.—Dahlia and Fruit Exhibition, Massachusetts Horticultural Society, Horticultural Hall.

Sept. 11-16, Louisville, Ky.—Kentucky State Fair.

Sept. 13-14, New Haven, Conn.—Eighty-fourth Annual Exposition of New Haven County Horticultural Society in Republican Hall.

Sept. 18, Orange, N. J.—Dahlia and Horticultural exhibitions of the New Jersey Floricultural Society.

Sept. 22-23, Paterson, N. J.—Fifth annual Fall flower show of New Jersey Floricultural Society at Young Men's Christian Association Hall.

Sept. 23, Maplewood, N. J.—Second annual Dahlia exhibition.

Sept. 26-28, New York, N. Y.—Amer. Dahlia Soc.'s annual show, in Engineering Bldg., 25 W. 39th St.

Sept. 26-29, Chicago.—Vegetable Growers' Association, Hotel La Salle. Annual Convention and Trade Exhibit.

Oct. 7-8, Boston.—October Fruit and Vegetable Exhibition, Massachusetts Horticultural Society, Horticultural Hall.

Oct. 10-12, New Orleans, La.—Eighteenth Annual Convention American Association of Park Superintendents.

Oct. 26-27, Madison, N. J.—Twentieth Annual Flower Show, Morris County Gardeners' and Florists' Society, James Assembly Hall.

Oct. 27-29, Mount Kisco, N. Y.—Fall show of the Northern Westchester County Hort. and Agri. Soc.

Oct. 31-Nov. 1, Greenwich, Conn.—Fall Flower, Fruit and Vegetable Show of the Westchester and Fairfield Horticultural Society.

Nov. 1-5, Boston.—Grand Autumn Exhibition of Plants, Flowers, Fruits and Vegetables, Massachusetts Horticultural Society, Horticultural Hall.

Nov. 1 to 3, Tarrytown, N. Y.—Chrysanthemum show of the Tarrytown Hort. Soc. in Music Hall.

Nov. 8-10, New York.—Annual Chrysanthemum show of the American Institute, Engineering Society Bldg., 25-33 W. 39th St., New York.

Nov. 9-11, Lancaster, Pa.—Fall flower show.

Nov. 9-12, New York.—Fall exhibit Horticultural Society of New York at Museum of Natural History.

Nov. 11-19, New Orleans, La.—Flower show.

Nov. 14-15, Providence, R. I.—Flower show of R. I. Hort. Soc.

DURING RECESS.

St. Louis County Growers.

The County Growers' Association held its third annual outing last week at Little Creve Coeur Lake with large attendance and the weather "made to order." The committee had provided a good program of games and a fun band, all members of the association. The prizes for the games were beautiful and useful. The officers of the association from President Winter down worked hard to make things enjoyable for all.

SOME NOTABLE CONVENTION GARDEN EXHIBITS.

At the Henry A. Dreer's garden Hungarian Pink looked exceptionally fine. Schoppenhauer, a red and yellow striped canna, attracted much notice. The most beautiful exhibit in the entire garden was Dreer's aquatic display.

Conard & Jones showed ten varieties of cannas, of which the City of Portland, a salmon pink, was pronounced the greatest attraction of the canna exhibit.

Wm. Tricker & Son's display of water lilies included many hybrids of the late Wm. Tricker's own production. The exhibit had for a background a pretty piece of natural rock work and waterfall effect.

The Texas Rose Company's rose display as a whole was remarkable for this season of the year, as gener-

TIMOTHY SMITH

Chairman, Flower Show Committee, Cleveland.

ally at this time of the year in Houston the roses are pretty poor.

The California Rose Company made a grand rose display with fifteen varieties, among which were American Beauties growing out of doors with 36 inch stems. The greatest bloomer in this display was La Detroit, of which there were fifty plants in one bed. Mlle. Edouard Herriot and Etoile de France showed up exceptionally well.

Baldwinsville, N. Y.—At a recent meeting of the citizens of this village a society to be known as the Baldwinsville Floral Society was organized to promote the floral interests of the village.

Under the heading of "Horticultural Notes" in a contemporary we find notes on orchard spraying, citrus white fly, wood pulp, perfumes, crude rubber, paleo-botanists and several other topics. Why not include astrology, mesmerism, kleptomania, movies, Mexican troubles and theology? Any old thing with the exception of gardening.

Some Important New or Little Known Trees and Shrubs

By JOHN DUNBAR, Botanist, S. A. F.

During the past eighteen years a large number of species of hardy, or relatively hardy trees and shrubs have been introduced to cultivation from eastern Asia and North America, to scientific institutions, parks and gardens, and a large number of varieties, crosses, and hybrids amongst some genera of ornamental shrubs, have been introduced from various sources to cultivation. We propose to mention a limited number that have been partially tested and appear promising in the city parks, Rochester, N. Y.

SYRINGAS. Perhaps the most popular of all garden shrubs are the lilacs, and our parks and gardens have been wonderfully enriched during late years with superb varieties and hybrids that have completely outclassed many older varieties that we thought could not be improved upon. The introduction of new species of lilacs from Western China, by E. H. Wilson, through the Arnold Arboretum, has been a wonderful revelation.

Syringa reflexa is one of the most beautiful lilacs from Western China and has flowered with us for two years. It has curving panicles of rosy pink flowers, eight to ten inches long, about June 1st. It has good, ample foliage. *Syringa Sweginowii*, from eastern Asia, has loose dainty clusters of fragrant white flowers, shading to pink. It flowers about June 10th and is a strong, vigorous shrub. *Syringa tomentella*, from western China, has a compact, much-branched habit and produces clusters of rosy-pink flowers about June 7th. Mr. Wilson states that when he first saw this lilac growing in the wild, he thought it was the most beautiful lilac he had ever seen. It is very variable in its characters and some forms of it were named *S. Wilsonii*, and *S. Rehderiana*. The specific name *tomentella*, however, stands for the group. *Syringa Wolfii* is a native of Manchuria, and came into cultivation through Petrograd botanists a few years since. It is in full flower from June 1st to 5th, and has panicles six to seven inches long of rosy-purple flowers, and blooms most profusely. It has very distinct oval-shaped leaves.

A few years since, the Lemoines of France introduced a most important race of early-flowering lilacs to cultivation by hybridizing *Syringa affinis* Giraldis, with some of the earliest flowering *vulgaris* forms. The former is an early blooming lilac from northern China that has been in cultivation a good many years. These new hybrids blossom much earlier than the *vulgaris* group. Four of them have flowered with us for several years. *Lamartine* has single, elegant panicles of mauve pink flowers; *Mirabeau*, single panicles of mauve lilac blossoms. *Berreyer* has double, large panicles of mauve flowers, and *Vauban*, double, numerous, prominent panicles of rosy mauve flowers.

It is a somewhat difficult task to select a few of the best of the most recent single and double flowering

lilacs amongst the *vulgaris* varieties and hybrids, when these varieties run into the hundreds. Amongst single, various shades of blue and bluish lilac and bluish violet, we would recommend *Crampel*, *Décadence*, *Gilbert*, *President Lincoln* and *Ronsard*; in single, lilac pink shades, *lilarosa*, *Lovaniensis*, *macrostachia* and *Schermerhornii*. *Lilarosa*, *Lovaniensis* and *Schermerhornii* have been in cultivation for a good many years. A very distinct shade in salmon pink is shown in *Lucie Baltet*, and in this particular color it stands alone; in shades of purple red to violet red, *Cavour*, *Danton*, *Laplace*, *Marceau*, *Milton* and *Monge*. In single white, *Kate Harlin*, *Madame Florent Stepman*, and *Vestale*. *Vestale* is perhaps the best single white flowering lilac in cultivation. The large pure white blossoms, partly reflexed, on large compound clusters, give it a most distinctive appearance.

In double crimson red, purple red, and violet red, we would recommend *Adelaide Dunbar*, *Charles Joly*, *De Saussure* and *Paul Harriot*; double blue, bluish lilac and bluish violet, *Godron*, *Maréchal Lannes*, *Olivier de Serres*, *President Vigier* and *Victor Lemoine*; double lilac pink shades, *Comte de Kerchove*, *Edouard Andre*, *Louis Henry*, *President Fallières* and *Waldeck-Rousseau*; double white, *Dame Blanche*, *Jeanne d'Arc*, *Madame de Miller*, *Miss Ellen Willmott* and *Rabelais*.

DEUTZIAS. Some beautiful *Deutzias* have been introduced from western China and a large array of most beautiful hybrids and varieties have been introduced by the Lemoines. The long branching sprays of these new hybrid *Deutzias* in white, rosy pink, and purplish red flowers, should be splendid plants for cut flower purposes for florists. *Deutzia discolor* with its white, dense corymbs of flowers is a very showy shrub. Although discovered a good many years since, it is only lately that we secured it. *Deutzia glomeruliflora* is a neat shrub from western China, with grayish white leaves, and produces very numerous, dense, white, small flower corymbs. *Deutzia longifolia* from western China is an upright branching shrub with oblong leaves. The flowers are exceedingly variable, shading through rosy pink to purplish red.

Amongst the numerous hybrids and varieties, perhaps some of the most distinct are: *D. rosea campanulata* in which the long curving branches, covered with the bell-shaped white flowers are remarkably beautiful; *D. rosea carminea* has profuse light pink flowers, tinted carmine outside; *D. rosea floribunda* has very large blossoms, porcelain white, tinted with rosy pink outside of the petals; *D. rosea grandiflora* is a gem, and has large, well expanded blossoms, white, flushed with pink and carmine buds; *D. carnea lactea* has milky white blossoms in great profusion and sulphur white anthers; *D. excellens* has most distinct flowers, bearing a resemblance

to hawthorn blossoms. The pure white flowers are borne on loose panicles; *D. elegantissima* is an elegant flowering shrub with slender branches thickly covered with corymbs of rose tinted flowers and with carmine buds. It is true that some of the above hybrid *Deutzias* were produced twelve to fifteen years since, but they are still little known.

PHILADELPHUS. *Philadelphus Magdalenae* is an interesting new species from western China, with showy white flowers and distinct, ovate, acuminate-toothed leaves. It was first introduced from China by Maurice de Vilmorin and re-introduced by E. H. Wilson. *P. purpurascens* is another new Chinese species. It is a strong-growing shrub with somewhat drooping branches. The pleasingly fragrant, white, bell-shaped blossoms are produced freely from all of the branchlets.

A very large number of beautiful varieties and hybrids of *Philadelphus* have been sent out by the Lemoines during recent years and we will mention only a few of them. *Philadelphus Albatre* is very floriferous and the slender branches produce dense clusters of pure white, very double flowers which are particularly attractive to many people. *P. Argentine* is an erect-growing shrub and produces large double white flowers over two inches wide. The petals have a distinctly imbricated appearance. *P. Banniere* is a gem. It is a tall-growing shrub and the semi-double, very large, pure white blossoms are borne abundantly on the branches and branchlets. *P. Mer de Glace* is a tall-growing shrub and has perhaps the largest blossoms of any *Philadelphus*. The snow white blossoms are double to semi-double and have somewhat the appearance of a rose. *P. Virginal* is surely a shrub for the florists to grow. It is vigorous in habit and produces an extraordinary profusion of pure white double flowers in dense clusters, and the branches hang down under their weight. It would appear to be a fine shrub for cut flower purposes. A number of years since, there was considerable attention given in some nursery circles to the first appearance of *P. purpureo maculatus*, which showed a distinct reddish pink color on the lower part of the corolla. I remember how enthusiastic the late John Charlton of Rochester, N. Y., was in describing this *Philadelphus* to me, some time before I had an opportunity of seeing it. A number of varieties in this group have since appeared and have all flowered with us. Amongst them are *P. Etoile Rose*, *P. Romeo*, *P. Sibylle* and *P. Sirene*, and they all show single flowers in various shades of rosy pink to purplish red on the lower part of the corolla. They are small growing bushes and are somewhat tender. The red color has been derived from a Mexican species. In our judgment they are very pretty and are desirable garden plants.

Boddington's Re-selected Winter-flowering Spencers as grown by Wm. Sim, Cliftondale, Mass.

COTONEASTERS. If Mr. Wilson had done nothing more than introduce the large number of species of beautiful hardy Cotoneasters for the embellishment of the gardens and parks of northeastern America, he would then have achieved a splendid success. We have a number of them under cultivation and some of the most distinctive are as follows: Cotoneaster amoena is a dense, compact shrub. The flowers are inconspicuous but the globose, orange-red berries are very ornamental in October and November. C. divaricata is an upright, robust shrub, thickly covered with small deep green, glossy leaves. The ovoid bright red fruits are remarkably pretty in September. C. foveolata is a most vigorous growing species with larger leaves than most of the other kinds. The flowers have a reddish appearance and the fruit is black. The foliage turns to orange-red in the Autumn. C. Franchetii is a most graceful shrub with branches somewhat pendulous. The leaves are most attractive, deep green above and whitish beneath. The small flower corymbs have a pinkish appearance. The ovoid orange-red fruits ripen in October and November and are very attractive. C. Henryana is a low spreading shrub with distinct, oblong, dark green leaves. The whitish flower clusters are attractive. The fruit is red. C. multiflora is perhaps the showiest flowering of all of the Cotoneasters. The white flowers, borne on the arching branches, are very beautiful. The roundish bluish green leaves are very attractive. C.

Zabelii is a beautiful shrub with slender, graceful, spreading branches and oval leaves, dull green above, yellowish white below. It has pinkish flower corymbs and roundish, red, drooping fruit clusters in September. BERBERIS. A large number of beautiful new barberries have come from western China. Berberis aggregata is an upright dense growing shrub with brownish red stems, smallish tapering leaves, deep green above, pale below. The dense spikes of yellow flowers are borne on the branchlets during the first week in July. B. dictyophylla is the most distinct of all of the barberries. The angular branchlets are covered with a white bloom. The leaves are pale green above and chalky white beneath, which gives the whole plant a whitish aspect. The fruit is dark blue with a

glaucous bloom. It is a very interesting species. B. polyantha is a very dense upright species with the lower branches spreading. The small leaves are obovate, olive green above, whitish beneath. It has dense compound spikes of yellow flowers during the first week in July. B. Poiratii latifolia is a beautiful dense shrub with a drooping habit and has showy red fruit in the autumn. B. verruculosa is a hardy, handsome low evergreen barberry from western Szechuan. A really hardy evergreen barberry is very desirable. Our plants are about one foot high. The dense branches, thickly covered with small deeply lustrous green leaves, render it most attractive. The small deep yellow flowers are very pretty. B. Wilsonae is a dense compact bush thickly covered with very small tapering

Primula Malacoides Rosea

Florists who grow stock for the Retail Trade should obtain plants of this charming little Primrose during September and October for St. Valentine's Day and Easter

FRED H. LEMON & CO.

RICHMOND

INDIANA

leaves. It is the latest of all barberies to flower with us and blossoms about the middle of July. The coral red fruits are remarkably pretty in late autumn. The tips of the branches are occasionally winter-killed with us.

VIBURNUM. Some important new *Viburnums* have been introduced. *V. Carlesii*, from Korea, is perhaps one of the handsomest plants introduced into American gardens in recent years. The splendid merits of this shrub have already appealed to some American nurserymen. It blooms with us about the end of April and first week of May. The unfolding pink buds and white or faintly blush fragrant flowers which follow, are remarkably attractive. The habit is compact. *V. budleifolium* from western China, has oblong leaves from five to six inches long and two inches wide, dark green and rugose above, densely covered with a felty white tomentum beneath. About the middle of May it produces pinkish tinted flower clusters, not particularly showy. It is quite hardy and its foliage is very ornamental. *V. rhytidophyllum* is a handsome evergreen species. The rugose leaves are six inches long and two inches wide and covered with a pale rusty tomentum beneath. The whitish flower corymbs open about the middle of May and the black fruits ripen in September. *V. Veitchii* has leaves that bear a resemblance to *V. lantana*, but they are much handsomer. This species has not yet flowered with us but it appears to be hardy.

LONICERA. Amongst the new bush honeysuckles from western China, there are none so distinctive as *Lonicera Maackii* var. *podocarpa*. It is a tall, robust, spreading bush with showy white flowers. It is about the latest of all *Loniceras* to blossom. The handsome red fruits are very showy in October and November. The type, *L. Maackii*, has very showy white flowers but the fruits are less conspicuous.

SPIRAEA. A number of *Spiraeas* have been introduced from China. *Spiraea Henryi* is one of the best and is a vigorous shrub, five to six feet tall. The branches are festooned with numerous clusters of white flowers about the middle of June. It has good characteristic foliage and this can hardly be said of a great many *Spiraeas* now in cultivation. *Spiraea Veitchii* has a more upright habit of growth than *S. Henryi* and smaller leaves which are very distinctive. The branchlets produce terminal clusters of showy white flowers about the end of June.

CORNUS. *Cornus paucinervis* is a beautiful low growing shrub from Szechuan. Occasionally individuals have a semi-prostrate habit. It has numerous small lance-shaped leaves, deep green above. The conspicuous white flower clusters are borne on terminal branchlets from July 15th to 20th, and it is the latest of all the dogwoods to flower.

HAMAMELIS. *Hamamelis mollis* the handsome Chinese Witch Hazel, was first introduced to cultivation by E. H. Wilson through the late Veitchian nurseries of England. The large orbicular-shaped leaves, deep green above, are very ornamental. The showy yellow flowers appear sometimes in mid-winter if the weather is

mild. It is usually in good bloom about the first of March.

INDIGOFERA. *Indigofera Kirilowii* is a handsome low shrub from Korea and spreads into a compact mass. The showy panicles of pink flowers come into bloom in July. This handsome shrub was found in Korea a number of years since by J. G. Jack.

EXOCHORDA. *Exochorda Giraldis*, from western China, is a handsome flowering shrub and an important addition to the Chinese Pearl Bushes. The flowers are larger than those of *E. racemosa*. Our plants are small, but I have seen large individuals in the garden of Bayard Thayer, Lancaster, Mass.

(To to be continued)

PUBLICATIONS RECEIVED.

Seeding and Planting in the Practice of Forestry. By James W. Toumey, M. S. M. A., Director of the Forest School and Professor of Silviculture, Yale University. The first sensation on a glance over the chapters of this book is a conception of its thoroughness. A further perusal intensifies this impression. The book presents both the details of practice, and the fundamental principles that control success and failure in the economic production of nursery stock and the artificial regenerations of forests. It explains the why as well as the how.

The author states in his preface:

"The practitioner must have a clear appreciation of underlying principles or he cannot be safely trusted to direct the details of nursery practice, seeding and planting. He must have a broad knowledge of methods and tools in order that he may attain successful regeneration at the least cost."

Almost without exception, the cultural methods described and the tools and machines figured, have been used by the author, or are the results of the work observed by him in this country or abroad.

Part I of the book deals with the silvical basis for seeding and planting, more particularly the principles which underlie the choice of species, the closeness of spacing and the composition of the stand. Part II is descriptive of the various operations in artificial regeneration and the results that may be expected from the best practice. The chapter headings are:

Part I.—Silvical Basis for Seeding and Planting.

Chapter I—Definitions and Generalities. II and III—The Choice of Species in Artificial Regeneration. IV—The Principles which Determine Spacing. V—The Principles which Govern the Composition of the Stand.

Part II.—The Artificial Formation of Woods.

Chapter VI—General Considerations. VII and VIII—Forest Tree Seed and Seed Collecting. IX—The Protection of Seeding and Planting Sites. X—Preliminary Treatment of Seeding and Planting Sites. XI—Establishing Forests by Direct Seeding. XII to XV—The Forest Nursery. XVI to XVII—Establishing Forests by Planting.

There are 454 pages, 6 by 9, 140 figures. The book is published by John Wiley & Sons, Inc., New York, at \$3.50 net. Copies may be obtained from the office of HORTICULTURE at publisher's price.

Parasitic Rhizoctonias in America.—Prof. George L. Peltier of the University of Illinois is Plant Pathologist for the Society of American Florists. He makes no special report at the Convention this year but the completion

and issuance of the very elaborate illustrated bulletin on his observations and study of the fungus *Rhizoctonia* makes a valuable addition to our standard floricultural literature. The document, which is sent out as Bulletin 189, consists of 112 pages and can be procured upon request addressed to the Director, Illinois Agricultural Experiment Station, Urbana, Ill.

One of the most serious and troublesome diseases which must be contended with by carnation growers in this country is the co-called "stem rot" due to the fungus *Rhizoctonia*. In July, 1912, a study of this disease was undertaken by Prof. Peltier, together with a thorough investigation of those diseases of vegetable, field, and floricultural crops which are caused by *Rhizoctonia*.

The fact that 165 species of plants are reported as being more or less susceptible to *Rhizoctonia Solani* Kuhn (*Corticium vagum* B. & C.) in the United States indicates the wide distribution of the fungus in this country. Plants belonging to the families, *Amananthaceae*, *Caryophyllaceae*, *Cruciferae*, *Leguminosae*, *Solanaceae* and *Compositae* are especially susceptible. Under favorable conditions the fungus can attack plants in these families at any stage, when grown either in the field or in the greenhouse.

The symptoms produced by *Rhizoctonia Solani* (*Corticium vagum*) in natural infection are largely similar when appearing on the same type of host. The damping-off of seedlings and cuttings, of which *Rhizoctonia* is the most common cause both in the cutting bench and in the seed pan, is identical with the various plants, as is also the rotting of a number of root crops. In most herbaceous plants, such as the carnation, a stem rot is produced, the symptoms of which are identical on the various hosts. On very resistant plants, however, lesions only are formed; these are apparently identical on the different hosts.

Inoculation Experiments.

With the view of determining the degree of biologic specialization which may exist between the various cultural strains of *Rhizoctonia*, or between strains isolated from different hosts or of different geographical origin, cross-inoculation experiments were conducted involving about 3,000 cuttings, 2,000 plants, and 7,000 seedlings of various kinds. With these, comparisons were made of about forty-five strains of *Rhizoctonia*, many of which were isolated by Prof. Peltier. When carnation cuttings were infected, the strains used, with but two exceptions, whether from carnation or from other hosts, were able to cause more or less loss, the mortality of the cuttings ranging in either instance from 0 to 100 percent. Again, the same strains varied in virulence from one year to another, in most cases decreasing in virulence with age. When cuttings other than carnation were used, the results were the same. It is shown that when young rooted carnation plants were inoculated, the percentage of loss was much less than with cuttings. Here, however, the carnation strains seemed to be slightly more virulent than those from other sources, although there was still a great difference in the strains from carnation

ANNOUNCEMENT

Commencing December, 1916, I shall disseminate

Crimson Carnation Doris

Awarded A. C. S. certificate at St. Louis, January, 1916, scoring 88 points after being in the boxes on the trip 48 hours. This will give some idea of its keeping and shipping qualities. Habit erect, producing an abundance of high-grade flowers on long stiff stems, fine color, calyx very seldom splits.

Price, \$12 per 100, \$100 per 1000

themselves. Only one of the strains from other sources was unable to attack young rooted carnation plants.

On old carnation plants in the greenhouse which were inoculated by contact, even the carnation strains did not cause a high percentage of infection. However, when plants growing under these same conditions were slightly wounded and then inoculated, percentage of loss was very high with nearly all the strains studied. When conditions (temperature and moisture) were favorable to the fungus, most of the strains studied were able to infect carnation plants as readily as the carnation strains themselves. In the majority of cases all strains were able to cause damping-off of various seedlings. There was a great difference in the virulence of strains when inoculated on the same host from which they had been isolated and when inoculated on other hosts. In a study of these experiments the point that stands out at first glance is the great variation in the mortality of the plants when inoculated with strains from the same host and when inoculated with strains from other sources.

Repeated observations in the greenhouse and field have shown that a certain amount of the mycelium must be present before the fungus is able to attack and kill the plant. A small amount of mycelium has always been observed around a carnation plant in the bench a week or more before the plant showed any signs of being diseased. In fact, a certain amount of mycelium is always present in the carnation soil in the greenhouse, but it is only when the temperature is high that the fungus is able to attack the plants. This explains why stem rot of carnations is more severe during the summer months than in the winter. In the field similar conditions are necessary to result in the infection of a plant.

MISCANTHUS SINENSIS (EULALIA JAPONICA).

We have given over our cover page this week to an excellent illustration of this most useful of all the hardy ornamental grasses. We have always known it, as have most of our readers, undoubtedly, as *Eulalia japonica* and that name is liable to be the one by which it will be best known in the trade for many years to come. Absolutely hardy, growing well in almost any situation and bearing beau-

tiful feathery plumes in late summer *Eulalia japonica*, in its several varieties, is indispensable in the composition of grass beds in association with *Arundos*, *Pennisetums*, etc., in mixed borders or in "subtropical" bedding, where it makes a graceful companion and foil for the cannas, castor oil beans and other broad foliaged subjects.

One Week's Imports.

Imports at the port of New York, of horticultural material, for the week ending Aug. 18th, were recorded as follows:

Bulbs—France, \$2,698; Netherlands, \$592; England, \$6; Bermuda, \$811; Japan, \$2,403.

Plants—Belgium, \$107; England, \$255; Bermuda, \$19.

Clover seed—France, \$208.

Grass seed—Jamaica, \$158.

All other seeds—Denmark, \$1,063; France, \$3,187; Spain, \$320; England, \$495; Hongkong, \$327; Canary Islands, \$3,756.

Nitrate of potash—England, \$120, 637.

Nitrate of soda—Chile, \$53,651.

Other fertilizers—England, \$177; Argentine, \$406.

To a Congressman.

(After receiving a letter promising many packets of free seeds.)
(From the New York Press.)

Dear Sir: I got your little note. But if you want to keep my vote, Don't send the seeds you mention there, But drop them in the empty air. Last year you sent me quite a pack. And, trusting fool, I broke my back To plant them in the yawning ground And make for each its little mound. I watered them with tender care, Protected them from crow and bear, And plowed between the long, straight rows—

Oh, could I punch you in the nose. Tobacco came where beans should be. Now, as I never smoke, you see, The crop was not a welcome one; Tobacco worms had lots of fun. The tapioca wildly grew Where I had looked for green peas new, And rhubarb raised its horrid head In what I thought a parsley bed, While rank alfalfa made a muss Where should have bloomed asparagus. I stuck up frames to hold tomatoes, And on them crept some sweet potatoes. Worst of all, wild turnips popped

Where I the melon seedlets dropped. Please send your seeds to far Peru, Or Mexico, or Timbuctoo; But kindly wipe me off your slate, Or you won't be my candidate.

Notes.

Sheboygan, Wis.—The John H. Allan Seed Co. has increased its capital stock from \$230,000 to \$280,000.

Louisville, Ky.—C. F. Wood, formerly of Wood, Stubbs & Co., has opened a seed brokerage store in the Board of Trade building.

George Clark, of Dreer's, has just returned from an extended trip to the Pacific coast and in between. He is not very enthusiastic about crops. From an acre they used to get some nine hundred pounds of sweet peas. Now they are lucky if they get two hundred. On being asked the why, George, as usual, was non-committal. He put it all on the green fly. It's a queer thing about George that he does not confine this to the Pacific coast. If you ask him about the bad sweet peas, bad asters, bad gladioli on the Atlantic coast, he has the same an-

Of Interest to Retail Florists

FLORISTS' TELEGRAPH DELIVERY.

In acknowledging my worthy successor, W. F. Gude of Washington, D. C. as president of the Florists' Telegraph Delivery, I feel that there are some statements pertinent to this organization due the members and past officials.

It has been my pleasure to see this organization grow from nothing to three hundred and sixty members, consisting mainly of the best retailers in the country; also to have this organization advanced from three hundred dollars in arrears in the guarantee fund to approximately six thousand dollars gross balance. The annual business transacted by the members of this organization is estimated at well over a million dollars per year. This wonderful growth has been due in part to the untiring efforts of several of the members, particularly Philip Breitmeyer of Detroit, Paul Schulz of Louisville, Geo. E. M. Stumpp of New York, W. J. Smyth of Chicago, W. J. Palmer of Buffalo and numerous others. The officers and directors of the Association have worked untiringly and have given their time and money to promote this organization's welfare. There has never been a misunderstanding among any of them and on the whole, progress has been one of harmony and general upbuilding. I wish to pay particular tribute to the untiring efforts of Secretary Pochelon and Treasurer W. L. Rock, whose work is scarcely appreciated as yet. The adjourned meeting in Chicago, Oct. 11th and 12th will undoubtedly be well attended and a source of much benefit to the whole flower profession and plans are under way which will be of decided value in the sale and promotion of flowers throughout the country.

I wish again to thank all those who have been instrumental in the success of the Florists' Telegraph Delivery, not forgetting the trade press.

IRWIN BERTERMANN.

Past President.

NEWS ITEMS FROM EVERYWHERE

CHICAGO.

Mr. and Mrs. August Lange returned Monday from Houston via steamer to New York.

H. A. Stone is mourning the death of Mrs. Stone's mother, who has been a member of his family for years.

Mrs. John W. Poehlmann and daughter, Frieda, are spending a few weeks with relatives in New Hampshire.

A. H. Schneider, well-known florist of Oak Park, Ill., lost his father Aug. 28th. He died while walking about the gardens.

Tom McAllister is an enthusiast on S. A. F. conventions and the one at Houston is receiving his heartiest commendations. He returned via Dallas, Ft. Worth and the Iron Mt. route.

C. B. Knickman, who represents McHutchison & Co., from coast to coast, is here on his way back from California. The western coast is reported as decidedly dull from a business standpoint.

Announcements of the 1916 convention of the Vegetable Growers' Association of America, at the La Salle Hotel, Sept. 26, 27, 28, 29, are out, and show a long list of attractive features on the program.

Mr. and Mrs. Grover Rambler of Shreveport, La., are taking in Chicago on their honeymoon trip. Mrs. Rambler was formerly Miss D. E. Ruch, and had built up a good business as a florist in Shreveport, which will be continued as before.

Mr. and Mrs. F. C. Suchy and son, of San Antonio, Tex., have spent two weeks in and about Chicago. They are traveling by auto, and left for the east, expecting to stop at various cities on the way to Philadelphia, where they will take a boat for Galveston.

John G. Poehlmann, who has been in the Battle Creek Sanitarium for the past four weeks, has returned to his position as manager of the store on East Randolph St., greatly improved in health. Mr. Poehlmann devoted much time to his father, the late John W. Poehlmann, during his long illness, and has not been quite well since his death.

A. F. Longren, for several years traveling salesman for Poehlmann Bros. Co., is home from his summer trip, which terminated at Houston. Mr. Longren's impressions of the sunny south, from a salesman's viewpoint, are not altogether pleasing and he is not optimistic about an immediate marked increase in southern business.

Among the Chicago visitors this week is Pontius Wolff, who comes from Molndal-Goteborg, Sweden. He is accompanied by his sister and the visit to this country is largely to see its horticultural products and methods of cultivation. Mr. Wolff is much interested in horticultural societies and was one of the judges at Belgium's International Show three years ago. He was surprised at the quantity of made-up baskets and fern dishes used here and says they do not sell abroad.

PITTSBURGH.

W. P. and S. L. Gallaher have moved their flower shop from the Fifth Avenue Arcade to the Buhl Building at 204 Fifth avenue.

W. T. Ammerman of Altoona, Pa., who comes from the local Carnegie Institute of Technology, has been engaged in the landscape department of A. W. Smith Co.

Mr. and Mrs. Arthur C. Hall are at Atlantic City, N. J. Theodore P. Langhans and son are on a fishing trip in Canada. Walter Breitensteen has returned from an extended vacation at Sandy Creek.

The Ludwig Floral Company have taken the foyer of the main building of the Western Pennsylvania Exposition Society for display and selling during the six weeks' exposition, which opened last Wednesday. The firm also has the contract for the decoration of Music Hall and other sections of the exposition buildings.

C. H. Hadley, Jr., investigator in entomology at Cornell has been selected to head the extension work in entomology to be opened this fall at Penna. State College. His appointment is made possible through the operation of the Smith Lever bill, passed two years ago by the federal government, providing funds for agricultural extension work.

NEW YORK.

Gardeners writing in the correspondents columns of the New York Sun are severely criticising the New York Botanical Garden for the low wages paid and exacting time rules especially for the gardeners in the greenhouse department.

An automobile ride to Freeport, L. I., and then by boat to Green Island, from the starting place at Fifth avenue and Twenty-third street, is the programme mapped out for the members of the Greenwood Florists' Employees Association for their Labor Day outing, Sept. 4. James J. Daily, standard bearer of the association, is head of the Arrangements Committee.

PHILADELPHIA.

Charles Sim, Rosemont, sailed on the S. S. St. Paul, Aug. 26th, on a six weeks' trip to the old country.

President Samuel S. Pennock, of the American Rose Society announces that over fifty new members have joined the society within the past month, also that the thousand-dollar guarantee fund for research purposes is now fully assured and that Cornell has already started on the work. Enthusiasm is the word. No great work was ever accomplished without enthusiasm. Keep S. S. P. and his able bunch of co-operators in a while longer—we'll forget our families, friends and fatherlands—and call in the doctor for the Rose Fever.

BUFFALO.

The new home of the Wm. F. Kastig Co. will be located at 568-570 Washington street, near Chippewa, and in the center of the market district. The building is a four-story brick and

basement and its spacious floors are 50x90 and well lighted. An alley adjoins the rear of the building for carting and shipping purposes and the premises are well laid out for a wholesale flower market. There are passenger and freight elevators and the building is equipped with steam heating. Plans are under way for refrigerators 12x36 for cold storage purposes. On Monday, September 4, the firm will be located permanently and open for business at the new home, though only part of the building will be used for the time being.

BOSTON.

John J. Williams, of Cambridge, and Ethel F. Strom, of Somerville, were married on August 20.

The annual sale of choice of stalls at the Boston Co-operative Market on Saturday, September 9, at 9.30 A. M.

Welch Bros. Company are getting ready to move from their old location at 226 Devonshire street to the basement of the premises now occupied by Patrick Welch at 262 Devonshire St.

America gladioli four feet tall are being marketed by the Mann Company. The bulbs are home grown from bulbs imported from Holland three years ago and the spikes are the finest we have seen anywhere.

The annual meeting of the Florists' Bowling Association will be held on September 12, when plans for the season will be mapped out. Write to J. Sloane, secretary, Flower Exchange, Winthrop square, if you wish to join the aggregation.

The new city headquarters of the Waban Rose Conservatories at 5 Winthrop square was opened on Thursday of this week for business. The place is spacious and well fitted with every apportionance and facility. Mr. Montgomery is planning to cut a watermelon one of these days in honor of the occasion.

NEWPORT, R. I.

Summer American Beauties are a leading crop with Carl Jurgens. There is demand for all he can turn out.

The Newport florist stores are all doing good business this season. Here one sees Gardenia Fortunei blooms of marvelous perfection such as can be found nowhere else in this country at least.

Anyone interested in the possibilities of the transplanting of large trees will find remarkable examples of successful moving of big lindens, elms and oaks on the Wells estate where Andrew Meikle has been in charge for many years. On this place many fine specimens of rare conifers are to be seen.

One of the most impressive and dazzling sights in Newport is the sunken garden on the Berwynd estate where for 23 years Bruce Butterton has presided. Flanked by topiary gardening and formal groups with a rich background of deciduous groves, Begonia Erfordi is here seen at its best—8,000 plants in trim geometrical beds cut in the greensward making a picture long to be remembered.

H. BAYERSDORFER & CO.

1129 Arch Street, PHILADELPHIA, PA.

PICTURESQUE LA SALLE COUNTY.

La Salle County, Ill., is an ideal place for a short vacation. In the making of a prairie state, nature here seems to have suddenly changed her mood, and from rolling smoothly the miles and miles of earth to a monotonous level, she turns to scooping out and piling up until the result of her freakish work is a scene unexcelled

Canyon, Deer Park, Ill.

for picturesque beauty by even the mountains of Colorado. As if to atone for the plain surface of the rest of Illinois three great special features of rock formation have been grouped together within eight miles.

Starved Rock, formerly called Fort St. Louis, is the place where the first white settlement was attempted in Illinois, in 1682, by La Salle, who hoped to make it a great fur trading center. Nearby were the Illinois, the Shawnee, the Miami, the Iroquois and other Indian tribes, whose battles for possession finally ended in 1769, by a clash which left the Illinois warriors starving upon the great rock, which event is commemorated by the name then given to the old fort, and a few years ago Starved Rock and its ad-

joining canyons became a State Park, where 100,000 visitors journey yearly.

Deer Park, Ill., has been noted for its great canyon three-fourths of a mile long and from 75 to over 100 feet deep. It is a part of a tract originally secured by Wm. Clayton from the government. With the passing of years the property came into the possession of F. W. Matthiessen and now includes 1600 acres reaching to Starved Rock Park, and is considered the finest private estate in the Illinois. It is the owner's pleasure to give the public the enjoyment of the canyon and surrounding grounds and he has spent thousands of dollars in cement bridges, steps, etc., with pavilions and parking places for autos. A nominal admission fee of ten cents is charged and turned over to the women's clubs who police the park and use the rest for charity. The gardener in charge is Samuel Holmes. Mr. Holmes says the cold water from an artesian well, though unlimited in supply, has not met the need of the gardens, and geraniums, particularly, have suffered in the hot sun this summer. There are no conservatories, and all the plants are started in frames.

Emptying into the Vermilion River three miles from Deer Park, are beautiful Bailey's Falls, which in mid-summer are a wonderful pile of bare jagged rocks, finished at the top with a broad level shelf of rock. Two giant oaks are found on the Chapin farm in one of the beautiful valleys. From tip to tip the branches measure 86 feet and the trunks which are without scar have a girth of 13 feet well above the ground. A noble elm tree is a fitting companion, being almost as large.

Flower Market Reports

BOSTON The situation in the cut flower trade continues exceptional and peculiar.

There is not any very heavy demand, but the supply of desirable material is so light, that conditions are continually strained and prices hold at a level almost beyond belief. Asters are better in quality than they were last week. Gladioli are seen in all qualities, the choice specimens bringing record summer prices. Lilies are in good demand at approximate Easter figures. There are no carnations, but a few sweet peas of acceptable quality are seen. Salpiglossis, calendulas, marigolds, cockscomb, cosmos—in fact, anything from the garden, receives respectful attention from the buyers just now. The street fakir is among the lost tribes for the present.

BUFFALO Stock has been scarce for the past two weeks.

This applies even to asters and gladioli for which the Buffalo market and vicinity has been the leader. The early aster crops burned up and the late-branching does not look promising. Not alone asters and gladioli but roses of good quality are scarce. Lilies have had a good summer demand and have done well in price. Beauties are only fair in quality and there is no special demand for them. There are plenty of greens, such as ferns, Asparagus sprengeri and adiantum.

CHICAGO The general scarcity of good stock continues and there is no reason for expecting a change within the next two weeks or until carnations are further advanced and more cool weather puts new life into the roses. Chicago growers have now had just one week of moderate weather since the first of July, and how much that can be made to do for the stock will differ with the conditions, but at best the results will be limited. Asters are coming with the greater proportion far down the scale and the good ones sell quickly. Carnations are mostly small and fit only for filling in, the stems being short and flowers often burned. Roses are equal to the demand in number, but buyers cannot always have the quality they are looking for, as good stock is very scarce. Lily of the valley continues to bring the top price. Orchids are very scarce. Gladioli are larger and better even than last week, with a good price waiting for the grower. There is no kind of good stock that can be said to be in over-supply.

Business excellent, **CINCINNATI** but very little good stock available and practically everything is cleaning up on sight. There is a fair cut of lilies and gladioli are plentiful. Asters are on the short side owing to the tardiness of the late crop. All that do come in have been finding a good sale. Cosmos and dahlias are not very plentiful as yet. Smilax is very scarce. Bronze galax has, been enjoying an exceptionally strong demand.

Market conditions are **NEW YORK** not as satisfactory as they were a week ago. Flowers of all kinds are increasing in quantity and quality.

BEAUTIES

Are improving in quality every day; nothing better to be had now.

From \$1.00 to \$3.00 per doz.

RUSSELLS

Are also very good at present.

\$6.00, \$8.00, \$10.00 and \$12.00 per 100

Store Closed at Noon, Monday, Sept. 4th

Asters are more plentiful and those of finest quality are selling well. Lily of the valley is very much more in evidence, and while commission men are endeavoring to keep up stiff prices, the supply is accumulating and prices will be compelled to drop. There are four grades arriving in the market, selling at prices accordingly. Lilies are very much more plentiful. Rubrums, long-stemmed, are selling better, but the short-stemmed flowers are hard to move. Roses of the better quality are realizing fair prices for the season. Cattleyas are still very scarce, and owing to the scarcity fabulous prices are being asked and obtained. All things considered, business is very slow and unsatisfactory, and the question which is now commencing to worry the dealers is the railroad strike, as the railroads will not accept perishable goods and cut flowers will come under this heading.

The market here **PHILADELPHIA** at present is in the sellers' favor.

The grower and his agent, the commission man, have it mostly all their own way. No matter how stern and adamant the retailer looks at the salesman—he quails not! All the

dramatic arts of Greece and Italy avail nothing. For a midsummer market there are probably fewer good flowers to be had—especially in outdoor flowers like asters—than any of us can remember. Consequently, material that usually has gone to the dump without a doxology has really brought good money. What's the matter with this season anyway? There are no good sweet peas, no good asters, no good gladioli. In the latter the attractive, delicate and distinctive colors are little in evidence while the dull and wheezy ones stand around, a disgrace to the clan, and are taken only as a medicine. White roses are particularly scarce. New-crop Beauties are in evidence but they hang fire a little. The bright particular star in the rose market just now is Russell. Fine flowers in quantity and they ship better than the others. Lily of the valley is hard to get even at six and a cattleya costs a dollar. Practically no carnations; new crop not yet commenced. Taking it all around it is certainly a remarkable market for this season of the year and one that will probably long be remembered.

Flower Market Reports

(Continued from page 325)

PITTSBURGH Owing to the prolonged stretch of drought and heat, asters have dropped out of sight almost entirely. Otherwise, there are now just about enough flowers to take care of the trade. For the week past there has been somewhat of a demand for gladioli and lilies, which are coming in of fair quality. Roses, too, have commenced to come in again.

Business is quiet with **ST. LOUIS** the retailers and the market is not in an overcrowded condition any one day. Stock is of very poor quality and prices are low. The best sellers are asters and these clean up daily at good prices. Roses are poor and the short stemmed ones do not bring much at any time. Any thing good in carnations is out of the question for the present at least. Gladioli has good call and are of extra good quality. Tuberose stalks were in heavy last week. Lilies are in good demand. Lily of the valley is scarce.

There is a great need for rain in this locality. Conditions this season have been such that the growers are selling flowers which in other years would be discarded as worthless, and they are getting good prices for what they term "trash." It is a hard matter to get good stock in any line. A few thousand roses are received daily from local houses and were it not for these the market would be largely void of desirable stock. Old stock carnations are off the market and the new flowers have been delayed by the intense heat. Lily of the valley is very poor and there is none of local growth to be had. Orchids are very scarce. There are some few gardenias still to be had. Gladioli are on the wane. Dahlias are somewhat better, but asters are nearing an end.

TO THE GROWERS OF ROSES.

This is to inform you that members of the American Rose Society have been raising money to co-operate in employing a trained plant pathologist to investigate diseases of roses. Sufficient money has now been obtained to assure this work, which is already underway. Doctor L. M. Massey of the New York State College of Agriculture, Cornell University, Ithaca, is conducting the investigations. It is hoped that all growers of roses will now take advantage of this arrangement, not only to obtain what little information there is already at hand, but to co-operate in ways which will be suggested from time to time. Through co-operation with Doctor Massey, the growers will greatly increase the efficiency of the investigation and obtain the greatest returns from their investment.

First of all, it seems desirable to make a rose disease survey such as will acquaint us with the various diseases, together with their range and the extent of injury caused by them in this country. In order that this survey may reach its maximum efficiency, it will be necessary for the growers to co-operate by sending specimens of

diseased plants. Franked tags will be supplied on request. It is hoped that each grower will interest himself in this work sufficiently to collect and send diseased material together with a brief statement regarding varieties affected, nature and extent of injury, time of appearance of the disease, and other points of interest which may have been noticed. Acknowledgment of receipt of material will be made and such information as is available in the line of control will be given. Many growers will be visited, but it is hardly necessary to say that it will be impossible to visit all.

The material sent should be freshly collected and should show various stages in the development of the disease. Where roots are sent it will usually be undesirable to enclose any soil. Where convenient, specimens should be mailed so as to reach Ithaca the latter part of the week. Doctor Massey may be away from the city during the early part of the week and the material should receive immediate attention upon its arrival.

Place leaves, buds, etc., between the leaves of an old newspaper, a few between each two sheets. Then roll into a tight bundle, wrap in stout paper. Tie well, attach one of the franked tags on which you have written your name, address and mail. It will go postage free.

Yours for success in this undertaking,

H. H. WHETZEL,
Head of the Department of Plant Pathology,
N. Y. State College of Agriculture, Cornell University.

ST. LOUIS.

The St. Louis Florists' Union met at Library Hall on Aug. 21 to discuss the question of Sunday closing.

F. H. Weber and family, and August Hummert and family are home again from their western vacation trip.

Eli Mioux, foreman for the Bourdet Floral Co., has resigned to start business of his own. He will build greenhouses at Carlyle, Ill.

Mr. B. Progressive, Florist,
Everywhere, U. S. A.

Dear Sir: It will be a decided advantage
as regards prices and quality to place your
order with us.

Soliciting your order through this ad
cuts down the overhead selling expenses
and you positively get lower prices and
better quality. Our terms are liberal and
are a guarantee that you get a square
deal, all bulbs guaranteed true to name or
money refunded.

Write us and upon request we will mail
you our booklet giving prices f. o. b. New
York or Chicago, and we also cheerfully
furnish you with any information that
may be desired. Those of our friends who
will mail us a list of their requirements
will find it has paid them to do so.

Awaiting to hear from you at your pleas-
ure, we remain, Yours very truly,

Westerbeek & Klyn,
Sassenheim, Holland.

THE NUT-GROWER

No. 2 Francis St.

WAYCROSS, GA.

In writing to Advertisers kindly mention Horticulture

INSECT PROBLEMS OF THE FLORIST AS SEEN BY AN ENTOMOLOGIST.

By THOMAS J. H. Entomologist for the Society of American Florists and Ornamental Horticulturists.

When invited by your worthy Secretary to address you, it occurred to the writer that the Entomologist's view of your insect problems might bring something suggestive and perhaps useful, and his invitation was accepted at once. It should be understood at the outset that the writer is and has for many years been a professional entomologist and that his view will necessarily differ from that of many florists.

The insect pests, which the florist must combat successfully or make a failure of his business, depend very largely on the kind of crops which he grows and to a minor extent upon the locality in which he works. The insects which trouble the rose grower in a period of five or ten years are pretty much the same wherever his plant may be located, and the longer he grows the crop continuously the larger and more complete will his list of rose parasites become. This is true because the principal enemies of the rose forms a more or less well defined group and the practice of importing plants from other growers provides for the distribution of the parasites.

Perhaps the species that come into the roses directly from the local environment will exhibit the greatest irregularity in type and number because their attempts to enter are continuous and the conditions must be especially favorable to permit them to persist at all. The florist is in a class quite by himself in the ability to sterilize his soil, and to practice clean culture and rotation of crops. His extremely intensive system of cultivation justifies a procedure in these matters that would be prohibitive for the farmer, fruit grower or even the trucker. Furthermore, the

Hammond's Thrip Juice No. 2

REGISTERED

A Contact Insecticide, Useful and Reliable, Used for 30 Years in Greenhouses, and on Plants, Grape Vines, Trees and Shrubs

Some common Sucking Insects, magnified.

HAMMOND'S PAINT & SLUG SHOT WORKS, Beacon, N. Y.

florist who grows under glass has the climate under his control.

With the climate and the soil at his beck and call it would seem that the plant parasite problems of the florist should be easy of solution. As a matter of fact, the crops of the florist pay their toll to the insect pests to almost if not quite as great an extent as do those of the farmer, fruit grower or trucker.

It seems to the writer that there are two reasons for this condition—one that the plants are grown under forcing conditions and do not therefore have the strength and resistance of those grown under more natural circumstances, and second, that florists acting much like other growers of plants do not take advantage of their opportunities to rid their crops of plant parasites.

It seems reasonable to consider cleaning the soil as an important step toward getting rid of injurious plants. Under field conditions this can best be brought about through good drainage, clean culture and rotation of crops. Under glass house conditions this can best be accomplished by sterilization with steam or carbon bisulphide. Cleaning the soil does not mean that its liveliness shall be destroyed, but rather that its life and response shall be improved. Indeed, where the most severe treatments are used desirable bacteria that may be killed in the process can be largely replaced.

It is reasonable to consider the practice of absolute cleanliness about the field and glass house as another important step in the control of plant parasites. Under field conditions this state of things is incidental to cleaning the soil, but under glass it is not necessarily so. As often as the crop is removed the house should be given a complete cleaning and sterilization.

With a clean soil in a clean environment clean plants are needed to produce a clean crop. In obtaining plants free from parasites, the florist finds his chief difficulty and there appears to be no very good way of getting around it. Perhaps the best method is that of carefully examining all incoming plants and rejecting or treating all that exhibit signs of such a character that the plants live for a period of years, the placing of the recently arrived plants, which seem healthy, in an entirely separate part of the glass house system where they may remain for a time sufficient for the parasitism to develop, followed by

The Recognized Standard Insecticide. A spray remedy for green, black, white fly, thrips and soft scale.

NEW YORK, N. Y.

a ruthless weeding out of the sickly, should prove a good practice.

After the crop has started, the first step in its protection from insects is to keep it healthily growing, for a vigorous plant resists attack more successfully than one the nutrition of which is abnormal. The second step is to keep the sharpest possible lookout for trouble and treat it as soon as it appears.

It is in the treatment of the plant after the insect has appeared that florists' practice appears to have reached its most bewildering diversity. Measures advocated by one grower as a specific for a given species are completely discounted by another and an opposite type of remedy substituted for them. This difference of opinion is partly due to the fact that florists are able to and do produce their wares under so widely different conditions, that in some instances what works for one will fail for another, and partly due to a failure to comprehend the general principles which underlie proper practice. The first is, of course, an entire legitimate cause for difference but the latter is inexcusable.

The treatment which shall be administered to plants infested with parasites depends upon whether the injury has reached a stage where treatment other than prompt destruction is worth while, what the plant itself will stand without damage to growth and appearance, and the nature of the parasite. Injury beyond a point where the plant may readily recover or of such a character (say borers in the main stem of herbaceous plants) that treatment is impracticable must be followed by prompt destruction of the plant and the parasite infesting it.

If the injury is one from which the plant may readily recover, the question of treatment then becomes one of nature, time and methods of applying. The nature depends on the parasite and upon the plant.

If the parasite is an animal, the question whether it consumes foliage or sap must first be determined. If the former, arsenicals should be used if the plant will stand the necessary dosage without injury to its structures or to its appearance. If the latter, nicotine or oil should be employed if the plant will stand the necessary treatment without serious injury to structure or to appearance. In the former case it is quite sufficient to coat the foliage which is being consumed while in the latter the insect itself must be thoroughly drenched. This procedure will answer for the bulk of the florists' insect pests.

There are, however, certain species to which these general rules will not apply and each of them may be considered on its merits. For instance many scale insects do not yield to contact sprays of strength which will

DREER'S "Riverton Special" Plant Tub

No.	Diam.	Ea.	Doz.	100
10	20 in.	\$1.00	\$17.50	\$145.00
20	18 in.	1.45	15.50	130.00
30	16 in.	1.10	12.25	100.00
40	14 in.	.70	7.75	60.00
50	12 in.	.50	5.50	45.00
60	10 in.	.40	4.40	35.00
70	8 in.	.30	3.50	28.00

Manufactured for us exclusively. The best tub ever introduced. The neatest, lightest and cheapest. Painted green, with electric welded hoops. The four largest sizes have drop handles.

HENRY A. DREER, Seeds, Plants, Bulbs, and Supplies, 714 Chestnut Street, Philadelphia, Pa.

leave the plants uninjured and hand removal becomes necessary. Many of the scales infesting palms are illustrations of this sort. Some chewing insects attack plants of such a nature that arsenical staining is inadmissible and contact insecticides must be used, as is the case with the Florida fern caterpillar.

There are crops, such as tomatoes under glass, the insect pests of which yield most easily to fumigation which will destroy a chewing insect as readily as a sucking one.

For the purpose of bringing these methods together and giving them some sort of organization the writer has induced Mr. Harry B. Weiss, of this department to prepare a bulletin on greenhouse insects. Especial attention has been given to this phase of the florists business because it has seemed to us that knowledge of that part of the field has been in more chaotic condition than any other. It is purposed to distribute this bulletin to the members of this association who express a desire to consult it.

No entomologist has made the insect pests of the florist's crop a subject of sufficiently extended study and research, and no really comprehensive and helpful scheme of procedure can be suggested until something of the sort has been done.

A live research committee of this organization might set such a piece of work going by cooperating with persons already in experimental work who are interested along this line, and thus initiate a movement that would prove a large factor in promoting American floriculture.

NEWS NOTES.

Liberty, Ind.—Edward Culley has sold his greenhouses to O. F. Coryell & Co.

Aurora, Ill.—The W. B. Davis Co., vegetable growers, has increased its capital stock from \$43,500 to \$134,000.

Augusta, Me.—A fierce tempest of wind, rain, hail and lightning struck this city on Wednesday afternoon, August 23, and did much damage to fruit and ornamental trees, gardens and greenhouses. The greenhouses of Frank Robbins, the Weeks estate, the Cross estate and Avenue Farm all had considerable glass broken.

Obituary**Henry A. Salzer.**

Henry A. Salzer, president of the John A. Salzer Seed Co., of LaCrosse, Wis., was crushed to death, August 22, on a narrow road in the village of Dresbach, Minn., when his machine, which he was driving, turned turtle. Mr. Salzer was 61 years of age.

Mrs. D. Carmichael.

Mrs. Carmichael, wife of the well known seedsman, Daniel Carmichael, connected for many years with the McCulloughs of Cincinnati, died on Aug. 13th from nervous breakdown after a brief illness. She had had these spells before in previous years but by careful nursing the family had been able to carry her through. She was a native of Glasgow, Scotland, and came to this country with her husband in 1885.

Charles E. Grunewald.

After making a will in which he left all of his property to his employees, Charles E. Grunewald, a florist, ended his life by shooting himself in the left breast last Saturday afternoon in the room where he lived in the rear of his store, No. 924 Madison avenue.

He was fifty-seven years old, unmarried, and came here from Germany forty-five years ago. Andrew Eckrich, who had been employed by Grunewald for twenty-two years, said Grunewald had been in poor health. Four bank books, the lease for the store and other papers were found in an envelope with the will.

METROPOLITAN GREENHOUSES

Thorough In Every Particular

The three things of utmost importance after signing the contract to build a greenhouse, are, Quality, Speed and Economy. This is a basic truth, and absolutely essential to the success of any greenhouse building operation. Our organization is letter-perfect down to the minutest detail.

Along with many other prominent Metropolitan Greenhouse owners, Mr. Martin Metzner, for whom we built the above Greenhouse on his estate at Lake Ronkonkoma, Long Island, will verify our claim that we are capably equipped to build satisfactorily, rapidly and economically.

ELLIOTT AUCTION CO.

42 VESEY ST., NEW YORK

Will commence the Fall Sales

TUESDAY, SEPTEMBER 19th

and will offer on that day 50 cases of flowering bulbs, such as:

Narcissus

Bicolor Victoria, 1st size
Golden Spur, Double
Crown
Von Sion, Double Crown

Hyacinths

Single Blue Johann
Single Pink Gertrude
Single Blue Potgier
Single White B. v. Thuyt
Single White A. Christina

Tulips

Single Belle Alliance
Single Cramoise Brilliant
Single Princess Marianne
Single Rose Hawk
Single Rose Luisante

Single Thos. Moore
Single Rose Grisdelen
Single Chrysolora
Single Yellow Prince

ALSO THE FOLLOWING FOLIAGE STOCK:

25 FICUS Elastica
55 PANDANUS Veitchii
55 DRACÆNA Fragrans

25 KENTIAS FORST., 3-inch pots
25 KENTIAS FORST., 4-inch pots
25 KENTIAS FORST., 5-inch pots

25 BOSTON FERNS, 4-inch
25 BOSTON FERNS, 3-inch
25 DRACÆNA TERMINALIS

NOTES ON CULTURE OF FLORISTS' STOCK

CONDUCTED BY

John J. M. Farrell

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Farrell. Such communications should invariably be addressed to the office of HORTICULTURE.

"If vain our toil, we ought to blame the culture, not the soil."—

Euphorbia jacquiniæflora

This is one of the most beautiful of our winter flowering plants. Its intense scarlet flowered, wreath-like shoots are unsurpassed. It is a free grower, and equally free in blooming; the flowers last well either on the plant or when cut and placed in water. It gives a succession of bloom from a second growth when the plants have been cut. We have arrived at the critical time in culture. Avoid wide fluctuations in night temperature; 60 to 65 degrees at night should be maintained, and in order to do this fire heat is necessary. No plants are more easily and speedily ruined by an excess of moisture at the roots than this plant. Careful attention is required as to ventilation, firing, etc., and watering carefully from now on is of great importance. It cannot be good policy to apply water which is near the freezing point. When the flowers become apparent at the axils of the leaves the plants will be benefited by manure water, which will not only assist the first bloom they make but enable them to push the second growth strong.

Lilium multiflorum

Every florist should include this very fine lily in his trade. While it is quite possible to pot these lilies considerably later and still have them for Easter, the earlier they are potted the better they will be. Do not stand lily pots under the benches. This is a convenient but often a reprehensible practice. A frame, shed, cellar or other frost proof place will be all right for some weeks yet. Do not let the sun shine on them. A soaking after potting should carry them until the bulbs are well rooted. Lilies do better kept on the dry side until the pots are full of roots and top growth nicely started. If kept wet, the roots will rot and the plants speedily show traces of the ever present "disease" which is often caused by wrong culture. Use any good soil and well rotted manure. One of manure and three of soil makes a good compost.

Mignonette

Now that the cool nights are with us mignonette will soon show some growth. Give them plenty of ventilation. Look the beds over often for the dry spots and water them. Give light fumigation every week. Keep all unnecessary side growths removed. See that the plants are well supported to keep the stems upright. Where the plants have been started early the bench in most cases will be filled with roots, so now is a good time to give them a mulch of equal parts of soil and well rotted cow manure about half an inch deep and follow

with another mulch in five or six weeks. On bright mornings they can be syringed.

Orchids

Cattleyas and Laelias above all enjoy plenty of fresh air. There are really but few days in the year when neither top nor bottom ventilators can be open. In the case of strong winds, enough will get between the laps of glass to satisfy them. Watering should be done fairly early in the morning, so that the moisture dropped on foliage and benches will dry up before night. Syringing overhead should be gradually discontinued. When done at all, let it be on the mornings of clear days. Do not play the hose directly on the plants but always use a fine misty spray. It is safer to underwater than overwater. A decreased water supply all around will be necessary now. The question of ventilation is not half considered. It is the rock on which many would-be orchid growers fail—too hot and stuffy conditions. Outside of the purely East Indian tropical kinds, all like air in abundance. See that some of the shading is removed from time to time, so the growth will not become too soft.

Phlox

When phloxes are grown commercially it is essential that the soil be spaded deep, or, still better, trenched. It pays to trench the ground well for this perennial and have plenty of well decomposed manure thoroughly incorporated with the soil. Any extra labor and fertilizer put into the preparation of the border will be repaid for some years afterward in results. From now on up to the end of October is the best time to make new borders or divide and replant old ones. Good varieties to plant are R. P. Struthers, salmon pink, Independence, Le Cygne, Albatre, Jeanne D'Arc, all pure white; Le Soleil, rose, Coquelicot, orange scarlet; General Chanzy, scarlet; Nettie Stuart, white shaded pink, White Swan, pure white, and Rosy Gem, clear rose, etc. Where old clumps are to be divided, it does not pay to cut them in too small pieces. Divide the clumps so each piece will be of good size. Early fall planting will re-establish the plants sufficiently to produce fairly good flowers the following summer.

Reminders

Watch the mignonette for green caterpillars. It is a good plan to dust them with Slug Shot and leave it on.

Where there is ground to spare plant some *Hydrangea arborescens sterilis* this fall. They are fine on account of their great freedom of flowering.

As the nights grow cooler house any poinsettias that have been standing outside, to prevent the loss of foliage.

Keep antirrhinums cool and well aired, so as to make them sturdy. Pinch out the tops of any showing flower.

Importers' trials

The long delays in the transportation of nursery stock, bulbs, etc., which importers have been experiencing are very exasperating and the resulting uncertainties make the lot of the horticultural importer one that is neither easy nor enviable. We have just learned of the arrival in New York this week of a lot of French bulbs shipped from Marseilles on July 12. The condition of the bulbs has not yet been ascertained. A repetition of last sea-

son's discouragements and losses seems inevitable. To what extent our government might be able to mitigate these conditions by expediting examination and facilitating delivery on the arrival of the goods we are unable to say, but we should like to see a little more consideration displayed in that direction. From the view point of the seed, nursery and florist trade most of the governmental activities seem to be of a character to perplex and impede rather than to promote and develop our horticultural industries.

A bond of sympathy

A correspondent in this issue of HORTICULTURE asks the pertinent question, why the geranium growers should not now get a higher price for their product than heretofore. He puts the proposition before our readers in a very practical and we hope, convincing light. The "high cost of living" is enriching the farmer and almost everybody else except the flower and plant grower and the magazine publisher. About every item which enters into the cost of making and selling a geranium or any other plant has gone up except the price of advertising same. That remains where it was. Yet everything that goes to make and circulate a journal has also gone up, except cost of mailing and that one soon is liable to be taken away any day. So the makers of HORTICULTURE can sympathize with the makers of geraniums, the only difference in their respective situations being that the latter can switch over, for such time as they choose, to making something else which offers more lucrative returns, while the former has no alternative but to stick or quit.

Boom the sweet pea

The expected shortage in the supply of lily of the valley for the coming season brings to the front a problem for the florist trade as to how the place hitherto occupied by this flower is to be filled. Lily of the valley has come to be almost indispensable for certain classes of floral work but from present outlook it would appear that people who insist upon having it will be obliged to pay well for the luxury unless some unlikely modifications of existing restrictions on shipments from Europe should be made. In casting about for some flower to acceptably fill the gap, the Roman hyacinth will undoubtedly be a first choice and the quantity of these required by the cut flower trade will be far in excess of the requirements of recent years. But the supply of Roman hyacinth bulbs is this year probably not more than one half the normal quantity. We think one effect of these conditions will be a greatly increased sale of winter-flowering sweet peas, especially the white varieties and this is in all respects a pleasing outlook, in that it gives a stimulus to a distinctly American product and one which possesses every qualification for extreme popularity. Growers having facilities for the winter cultivation of sweet peas for local use or in a larger commercial way will in either case find the investment a profitable one and it is not yet too late to make a start. The finest sweet pea seed ever offered anywhere is that which has been advertised in recent issues of HORTICULTURE. The growth in popularity of the sweet pea since the introduction of the winter-flowering Spencers has been most remarkable but this, we feel sure, is only a small preliminary to what the immediate future will have to show.

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur Ruzicka

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Ruzicka. Such communications should invariably be addressed to the office of HORTICULTURE.

Depth of Soil

MR. ARTHUR RUZICKA,

Dear Sir: In your excellent article in last week's HORTICULTURE, you stated that four inches of soil is sufficient for any rose. Does this apply to grafted roses? Personally, I can never get my grafted roses deep enough in the ordinary bench. Further, I am now in charge of a range of glass which I have recently rented already planted. The previous owner had his benches ten inches deep for sweet peas. He planted grafted roses, varieties Ophelia, Hoosier Beauty, Aaron Ward, Shawyer and Killarneys. At the present time they are in excellent condition but I am anxious to see if the good work will continue in the dull days of the winter. The house is running north and south instead of east and west. The man told me he always grew grafted roses and that the ordinary bench was useless. Will you kindly advise me how to handle them from now on because they require but very little water, a condition that to me is a sign of alarm, although, as I have stated, they are in fine form at present.

Thanking you in advance.

Yours truly,

J. K.

Yes, we figure on using only four inches of soil for all roses, grafted stock included, and we have at present several houses of grafted stock growing in four inches of soil, and the roses that are out are very nice and there are plenty of them too. It requires care when planting to get the ball well into the soil but we would never use more soil if we can help it. Regarding your plants there is little you can do, outside of giving them good culture. It will also be well to let them get fairly dry before they are watered so as to make sure they will have plenty of root. Should the drainage appear poor it would be advisable to let the plants get quite dry, and then fairly flood them. If this is done once or twice, perhaps even three times on stubborn soils, the drainage will be forced. Care should be taken not to dry them off too much, for they would likely suffer a severe check and might lose some of their leaves. Light soils especially require careful judgment as they often appear wet or moist when in reality they are quite dry. Do not apply any mulch to the plants, until after you are sure of their behavior. You can feed liquid manure and dry manures and fertilizers. If you are in the business commercially, and ship to the wholesale market, we would advise you to cut the list of varieties to two in number, more so if the house you have to grow them in is not a very large one. You will find that you will do better that way than with too many varieties. It will be well to keep your plants sprayed with copper and to use lime freely, applying it with bellows as often recommended here, so that there will be little danger from spot, of which I would be afraid if I were in your place, for if it once gets in among the plants it will be an awful job to get rid of it. The way you write you are taking care of the plants per-

sonally, which will be a big help to you, and with good culture you ought to come out all right and then next season you can plant to suit yourself.

Shaking the Plants After Syringing

In the early-planted houses, and more so with Beauties, it will be necessary to shake the plants a little after syringing so that they will be sure to dry off properly before night comes. It will be best to start syringing early in the morning when the weather promises to be good, so as to finish up by eleven o'clock or at noon at the very latest. This will give the plants a good chance to dry off by night and if a nice dose of lime is blown under them at night there will be little danger from spot and mildew. When done the right way the shaking will not take very much time and can usually be done by a boy employed for just such jobs.

Drainage Under the Benches

With winter coming on it will be well to see that there are no water holes under the benches, and if there are see that they are drained. Houses built on filled-in ground with gravel used as fill, will be much healthier houses for roses than those built over a heavy clay soil. The latter should be sloped so as to allow all surplus water to run right off, through some drain provided for the purpose. If the water is allowed to soak into the ground slowly it will make the house very damp and it will be dangerous, especially now when it is too warm to keep a fire, and then occasionally a real cold morning comes along. Drains can be provided at very little expense and the dollars thus invested will bear good interest.

Weeds

It is not too late to cut all the weeds that may be growing around the greenhouses and as soon as they are fairly dry, burning them. As a rule we do not believe in burning anything that could be plowed into the soil as humus but in this case there will be too many weed seeds to make it safe to plow the weeds in. If it were early in the season, so that the weeds would still be green it would be a different thing, but now there are sure to be some weeds that have already gone to seed and it will be much better to burn them and be rid of them once and for all. While this is being done it will be well to see about the drains between the houses so that when they are needed later on they will be open and ready to do the work. The ends of pipes should be screened so that rabbits, muskrats, etc., cannot get in to make a nest and block the pipes. All ditches should be cleaned out clean and stoned if time will permit.

CLUBS AND SOCIETIES

Coming Exhibitions

Sept. 9-10, Boston. Dahlia and Fruit Exhibition, Massachusetts Horticultural Society, Horticultural Hall.

Sept. 11-16, Louisville, Ky.—Kentucky State Fair.

Sept. 18, Orange, N. J.—Dahlia and Horticultural exhibitions of the New Jersey Floricultural Society.

Sept. 22-23, Paterson, N. J.—Fifth annual Fall flower show of New Jersey Floricultural Society at Young Men's Christian Association Hall.

Sept. 23, Maplewood, N. J.—Second annual Dahlia exhibition.

Sept. 26-28, New York, N. Y.—Amer. Dahlia Soc.'s annual show, in Engineering Bldg., 25 W. 39th St. In conjunction with The American Institute of the City of New York.

Sept. 26-29, Chicago.—Vegetable Growers' Association, Hotel La Salle. Annual Convention and Trade Exhibit.

Oct. 7-8, Boston.—October Fruit and Vegetable Exhibition, Massachusetts Horticultural Society, Horticultural Hall.

Oct. 10-12, New Orleans, La.—Eighteenth Annual Convention American Association of Park Superintendents.

Oct. 26-27, Madison, N. J.—Twentieth Annual Flower Show, Morris County Gardeners' and Florists' Society, James Assembly Hall.

Oct. 27-29, Mount Kisco, N. Y.—Fall show of the Northern Westchester County Hort. and Agri. Soc.

Oct. 31-Nov. 1, Greenwich, Conn.—Fall Flower, Fruit and Vegetable Show of the Westchester and Fairfield Horticultural Society.

Nov. 1-5, Boston.—Grand Autumn Exhibition of Plants, Flowers, Fruits and Vegetables, Massachusetts Horticultural Society, Horticultural Hall.

Nov. 1 to 3, Tarrytown, N. Y.—Chrysanthemum show of the Tarrytown Hort. Soc. in Music Hall.

Nov. 8-10, New York.—Annual Chrysanthemum show of the American Institute, Engineering Society Bldg., 25-33 W. 39th St., New York.

Nov. 9-11, Lancaster, Pa.—Fall flower show.

Nov. 9-12, New York.—Fall exhibit Horticultural Society of New York at Museum of Natural History.

Nov. 11-19, New Orleans, La.—Flower show.

Nov. 14-15, Providence, R. I.—Flower show of R. I. Hort. Soc.

The Transactions of the Massachusetts Horticultural Society for 1916, Part 1, has been received. Among the lectures for the season of 1915-16 here published are "The Flowers and Gardens of Japan," by E. H. Wilson, "Garden Writings in America," by Leonard Barron, "Methods Used in Propagation of Plants," by T. D. Hatfield, and "Sweet Pea Diseases and Their Control," by Prof. J. J. Taubenhau.

FLORISTS' CLUB OF PHILADELPHIA.

The September meeting of the Philadelphia Club, held on Sept. 5th, was a notable event, the bright particular star being Eugene H. Michel, of Dreers', on his favorite hobby, the Canna, and right well did he acquit himself. He brought with him from the Riverton Nurseries specimens of all the newest and most up-to-date varieties and talked entertainingly on the merits and demerits of each. We hope to secure a copy of his notes, as they are well worthy of preservation in printed form. The October feature will be October glories in outdoor flowers and the subject will be handled by Wm. Saville of the Michell Nurseries of Andalusia, a rising star among the younger generation of expert growers, with a good overseas reputation behind him, as well as wide experience on this side. He will be well worth listening to and his subject will be illustrated by an exhibit of things in bloom at the specified date—October 3d. The other proceedings, such as nomination of officers, etc., were matters of detail and of only local interest.

CLUB AND SOCIETY NOTES.

The regular meeting of the Cincinnati Florists' Society will be held on Monday, September 11 at Hotel Gibson. There will be bowling after the meeting at nearby alleys.

The St. Louis Florist Club will hold its installation meeting at Sander's nursery, September 14th. As usual automobiles will be in waiting in the wholesale district to convey the members to the grounds.

The preliminary schedule of the flower show to be held June 13 to 16, 1917, under the auspices of the Garden Club of Allegheny County, at Pittsburgh, Pa., has been sent out. The list of premiums is very liberal.

The Gardeners' and Florists' Club of Boston, will hold its opening meeting for the season, at Horticultural Hall, Boston, on Tuesday evening, September 19. It will be a "Ladies' Night" with refreshments and dancing. E. H. Furbush is scheduled to give a stereopticon lecture on Birds.

The Horticultural Club of Boston held its first session for the season at the Parker House on Wednesday evening, September 6. The table was gorgeously decorated with seedling gladioli by William Sim and Scotch heather by William Anderson. When such gladioli as Mr. Sim showed can be grown from seed it would seem almost superfluous to bother about naming varieties for they were in all respects equal to the best class of named sorts.

Meetings Next Week

Monday, Sept. 11.

Cleveland Florists' Club, Hollenden Hotel, Cleveland, Ohio.
Gardeners' and Florists' Club of Baltimore, Florists Exchange Hall, Baltimore, Md.
New York Florists' Club, Grand Opera House, New York City.
Rochester Florists' Association, 95 Main St., East Rochester, N. Y.

Tuesday, Sept. 12

Newport Horticultural Society, Newport, R. I.

Wednesday, Sept. 13.

Cincinnati Florists' Society, Jabez Elliott Flower Market, Cincinnati, O.
Dutchess County Horticultural Society, Fallkill Bldg., Poughkeepsie, N. Y.
Lenox Horticultural Society, Lenox, Mass.
Morris County Florists' and Gardeners' Society, Madison, N. J.
Nassau County Horticultural Society, Pembroke Hall, Glen Cove, N. Y.

Thursday, Sept. 14.

Menlo Park Horticultural Society, Menlo Park, Calif.
New London Horticultural Society, Municipal Bldg., New London, Conn.

Friday, Sept. 15.

North Shore Horticultural Society, Manchester, Mass.

DURING RECESS.

Holyoke and Northampton Club.

The annual picnic of the Holyoke and Northampton Florists' and Gardeners' Club was held Wednesday afternoon, August 30, at the Gallivan Brothers' farm at Smiths Ferry. More than one hundred were present, including the club members and their families and invited guests. A feature of the afternoon was the baseball game between the married and single men. R. S. Carey was captain of the married men's team which won the game, and Ned Hennessey of Northampton captained the defeated team of single men. Visits of inspection were paid to the local greenhouses. Visitors from the state college at Amherst and the Smith College greenhouses at Northampton were present.

The Garden Club, of Newport, has purchased the property in Howard street, known as the Bruen estate, running from Bellevue to Coggeshall avenue. The stone villa and acre of land will be used as the headquarters of the club and minor exhibitions will be held there, while the more elaborate displays will be arranged on a larger field. More property would be acquired in another part of Newport, where the horticultural exhibitions will be held in the future.

The Glory Fern (*Adiantum Farleyense Gloriosa*)

Adiantum Farleyense Gloriosa

THE GLORY FERN or RUHM VON MORDRECHT

This splendid Fern which so closely resembles *Adiantum Farleyense* in appearance and which does not require the special skill and care in growing that is necessary to produce good plants of *A. Farleyense*, has quickly made a place for itself not only on account of the fact that it can be produced for little over half that of growing *Farleyense*, but also because either in a cut state or as plants used in decorative work, it will outlast the old variety ten to one, making it an available subject where *Farleyense* can not be used at all. Since its introduction some 5 or 6 years ago there has never been a supply large enough to meet the demand. With this in mind we have prepared this season an extra large stock, which is in prime condition and we now offer select

3 inch pots, \$2.00 per doz.; \$15.00 per 100; \$140.00 per 1000

4 inch pots, \$3.50 per doz.; \$25.00 per 100

For a Complete list of seasonable stock see our current Wholesale List.

The above offer is intended for the trade only.

HENRY A. DREER

714-716 Chestnut Street,

PHILADELPHIA, PA.

ADVANCING OF PRICES— WHY NOT?

Can any grower give a good reason why he should continue to sell geraniums at the old established price of \$7.00 per hundred in 4-inch pots (and give the pots), a price which was one of the customs in use 15 or 20 years ago, at which time he paid between \$6 and \$9 for his labor and all supplies used were purchased at less than half the present prices? For instance, one grower pointed to a pile of old newspapers used in packing, for which he paid \$15, just three times the cost of two years ago and twice the cost two months ago for the same quantity and he says that \$7.00 per hundred for 4-inch geraniums being an established price, he fears that with an advance he would be unable to move his stock.

I suppose he and all other growers will agree that the market value (so advertised) of geraniums out of 2½ pots is \$25 per 1000 whether he buys or sells and he will also agree to figure the 4-inch pot at one cent, making 3½ cents indisputable cost. He must then figure nine or more other items of expense before the 4-inch geranium is sold—viz, labor, coal, soil, water, fertilizer, rent, taxes, interest on investment, delivery and perhaps some will also figure tools, implements, repairs, etc., all of which are sure expense. In labor and coal we find the greatest expense while the raw material such as soil and water is very small. Under head of "labor" can be figured time spent in growing the plant for market, usually from October until spring.

To sum the above I believe the grower does not obtain a new dollar for the old one on 4-inch geraniums at \$7.00 per hundred.

I also gather from talks with representative geranium growers that none of them will ever pay a very large income tax if they continue to sell at

such low prices. As I stated last week I am not a florist; but coming in daily contact with them and watching their troubles I should like to have some geranium grower explain how he does it.

Sharon Hill, Pa.

P. M. READ.

A HARDY FERN GARDEN.

Our cover illustration shows a small corner in the hardy fern garden which is a conspicuous and always fascinating feature of the extensive rock gardens arranged and lovingly cared for by that distinguished gardener, J. F. Huss, superintendent of the Goodwin estate in Hartford, Conn. In addition to the numerous natural fern genera and species Mr. Huss has gathered together an almost endless variety of forms with exquisitely fringed laciniated and crested fronds, many of them of extreme beauty. Among those which appear in the picture one of the most unusual and conspicuous is *Aspidium corringeanum rosea* pictum, which has pale silvery fronds tinted with pink and bronze. It is not a very rapid grower, but notwithstanding its somewhat tropical appearance, is perfectly hardy and is a veritable gem for the fern rockery.

FRENCH BULBS DESTROYED.

We are sorry to learn that the steamship "Saxonian," which was sunk by a torpedo in the Mediterranean, after leaving Marseilles last Sunday week, carried about two-thirds of the French bulb crop destined for England. It consisted of Roman Hyacinths, Freesias, and other French bulbs. The crop was a very poor one, and the bulbs were small, but it is a loss to horticulture which cannot be replaced this season. We heard on Tuesday that Messrs. Sutton, Carter, Howercroft, and some other big buyers had consignments in this ship, which are all now at the bottom of the sea.—Hort. Adv., Aug. 22, 1916.

Perhaps the same steamer carried a good many French bulbs destined for America as well as England.—Ed.

Early Flowering LONG SEASON Spencer Sweet Peas

for Winter Flowering Under Glass

Since the introduction of Yarrawa Spencer Sweet Peas, great effort has been made on the part of California and Australian growers to produce Early-flowering Spencer Sweet Peas. We offer a list of varieties by one of the most prominent Californian and one of the most prominent Australian growers. One of their chief characteristics is their long season, period of blooming, frequently remaining in bloom for four months. Every one of the crosses were made from the old Early-flowering or Christmas Grandiflora types on the late or Standard Spencers as parents. We feel that there will be little demand for the common or Grandiflora Winter-flowering Type and have, therefore, decided to discontinue offering the same.

Californian Varieties Ready for Delivery August—September

EARLY MORNING STAR

The color is a deep orange scarlet or flame color in standard, with rich, orange-pink wings. The flower is practically the same color as the Late-flowering Spencer Thomas Stevenson. It does not burn out in the open and under glass will be magnificent. The flowers are large and of best Spencer form, and borne in threes and fours in wonderful profusion. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SNOWFLAKE

This is one of the best Early-flowering White-seeded White Spencers. The blossoms are very large and of the best waved Spencer form. The flowers are borne in wonderful profusion on long stems. The form is every bit as good as White Spencer. Pkt., 15 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

EARLY SPRING MAID

Those who are familiar with the Late-flowering Spencer Mrs. Hugh Dickson, will have a good idea of what a handsome variety this is. The color is a light pink on a cream ground, and the blossoms have the same splendid characteristics of Mrs. Hugh Dickson for a florist's flower. It is a most effective flower and, like our other Early-flowering Spencers, it carries a great wealth of blossoms borne in fours on long stems. There is no Early Spencer Cream Pink which is as attractive as Early Spring Maid. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY MELODY

This is a deeper shade of pink than Early Song Bird on white ground, closely resembling Countess Spencer and near Hercules. It might be described as rose pink on white ground. The effect, when bunched, is most pleasing. It is very floriferous. The flowers are borne on long stems and mostly four large, well waved blossoms to each stem. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY SONG BIRD

The flower is the same color as Florence Morse Spencer and Lady Evelyn Eyre, and a bit lighter than Elfrida Pearson. It has the same excellent form and features of Mrs. Hugh Dickson, but is on a white ground. The placement of the flowers is splendid for packing and the flowers are borne on long stems in threes and fours. When in full growth it seemed as though every stem carries four large blossoms. Pkt., 25 seeds, 25c.; ¼ oz., \$1.25; oz., \$4.00.

EARLY HEATHER BELL

This will be one of the most popular shades with all florists, as it will be useful for making up for any occasion. It is a little like the variety known as Anita Wehrman, but vastly superior in every way. The flowers are very large, borne in fours and threes on long, stout stems, and are of beautiful, bold Spencer form. The color is a rich but pleasing mauve, but after standing in water the color becomes a beautiful mauve lavender. Pkt., 25 seeds, 25c.; ¼ oz., \$1.50; oz., \$5.00.

Australian Varieties Ready for Delivery NOW

CONCORD STRAIN

Pkt., 18 seeds each of any of the following varieties, 35c.; 5 pkts., \$1.50

CONCORD PINK. A beautiful, new variety of a most attractive shade of delicate pink. The flowers are large and of true Spencer form. The stems, which are long and strong, usually carry 3 large flowers.

CONCORD CRIMSON. A variety of great merit on account of its glowing color. It is a rich crimson; the flowers, of true Spencer form, are borne on strong, stiff stems.

CONCORD LAVENDER. Without a doubt this is the finest of all Lavender Winter-flowering Sweet Peas. The color is a beautiful shade of rich, rosy lavender. The flowers are of true Spencer form.

CONCORD WHITE. A splendid, pure white variety of wonderful vigor and

substance. The flowers are pure white and of ideal Spencer form, borne three and four to the stem.

CONCORD SALMON. A rich shade of salmon pink and very free flowering. The flowers are borne three and four to a stem and are of true Spencer form.

CONCORD BLUE. This magnificent variety is of a beautiful sky-blue color, sometimes varying darker, the variation, however, being slight. Quite the finest sky-blue we know of.

CONCORD PURPLE. A leader in its color. When first opening, a delightful shade of mauve purple, changing, as the flower ages, to purple blue. The flowers are of ideal Spencer form and quite large.

YARRAWA

The finest Rose Pink Winter Flowering Spencer; the ideal florist variety. Pkt., 15c.; ¼ oz., 35c.; ½ oz., 60c.; oz., \$1.00; ¼ lb., \$3.25; lb., \$12.00.

NEW YORK CITY

NEW HYBRID WATER-LILIES

Climatic conditions in St. Louis during the summer are admirably adapted to the growth of tropical lilies. Within the last four years the aquatic collection at the Garden has been greatly augmented, and the area of water devoted to this fascinating branch of floriculture considerably extended.

Water-lilies may be divided into two groups: (1) diurnal flowering, representatives of the two sub-groups, Anemophya and Brachyceras, and (2) nocturnal flowering, more commonly called the "night bloomers," which are representatives of the Lotos group. During a bright August day flowers of the diurnal lilies will be open between 7.00 A. M. and 7.00 P. M., but if the weather is dull and rainy they remain closed. In the night bloomers the flowers open at sunset and stay open until about 10.00 o'clock the following morning. However, if the weather is inclined to be cloudy, they will remain open during the entire day, acting the reverse of the diurnal type.

The blossoms of the nocturnal lilies are considered by many far superior to those of the diurnal, or "day bloomers," and thus many visitors coming to the Garden during the water-lily season, are disappointed. With this in mind, a number of experiments are being carried on in an effort to improve and fix the few types of day bloomers, the present-day plants having resulted largely from insect pollination, especially the Brachyceras representatives.

The *Nymphaea capensis* and its varieties, commonly found in gardens, are far from the typical species. They are the crosses resulting from insect pollination, between the blue and rose, and possibly the Egyptian *N. caerulea*, until we find gradations of color from the darkest blue to deep pink. These, being self-pollinated, result in a breaking up into blues, pinks, and dark pinks.

One method of selecting the color of lilies to be planted out is to examine the under side of the young leaves, the color which appears here usually giving some indication of the ultimate color of the flowers. This somewhat haphazard method undoubtedly eliminates the tedious work of preparing the flowers for pollination, but is not to be advocated, as the true identification of the parents is always lacking in hybrids of this nature.

Pollination.—Probably the best month for experiments in pollination is August, when the plants have usually attained their maximum growth and are producing their best flowers. Interbreeding must be done at a time when the concave stigmas of the flowers are well filled with nectar, as without this fertilization cannot be accomplished. Experience has shown that the hours between 9.00 and 11.00 A. M. are best suited for this process.

Plants are selected which will produce the desired qualification in the progeny. The pistillate parent, or flow-

ARTHUR T. BODDINGTON CO., Inc., 128 Chambers St., New York City

Boddington's Re-selected Winter-flowering Spencers as grown by Wm. Sim, Cliftondale, Mass.

er which is to bear the seed, is carefully emasculated in the bud stage. This should be done the day before opening, when the stamens are easily broken off and no sign of pollen has appeared. The bud is then allowed to close. The next essential factor is the total exclusion of all insects by enclosing the bud in fine cheese-cloth and tying below the ovary. The staminate parent, or flower which is to supply the pollen, is then selected, also in the bud stage, and is protected in the same manner as the emasculated flower. Pollen should never be removed from anthers which have been exposed to the insect's trail, because of the possibility of foreign pollen being left behind. The second day the act of pollination is accomplished by the aid of a camel's-hair brush, the pollen readily adhering to the brush, especially if it is passed over the anthers with an upward movement. The pollen thus obtained is then deposited on the stigma which is filled with nectar, the nectar immediately changing to a light yellow color. The flower is then rewrapped, securely fastened to a stake, and a label attached indicating the cross. Within three weeks the seed will be ready for collection.—*Missouri Botanical Garden Bulletin.*

Wm. H. Mihm, business manager of J. Bolgiano & Son, and a party of friends motored from Baltimore through the Alleghany Mountains where they have been the guest for the past few days of Charles J. Bolgiano at his mountain home near Mountain Lake Park, Md.

ONE WEEK'S IMPORTS.

Imports at the port of New York, of horticultural material, for the week ending August 18, were recorded as follows:

Bulbs—France, \$1,698; Netherlands, \$15,220; England, \$92; China, \$1,144; Japan, \$18,114.

Plants—Netherlands, \$210; Brazil, \$46; Columbia, \$64.

Red Clover Seed—Canada, \$258.

Clover Seed—France, \$934; Eng-

land, \$6,587; Canada, \$406; Japan, \$871.

Grass Seed—Denmark, \$2,439; France, \$741; Spain, \$4,155.

Other Seeds—Denmark, \$654; France, \$38; Netherlands, \$2,000; Hongkong, \$65; Japan, \$3,633; Italy, \$2,104; England, \$1,966; Trinidad, \$47.

Nitrate of Soda—Chile, \$85,077.

Kansas City, Mo.—The Rudy-Patrick Seed Co. has increased its capital stock from \$100,000 to \$150,000.

SEED TRADE

AMERICAN SEED TRADE ASSOCIATION

Officers—President, Kirby B. White, Detroit Mich.; First Vice-President, F. W. Bolgiano, Washington, D. C.; Second Vice-President, L. L. Olds, Madison, Wis.; Secretary-Treasurer, C. E. Kendel, Cleveland, O.

The time has arrived when our readers are expecting a preliminary crop report. We cannot give a detailed report covering every family of seeds, but a summary sufficiently in detail to convey a fairly accurate idea of this year's vegetable seed crops, at least in so far as it affects standard varieties.

The Pea Crop.

The pea crop is now made for this year, and is one of the first of our important seed crops to mature. It must be borne in mind, however, that the crops are not yet harvested, excepting parts of the earliest varieties, and a protracted period of rainy weather right now might do very great damage, increasing greatly the cost of hand-picking and the shrinkage. Omitting this factor in our estimates, we may say that the condition of the general crop is about as follows. In Wisconsin, Michigan and Canada, Extra Earlies and Alaskas will average slightly above three-fold. The Sweet Wrinkled sorts will be about three fold or slightly under. The yield in Idaho will be about five fold for Alaskas and Extra Earlies. The Large Podded Earlies, such as Gradus, Thos. Laxton, Laxtonian, Pilot and Little Marvel will be about from four to four and one-half fold. The late Long Podded varieties about five to six folds. The old Standard Dwarfs—Nott's Excelsior, Sutton's Gems, etc., will be about like the Gradus and Thos. Laxton type, Champion of England Everbearing, Long Island Mammoth, etc., will average up with the late long pods. In Montana and Washington the yield will be better. Canada Field will not exceed forty per cent. and quite possibly not above 25 per cent. of an average.

Bean Estimate and Prices.

Beans are not sufficiently matured to make definite estimates safe, but certain facts affecting the general situation can be stated. In New York State the bean crop may be characterized as a failure. This applies to commercial as well as seed beans. Cannors who pack string beans have secured 200 to 400 lbs. per acre, when they should have had not less than 2,000 lbs. Conditions in Michigan are much the same as in New York State. Spot White Mediums are selling at \$6.00 per bushel while White Manons and White Kidneys are quoted when procurable at \$7.00 to \$7.50. A large acreage was planted in Colorado mainly in irrigated land, but have not had sufficient water, and the crops are short, estimated at five to six fold. In Montana and Idaho, the yield promises much better, but no estimates are available, and the percentage of the total planted in these states we have not learned. No responsible grower

will make any estimate of deliveries at this time, and will not for several weeks. However, it is a safe bet that few items will be filled 100 per cent.

Corn.

Corn is late, and has suffered more or less by drought and heat. Sound, vital seed corn will sell at good strong prices, and will be in good demand, but manifestly estimates at this time would be mere guesswork.

California Crops.

Excepting Sweet Peas and Salsify, we are informed that standard California seed crops are fairly satisfactory, and barring these two items, contracts will be delivered well towards the hundred per cent. mark.

Just as the above was written information comes to us that culinary peas have been a very disappointing crop in California this year, and that a number of inquiries have been received by eastern growers from Pacific coast seedsmen. Evidently there will be an active demand for high quality stocks of seed peas the coming season. Prices received for green peas in the pod have been uniformly high the present season, and there has been a keen inquiry. Here is another factor that will stimulate demand. Peas are going to be desirable property.

European Crops.

The crop situation in Europe is most unsatisfactory. A large number of items are listed as failures, while many are down to 10, 15 and 20 per cent. These figures cover most varieties of garden beets, sugar beets, kale, chard, cabbage, carrot, parsley, parsnips, peppers, celery, celeriac, herb seeds, chicory, endive, kohlrabi. Mangels range from 10 to 15 per cent., radish 50 to 100 per cent with items occasionally marked failures. One or two items in spinach are marked failures while others are estimated at 20 to 50 per cent. Some items in turnips are classed as failures, most varieties at 10 to 75 per cent and only one or two at 100 per cent. Swedes range from 10 to 40 per cent with one or two failures. Referring to carrots again most varieties are listed as failures and same of celery while nearly half the line of cabbages are in the same list.

An important factor which cannot be ignored is the probability of embargoes being proclaimed against any variety or family of seeds, therefore the European seed situation is uncertain and most unsatisfactory, as one never knows whether goods bought will be delivered.

Vine Seeds.

We have almost overlooked vine seeds, about which we have no very clear information. Such as we have leads to the conclusion that the crop is quite unsatisfactory, and this applies especially to muskmelons and squashes.

Cucumbers will be a light crop though no famine prices are probable. We hope soon to give more detailed information about vine seeds and some other items now clouded more or less.

The Ferry Entertainment.

The entertainment planned by D. M. Ferry & Co., for their canner guests, whom they had invited to visit their trial grounds at Oakview near Detroit, August 11th, proved a great disappointment to them we are informed. Preparations had been made on a scale of liberality characteristic of this great company, but the guests come not, but in small numbers. We learn that a large number of the leading canners were invited, but either because of their being busy or the characteristic indifference of the canners, few responded. It requires much patience and tact to deal with the average canner, as any one who has had the experience can assert.

NEWS ITEMS FROM EVERYWHERE

CHICAGO

Some alterations and improvements are under consideration in the Atlas Flower Store this fall.

R. G. Kootz was in Chicago recently making arrangements for stock for a new retail store in Cincinnati, O., to open about Sept. 15th.

Morgan Park, Chicago's most southern suburb, had a very successful flower show on two days of last week, and the event is going to be an annual affair.

Among the week's visitors were Mr. and Mrs. Richard I. Rollins who with their son had been spending a month's vacation in the East and are now on their way home to Des Moines, Ia.

A. L. Vaughan, who has been connected with the wholesale flower business of Chicago for a generation, and whose opinion is always valued, says the day of the very long stemmed American Beauty rose is forever gone in this market, and commercially it is undesirable. He thinks from 18 in. to 36 in. should be the aim of the grower and that there is use for but very few longer ones.

Mrs. A. L. Vaughan and daughter have returned from a trip through the West and down the Coast. Allie Zech of Zeck & Mann took his family to La Porte, Ind. to spend Labor Day. Charlie Rogers, proprietor of the Washington Flower Market, has returned from a month's stay in Michigan and Indiana. M. C. Gunterberg is the last one to return from the convention. Her trips are well known as business getters and some valuable additions to her list of shippers is looked for.

One who has recently traveled through the west, says one of the queerest sights he saw on the Pacific Coast was in a range of greenhouses for plant growing for commercial purposes. It was quite a pretentious place and made an imposing appearance, but fancy the visitor's surprise when entering the place he found a large proportion of the plants growing in tin cans, which, he was told, is nothing unusual. The high freight rate was said to be the cause, although there are flowers pots manufactured on the western slope.

WASHINGTON, D. C.

The Dunbar Floral Company, of Alexandria, Va., is cutting some excellent summer American Beauty roses.

David J. Grillbortzer, who recently purchased the houses of George Field, has been hauling glass to his place in Alexandria, Va.

It is rumored around town that Samuel Simmons, who up to the first of the month has been employed as the gardener of the Leiter estate, is contemplating becoming a commercial grower.

"Bob" McLennan, of the Bureau of Plant Industry, has just returned from a trip to Philadelphia, Pa., and Camden and Trenton, N. J., where he went to select plants for the grounds of the

Department of Agriculture in this city.

The Leo Niessen Company is planning to open its new store about the fifteenth. Manager Albert Schnell is planning to get everything in shape and the wheels of business running smoothly before the commencement of the fall rush.

Carroll Carrick is spending his vacation in Virginia. Leo Geyer is automobiling among northern seashore resorts. Hardy Pritchard is absent on a two weeks' vacation. They are all employees of Gude Bros. Co. Fred Miller is taking advantage of a two weeks' vacation to motor around this territory; Miss Bessie Pettet is registered at Shadyside, Md., and Miss Nellie Toogood will avail herself of a two weeks' leave. These are in the employ of the Washington Floral Co. Nearby spots were depleted of fish when Ed Niedomanski and George C. Dalgleish got out their rods and lines last week. The former tried out Colonial Beach, the latter Chesapeake Beach—neither caught anything worth while, except when they tell about it. Jake Richards is another devotee of fishing, but he has better luck. Mr. and Mrs. J. A. Phillips, of the Mount Pleasant district, spent a very enjoyable holiday camping near Martinsburg, W. Va.

NEW YORK.

Phil Kessler is back at the helm of business after an extended vacation in the Catskills.

J. R. Lewis, formerly with The Florists' Exchange, is now with R. M. Ward & Co., the Lily House.

C. A. Dards is home from Japan. On his arrival he motored to Boothbay Harbor, Me., where his family had been spending the summer.

Hogewoning & Sons, whose American office is at 32 Broadway have just received a shipment of 400,000 Chinese narcissus bulbs and 500 cases of Dutch bulbs have also come in.

Watch the announcements of the New York plant auction establishments in this issue. These opening sales will to a considerable extent test out the attitude of the buying public on the question of bulbs and fall planting material generally. We have seen some of the stock already arrived and it is exceptionally good.

Johnson & Millang, Inc., are now established in their large and commodious quarters in the Coogan Building and the opening plant auction sale will be held on Tuesday, Sept. 12th, and sales will be held every Tuesday and Friday thereafter at 9 A. M. The first sale will consist of a large assortment of decorative plant stock, together with a heavy consignment of Holland-grown and other bulbs. This source of supply should prove a great convenience for the uptown florist trade. Charles C. Johnson has years of thorough experience in the auction business and Charles Millang is well known among the florist trade. Miss Marie Kneudell will have charge of the office affairs of this firm.

BOSTON.

Mrs. Fred. R. Mathison has sold out her greenhouse property and business to the Janiten & Wollrath Company.

The annual exhibition of dahlias will take place at Horticultural Hall on Saturday and Sunday, September 9 and 10. The many new and improved varieties will be shown and this exhibition will be of more than usual interest. There will be also exhibits of seasonable fruits and hardy herbaceous flowers. The exhibition will be open on Saturday from 12 to 6 and Sunday from 1 to 6 o'clock.

The school gardens exhibition at Horticultural Hall, last Saturday, was an eye-opener. It was the finest and largest school garden exhibition in the history of the movement to turn the attention of Massachusetts school children from the dust of the streets to the rich soil of their own profit-making gardens. The children who have taken up gardening so earnestly in nearly all lines equalled the exhibits of professional gardeners. The Huntington and Copeland school districts of Brockton, which captured three of the four major prizes in the State competition last year, were represented by two big truckloads of flowers, vegetables and canned vegetables. Their cold-packed canned vegetables and fruit exhibits numbered 133 cans. Probably the finest personal exhibit was that of Miss Hermine A. Schulz of Roslindale, who last year received the distinction of being the "only girl who could beat Brockton." She had a whole table reserved for her exhibit of 37 varieties of garden plants and vegetables, all grown on a plot of land less than one-twentieth of an acre in size. In addition to caring for her garden Miss Schulz has canned 375 cans of vegetables and supervised the gardens of 150 children in Roslindale.

PITTSBURGH.

Miss Catherine Friel, manager of the Ray J. Daschbach Company, has just returned from a several weeks' sojourn at Atlantic City. Edward W. Blind, president, and Edward L. McGrath, manager of the Blind Floral Company, have returned from a trip through the east. Ralph W. Pinner spent several days in Youngstown, Ohio, in the interest of the landscape work of the A. W. Smith Co.

Ray J. Daschbach has resigned from the presidency and severed active connection with the Ray J. Daschbach Company, Inc., and hereafter expects to devote his entire time to the floral department of the Kaufmann Company, of which he is manager. Mr. Daschbach is succeeded by Orville Crisman, a young man new to the trade, but who, for the past fourteen years has been prominently identified with the accounting department of a hardware company. The floral fraternity welcomes Mr. Crisman to its ranks, wishing him the utmost success in his new undertaking, which has attended his past.

Obituary

H. B. Denker.

Capt. H. B. Denker, father of Edwin Denker, well-known St. Charles, Mo., florist, and former mayor of St. Charles, died last week at the age of 77 years. Mr. Denker had been sick a long time. Many friends in the trade sent sympathy to the bereaved family. The home was completely filled with flowers.

Mrs. Frederick Heeremans.

Mrs. Frederick Heeremans, 33 years of age, died on the morning of Sept. 4 at her Elmcourt residence in Lenox, after an illness of four years. Mrs. Heeremans was born in Moosejaw, Can., daughter of Mr. and Mrs. W. L. Weston. She was educated in the public schools in Lee and was united in marriage to Frederick Heeremans, superintendent of the Elmcourt estate in Lenox, 11 years ago. She is survived by her husband and two children, William H. and Edith, and her parents, also four sisters. The funeral was held from the Trinity church in Lenox on Wednesday. Mr. Heeremans and the family have the sympathy of a very wide circle of friends, who attested their friendship and respect for the departed by attending the funeral in large numbers.

ST. LOUIS.

Raymond Welty, late in the employ of C. A. Kuehn is now with the St. Louis Wholesale Cut Flower Co.

Adolph Steidel has left the employ at Vandevort's floral department and joined the force of F. H. Weber. Johnnie Burke has taken the position vacated by Mr. Steidel.

Adolph Jaenicke has left the Howard estate as gardener and with his family has gone to Colorado Springs, Col., to enter the employ of the Penrose estate as head gardener.

Fred Strohmeyer, manager for the

New Dahlia Albert Manda.

Ayers Floral Co., was married last week to Miss Ella Weber. Miss Weber is a niece of Fred C. Weber and formerly in his employ at the time Mr. Strohmeyer was also employed there.

NEWS NOTES.

Post Falls, Idaho—W. S. VanDoren has sold his greenhouses to F. R. McCormick.

Newport, R. I.—Mr. and Mrs. James McLeish are preparing to celebrate their fiftieth wedding anniversary on November 12, 1916.

Philadelphia—The 1 P. M. closing on Saturdays has been extended by the Pennock-Meehan Co. to Sept. 9th. This applies also to the 5 P. M. daily rule of July and August.

John Merkel, of Mentor, Ohio, and Miss Kate Kunze, of Brooklyn, N. Y., were married in Brooklyn on September 6.

Flower Market Reports

The tension of the past BOSTON fortnight is gradually letting down and prices show a tendency to moderate somewhat, although there is no decided break and the market is not yet over-weighted with anything. Gladioli are not in as heavy receipt as they were, but there are enough and to spare. Asters are greatly improved and there are some elegant pinks, purples and whites to be seen and these bring a fitting price. We see no carnations as yet. Roses are good, American Beauty included. A good quality of fine candytuft is being received and this finds a welcome in the scarcity of other small white flowers. Dahlias are not making any impression thus far, although it is not far now from the height of the dahlia season.

The trade situation is BUFFALO uneven, some days hustling ones with no stock and others with plenty of stock but no business. Asters of real good quality continue scarce, also gladioli. Roses have been quite abundant at times, but the quality is only ordinary. Some good Maryland, Ophelia and Sunburst are beginning to come in this week. These being from new stock the blooms are small, but they are meeting a fair demand. Beauties are selling rapidly, also lilies.

With cooler weather has CHICAGO come a slight relaxation of the grip summer has had on the Chicago market. A few more flowers and a few less calls for them have temporarily relieved the strain, but with a sudden local demand conditions would be as before. All outside flowers, except asters and gladioli, are gone, unless it be a few tube roses and an occasional bunch of water lilies. Outside calls for flowers continue good and shipping trade is far in advance of local. There is a decided change in the quantity of American Beauties being cut. Stock includes enough long ones for the demand and a good supply of mediums, which are always still more sought for. Asters cover the whole range in quality, with the exception of fancy which can hardly be said to exist, but there are some very good seconds, though by far the greater part of the stock is small and much is inferior. Gladioli are plentiful and in these also stock varies much. Roses are coming with some improvement in length of stem. Cattleyas are very scarce. Lily of the valley are few, but demand is light. Carnations are a little longer in stem, but even so are counted as very short. A few chrys-anthemums are being cut.

Now is the time to get your supply of

Sphagnum Moss

The Best way to have it is in Burlapped bales, No Loss, No Waste.

The Best Value is in the ten Barrel Bales.

Single 10 bbl. Bales, each \$4.00
Special in ten 10 bbl. Bale lots, each \$3.25

Closing hour during September, 5 P. M.
Saturday, September 9, 1 P. M.

CINCINNATI practically all receipts sell readily. Roses are more plentiful than they were and include some excellent Sunburst, Ward, Ophelia and Hadley. American Beauties again are coming in. The aster cut is better and heavier than it was. Gladioli are plentiful but lilies have become somewhat scarce. Plenty of cosmos and dahlias. All greens except smilax are plentiful.

Conditions now seem NEW YORK to point to a weak market with falling values succeeding a rather unexpected spurt in demand and stringency in supply with enhanced prices which followed on the heels of the languid situation recorded in our report of last week. The New York market is the most sensitive and mercurial in existence and prices of flowers bound upwards or rebound downwards on the slightest provocation, the fluctuation in all cases going

to extremes far beyond those reached in other markets under similar exigencies. Of the various crops most predominating at the present moment gladioli fill the largest space. There are many of excellent quality but by far the greater part are inferior—actually the worst we have ever seen anywhere. Dahlias are also numerous and of widely varying quality. Roses are rapidly increasing in daily cut and impress us as of very creditable grade generally considering the date. Lilies are not overabundant and bring excellent prices. Hydrangeas, rudbeckias, marigolds and other outdoor stuff in great variety is being received and finds a better market than in previous seasons.

There has not PHILADELPHIA been much change in the general situation here since our last report. Stock in general has con- (Continued on page 358)

Flower Market Reports

(Continued from page 357)

tinued rather on the scarce side and cleaned up pretty well even for the poorer grades which are still much in evidence. Asters are in good demand especially for the better grades but even now these are not what they have been in former years. Much of the stock coming in is away below par. It has certainly been a very poor season for asters. The dahlia is now to be seen around—good flowers but short stemmed. They are going better than usual on account of the scarcity of good asters. So "its an ill wind that blows nobody good." I suppose cut turnips would sell just now if dyed up a little. Roses are in fair demand and supply not heavy. Russell is still the leader. Some of the (so-called) Prima Donna are to be seen and show up pretty well. Ophelia is also among the good ones. Beauties are in rather better demand. Lily of the valley very scarce. The lily crop seems to be a little off temporarily and prices have advanced. Little change is apparent in the cattleya situation and good flowers are still bringing a dollar each. First cuts of the new carnation crop are arriving in limited quantity—quality fair but short stemmed. Plenty of hydrangeas and tritomas come in handy for decorative work.

There is plenty of
ST. LOUIS stock to be had at any time in this market but as yet it is of poor quality. Roses do not bring much owing to poor quality but they are in plenty. Cosmos is coming now also dahlias. Asters sell better than any other flower. Hydrangeas had quite a call. Tuberose stalks sell well but the demand can not use all that came in. Gladioli are still a good seller. Lily of the valley scarce but lilies are in plenty.

Business here is at
WASHINGTON a very low ebb, and although there are few flowers coming, it cannot be said that there is a shortage in any line. Gladioli, asters and dahlias are the most talked of flowers at this time, the first-named because of its having been more plentiful, of a better quality and more popular this season than ever before; asters because of a crop failure, and dahlias because of the scare given their growers by the unstable weather which prevailed earlier in the season. Lilies sold up well last week. Lily of the valley is only to be had in limited quantities. There are no orchids offered or wanted. American Beauty roses and carnations of the new crops are beginning to come into the local market.

chased, early in 1916, their entire requirement of paper for the various issues of their catalogues during the years 1916 and 1917. This consisted of several carloads of paper and amounted to a considerable outlay of money, but they state that they have already realized a saving of over 100 per cent., with the price of paper still advancing almost daily.

Dear Sir: It will be a decided advantage
as regards prices and quality to place your
order with us.

Soliciting your order through this ad
cuts down the overhead selling expenses
and you positively get lower prices and
better quality. Our terms are liberal and
are a guarantee that you get a square
deal, all bulbs guaranteed true to name or
money refunded.

Write us and upon request we will mail
you our booklet giving prices f. o. b. New
York or Chicago, and we also cheerfully
furnish you with any information that
may be desired. Those of our friends who
will mail us a list of their requirements
will find it has paid them to do so.

Awaiting to hear from you at your pleas-
ure, we remain,
Yours very truly,

Some Important New or Little Known Trees and Shrubs

By JOHN DUNBAR, Botanist, S. A. F.

(Continued from page 316)

MALUS. There are no more beautiful small flowering trees in our parks and gardens in the spring time than the different crab-apples of North America and Asia. *Malus Arnoldiana* is a seedling that appeared from *M. floribunda* a few years since, in the Arnold Arboretum. It is shrubby in habit, and the branches are densely covered with large, showy, rosy pink flowers during the third week in May. *M. glaucescens* is a native American species first detected by myself growing spontaneously in one of the Rochester parks about sixteen years since. It is now found distributed from western New York to the Carolinas. It blooms during the later part of May and flowers about a week earlier than *M. coronarius* and the fruit ripens about a week earlier. The unopened flower buds are reddish pink and before opening have a seemingly inflated appearance; at this stage it is remarkably beautiful. The expanded, delightfully fragrant flowers are rosy pink. *Malus glaucescens* is one of the most beautiful North American small trees when in bloom. *M. Sargentii* is unique amongst crab-apples in its compact, shrubby, spreading, intricately branched habit and seldom exceeds six feet in height. It blossoms about the third week in May and the branches are covered with the pure white, large flowers, which looks very effective in the foreground of ornamental plantations. In the autumn the red fruits are very interesting. Although introduced from Japan by Dr. Sargent twenty-four years since, this crab-apple is still little known in American gardens and parks. *M. Zumi* is a small-sized tree with a somewhat thin branching habit and the leaves on the strong vegetative shoots are often deeply lobed. The flower buds are faintly tinged pink but are pure white when fully open. *M. Zumi* is a beautiful object when in bloom, covered with its large pure white blossoms. It was introduced by Dr. Sargent from Japan, twenty-four years since.

PRUNUS. Sargent's Cherry, *Prunus Sargentii*, is one of the most beautiful of Japanese cherries. It was introduced from Japan by Dr. Sargent twenty-four years since but at that time its botanical status was not understood. Mr. Wilson, studying Japanese Cherries, in Japan in 1914, found an avenue of this cherry, three miles

long, at Koganei near Tokio, and some of these trees were sixty to seventy-five feet tall. They were planted in 1735. The clusters of large, pink or rose-colored blossoms are produced in great abundance just before the leaves begin to unfold. It has handsome ample foliage and it should be widely planted in American gardens and parks. Our largest individuals are about eighteen feet tall. *Prunus mira* is a new species of peach found by Mr. Wilson in western Szechuan near Tachien-lu. Mr. Wilson regarded this as a remarkable discovery, as previous to this only one true species of peach was known. It has the peculiarity of having a perfectly smooth stone. The leaves are much narrower than in the common peach, deep glossy green and perfectly smooth. We have an individual nine to ten feet tall and fifteen feet in spread of branches but I am surprised and disappointed that it has not produced a single flower and the young wood passes the winter in perfect condition. We sincerely hope that it will flower next spring. This tardiness in flowering seems surprising as the common peach flowers so freely in a small state.

AESCULUS. During recent years a number of new species of buckeyes have been discovered in different parts of Texas, Missouri, Georgia and adjacent regions. All of them are excellent garden plants. We will call special attention to one form: *Aesculus discolor* var. *mollis*, (*Aesculus Austrina*),

is a shrub or sometimes a small tree and is distributed through southeastern Missouri and from Georgia to Texas. It flowered with us last spring for the first time. The scarlet flowers far surpass in brilliancy any of the cultivated red-flowering *Horsechestnuts* that are cultivated in parks and gardens. It is remarkable that it seems to be quite hardy so far north of the region of its natural geographical distribution.

EVODIA. The *Evodias* are entirely new features in northern gardens. All of the known *Evodias*, until these new species were found in western China, were warm greenhouse shrubs or small trees. We have three species but *E. Danielii* seems to be the hardiest and is the only one that has flowered with us; it has blossomed for several years. It has opposite, large, handsome, compound leaves, with seven to eleven leaflets which have a strongly pungent aromatic odor when bruised in the hands. The terminal, compound, corymbose, whitish flower clusters are borne on the branches and branchlets about the second week in August.

CRATAEGUS. The discovery and description of about one thousand species of American hawthorns and the raising from seed of most of them, and their cultivation, is surely one of the most extraordinary botanical and horticultural features of modern times, which has been accomplished at the Arnold Arboretum. Twenty-five years ago only fourteen species were

PLANTING A RAILROAD EMBANKMENT
At Wayne Junction, Philadelphia.

recognized by American botanists. The American hawthorns are widely distributed throughout eastern North America. They are particularly abundant along the streams and rivers that run into Lake Ontario. I have studied and collected them throughout western New York, and Ontario, Canada, from London to Ottawa and down the St. Lawrence River as far as Prescott. It is quite remarkable that this vast array of species, in one genus, all come true to seed. Observation has shown that the progeny of the type species comes absolutely true to the parents. When we consider that *Crataegus* is close to some genera like

BAILEY'S NEW STANDARD Cyclopedia of Horticulture

Six large quarto volumes.
More than 3,600 pages. 24
exquisite full-page color
plates. 96 full-page sepia
halftones and more than
4,000 text engravings. 500
collaborators. Approx-
imately 4,000 genera, 15,000
species and 40,000 plant
names.

The new Standard Cyclopedia of Horticulture has been freshly written in the light of the most recent research and experience. It is not merely an ordinary revision or corrected edition of the old Cyclopedia, but it is a new work from start to finish with enlarged boundaries geographically and practically; it supersedes and displaces all previous editions or reprints of every kind whatsoever. It is both an Encyclopedia and a Manual, for with the aid of its Synopsis and Key, amateur and professional alike may quickly identify any plant, shrub or fruit contained within the set, and then receive expert instructions for its cultivation. Price \$6.00 per volume. Four volumes have now been issued and the others will follow in succession. Order from

Hammond's Thrip Juice No. 2

REGISTERED

A Contact Insecticide, Useful and Reliable, Used for 30 Years in Green-houses, and on Plants, Grape Vines, Trees and Shrubs

Some common Sucking Insects, magnified.

HAMMOND'S PAINT & SLUG SHOT WORKS, Beacon, N. Y.

apples, pears, plums, and Amelancheiers, that hybridize freely, this phenomenon appears quite remarkable. They are excellent subjects for the planting of gardens and private estates. They are very showy in bloom in spring and early summer, and the showy fruits, in varying tints of scarlet, crimson and vermilion red which extends throughout the different species, from August to early winter, make them splendid objects for landscape adornment. They are exceedingly virile and hardy.

I was asked by a prominent American landscape gardener, about two months since, if I would name a dozen showy species that would show representative characters in habits, flowers, and fruits, for landscape planting. I confess that this is a hard problem with such a vast number of species and many of them of splendid merits. I, however, submit twelve species that are very ornamental and vary in habit from trees of considerable size to arborescent shrubs, and give a fine display of fruits from August to early winter. I do not say that the following are the best but that they are highly ornamental: *Crataegus Arnoldiana*, *C. Arkansana*, *C. Dunbarii*, *C. Durobrivensis*, *C. Ellwangeriana*, *C. fecunda*, *C. gloriosa*, *C. Jackii*, *C. Laneyi*, *C. nitida*, *C. opulens*, and *C. submollis*.

DAVIDIA. *Davidia involucrata* is a remarkably handsome flowering tree from north-western Szechuan and has received the common name of Dove Tree. It is described as having two large, unequal, creamy white bracts proceeding from the base of the flowers, which are remarkably conspicuous at a long distance. We have one individual over ten feet high which has not flowered with us yet. I do not think it has flowered in cultivation except in France and in England. We are extremely anxious to see it flower. I am of the opinion that it resents pruning. We have lost a few plants, we believe, on account of this. Removing suckers or pruning to one stem as we treat an elm, oak, or maple, we think it resents. We shall leave it alone hereafter and allow it to grow in its natural manner.

CAMBRIDGE, MASS.
NEW YORK, N. Y.**COLLECTING DEBTS BARRED BY
BANKRUPTCY PROCEEDINGS**

This bears upon the legal effect which bankruptcy proceedings have on a man's debts, particularly upon the question of collecting an old debt after the debtor has gone through bankruptcy:

Baltimore, Md.

We have a customer who, before he got mixed up in some mining deals, did a large business and used to buy large quantities of goods from us. For several years he paid promptly, usually discounting. A year ago he became involved and finally went into bankruptcy, owing us about \$1,500. It was a bad failure, we only getting about 13 per cent. His bankruptcy case is closed and he has been doing business again in his own name for several months. When he again went into business he came to us and asked for credit. Naturally we were not very desirous of extending it to him, after having been mulcted by that large sum, but the man had good backing and some chance of inheriting a large sum of money, so we agreed to give him a small line, provided he would agree to pay off the balance of the old account. It was his own proposition to do this, and he agreed to do it before two witnesses besides myself. The promise was to do it within six months, and on the strength of this we extended him the credit. The six months expired last week and we made demand on him for the money. He paid no attention, and after repeated letters he came to our office and said that when he made the promise he did not know that his bankruptcy excused him from the debt. He said he could not pay and had no intention of paying, as his bankruptcy closed everything up. Please advise whether we have any chance of getting anything.

E. K. MULLENBOW & BRO.

You have an exceedingly good chance, if the man has anything. If he has nothing now, but is likely to have, I should get judgment against him and wait till something comes into his hands.

A bankrupt can always make himself responsible for his old debts, after he has been discharged in bankruptcy, if he chooses to. If he does choose to, he is just as liable as if he had never gone through bankruptcy.

Ordinarily bankruptcy proceedings operate to relieve a bankrupt debtor from liability from all debts which are provable against him, even though they were not proved against him dur-

ing the bankruptcy proceedings. It is the place of the creditors of a bankrupt to come forward and file their claims. If they fail to do it, they are out.

Bankruptcy proceedings do not wipe off all classes of debts, however. For example, an obligation to pay alimony; or the lien of a recorded judgment, or attachment, or mechanic's lien, or mortgage; or a vendor's lien; or debts incurred by fraud; or liability to pay somebody damages. Debts of these classes are left alive by bankruptcy and can be collected just the same after as before. But the ordinary commercial debt such as money due for goods sold and delivered, is wiped out, whether the creditor comes forward and puts in a claim or not.

But it can be revived again if the debtor wants to revive it. Bankruptcy proceedings don't extinguish the debt; I was a little inaccurate when I said it was "wiped out." Bankruptcy merely prevents a creditor from collecting the debt. The debt still exists as a moral obligation. It is the same with a debt outlawed by time—it is not dead, but sleepeth, and it can be revived. The creditor is simply deprived of his remedy.

How can such a debt be revived? By a new promise. The promise which this Baltimore correspondent's customer gave is precisely the sort of promise that revives an old debt. Although in this particular case it did have consideration—the agreement to grant new credit—it needed no new consideration at all. The existence of the old debt as a moral obligation supplied the consideration.

The promise need only be express, positive and unconditional. "I guess I'll pay that off," is not enough. "I know I owe it," is not enough. "I'll fix you up some time," is not enough. "I'll pay that old debt as soon as I'm able," is enough if you can prove that the debtor has become able.

Except in a few states the promise does not even have to be in writing. It does have to be in writing in the following: Arkansas, Georgia, Kentucky, Maine, Massachusetts, Michigan, New York, North Carolina, Pennsylvania, South Carolina, Texas and Vermont. In all states it is always better to get it in writing, but very often that is not practicable. It would put the debtor on his guard. Often former bankrupts will make such promises in the belief that they won't hold. To ask them to put them in writing would spoil the whole thing.

So that this Baltimore correspondent can collect his money—if his debtor has anything to pay with—and so can any other creditor who can induce his former bankrupt debtor, after his discharge in bankruptcy, to promise to pay.—(Copyright, July, 1916, by Elton J. Buckley.)

Dangerous to Believe

"There's a saying old and rusty
But as good as any new
That says: 'Never trouble trouble
Until trouble troubles you.'"

Now that may be all very well in some things; but it's a mighty dangerous thing to follow when it comes to heating.

Of course, there are a lot of growers who seem to absolutely refuse to read trouble signs; and never replace an old boiler until it gives completely out.

Sometimes they put off putting in a new boiler; because they think it's saving money. But old boilers are quite like old autos—they "cost more than they come to."

You never know, just what will happen next

It's good business to let your little troubles; trouble you just enough; to keep you out of bigger troubles.

Trouble yourself enough right now to order your Hitchings Boiler.

Order it now.

NEW CARNATION COTTAGE MAID

A sport of Mrs. C. W. Ward

A new carnation of a delightful shade of flesh pink, somewhat darker than Enchantress.

IT NEVER FADES

When the hot sun comes along in the spring, COTTAGE MAID takes on a deeper hue until June it is almost the shade of Gloriosa.

It has all of its parents' fine qualities as a commercial carnation.

Order now and get early cuttings. Orders shipped in season.

Price for rooted cuttings:
\$12 per 100, \$100 per 1000

ROSE GROWING UNDER GLASS

CONDUCTED BY

Arthur Ruzicka

Questions by our readers in line with any of the topics presented on this page will be cordially received and promptly answered by Mr. Ruzicka. Such communications should invariably be addressed to the office of HORTICULTURE.

Cover Crops

Do not neglect to sow rye with a little vetch on all ground that will lie exposed to the weather this coming winter. It is not too early to sow same, and where the corn is still uncut it can be scattered right in between the rows and worked in with a cultivator or even by hand. It will pay to do this for if there should be any soil left exposed to the weather it will leach badly and the plant food that was put in will wash away a good deal. This is more true of hilly or sloping grounds. If planted early enough to rye and vetch, the roots of the two will work into the soil and gather up a large quantity of the plant foods and hold same. The rye will also catch and hold any plant food that may be dropped around in the winter time, thus making it safe to haul manure when other work is slack without danger of losing most of it through washing. The rye can be ploughed under in the spring and the lots sown to grass to grow sod. By adding a little green house soil later, the sod thus grown will be just what is needed in the rose benches. Of course it will have to lie at least three or four years to get the proper fibre, but by working up a piece of land every year there can always be a good supply of nice sod on hand.

The Fires

Heat will be needed in the greenhouses very shortly and if the boilers have not already been turned on, it will be best to have them ready to turn on at a minute's notice. See that they are overhauled and all broken parts replaced. The cool nights will make the houses run too cold, and with the hot days the difference between the day and night temperature will be too great for the welfare of the roses. The temperature in the rose house should not be allowed to drop below 64 at this time of the year, and with certain varieties it will be best to carry the houses at 68 with plenty of air. It is poor policy to close tight at this time of the year in order to save a little coal. Where there is no steam in the houses and growers have to depend on hot water for their heat it will be best to close all the pipes save one coil. This will give the necessary heat and at the same time will insure good circulation. As soon as steam is turned on it will pay to go through and apply a little sulphur to the pipes, taking one coil all around the house and applying a coat of sulphur to it every ten or twelve feet. Out of every sixteen feet of coil, four feet will be painted with sulphur. Where high pressure is turned into the pipes a little lime will have to be added to the sulphur in order to weaken it and keep it on the pipes longer so that it will not evaporate too rapidly and make the sulphur fumes too strong, thus doing more harm than good. A little sulphur can be applied to all the houses even though there is no sign of

mildew. If there is a speck somewhere the fumes will be sure to do away with it and it will have no chance to spread later. Care should be taken to keep the steam even so that the temperature will not be going up and down. The ventilators should never be opened at night to reduce the temperature in the houses after too much heat has been applied.

Manure for Mulching

Keep manure coming all the time in order to have a good supply on hand when it will be needed for fall mulching. Also see that the manure that was brought up some time ago is kept turned over all the time so that there will be no danger from burning. If there is no shed provided for storing manure a good place to put it will be on low sod heap so that any liquids that may leach out will go into the sod and can thus be utilized. At any rate there should be a good layer of sod under the manure piles so as to save every particle of the manure. Even if a dairy is kept and the supply is abundant, no part should be allowed to waste as it is about the best plant food that can be bought.

Painting

With help scarce and materials very high, growers will think how much cheaper they could have done their painting last year. This will do very little good however, and the only way to save the houses is to do as much as possible this year even if it does cost more money. It will be well worth while. Not only will the houses be preserved but better roses can be grown, as there will be more light, and if the work is done right there will be no leaks to drip, drip, drip down on the plants all winter long. The place will also look better and there will be far more satisfaction running it. Houses that are real bad, with very loose glass and the putty all gone or loose and very little paint on the bars, had better be done all over, and that means taking all the glass out, painting the bars well and then reglazing again. All loose and blistered paint should be carefully removed, and the first coat of paint applied fairly thin and well brushed in. The second coat can be thicker and floated on instead of brushing out. Bare wood or new work should have three coats of paint, the first two fairly thin so that the paint will stick. If only one coat of thick paint is given the wood will quickly absorb all the oil and the paint will soon crack and peel off. Pure raw oil and white lead should be used with a little touch of drier. Very little of the latter should be used however. Some growers will prefer ready mixed paint, and when bought from good reliable dealers this may be the best for certain places, especially where the help is not what it might be. The lead and oil require quite some stirring to properly blend the two together.

Mutations of the Dahlia

The dahlia is well to the front in the exhibition halls just at present and, should Jack Frost delay his coming, it will so continue for a time but no one can say within forty-eight hours when the gorgeous flower of late summer may be ruthlessly levelled and therein lies one of the dahlia's weak points as a garden ornament and as a cut flower. At most of the shows this season the peony-flowered section, although of but recent recognition, seems to be taking the precedence in the novelties presented, the number of exhibits and in public interest and admiration, supplanting to a considerable extent the cactus varieties, lately so popular, as well as the older show, fancy, pompon and single sorts. How long the big, dashing peony-like blooms will retain their prestige is a question depending much upon the good sense of the introducers and the conservative attitude of the societies under whose auspices awards are made. The dahlia, in common with the peony, chrysanthemum, gladiolus and many other things which have been the subjects of much special breeding, has suffered and is suffering from the unreasonable multiplication of named varieties. There have been thousands of dahlias named where even hundreds would have been an overdose. Here is where the latest idol—the colossal peony-flowered type, will need and should be given protection, for, with the present tendency away from exact specifications of form and other determinable qualities and the absence of arbitrary standards, anything monstrous or fantastic can now get into the running and such can naturally be produced ad infinitum. A resolute weeding out of the old time lists and unsparing sifting of new candidates would seem to be the American Dahlia Society's foremost duty.

It can't be done

A short time since, HORTICULTURE declined to accept an advertisement from California, of a "hybrid Oak-Walnut". Later, we were somewhat surprised to see the same advertisement appear in our New York contemporary and we are now still further surprised to find an editorial note in the columns of our contemporary which appears to be an attempt to confirm the absurd claims made by the aforesaid advertiser. Our editorial friend mentions as proof that he had "seen a Walnut and Chestnut hybrid in the renowned arboretum of the Vilmorins, some twenty miles or so out of Paris." "This," he says, "does not take a compound name combining the two genera, as might be expected but was simply called Juglans Vilmoriniana." Juglans Vilmoriniana, as is well known, is a hybrid between Juglans nigra, the Black Walnut, and J. regia, the English Walnut. The first mention of it which we have knowledge of was by Carriere in the Revue Horticole for 1863, p.31. Monsieur Maurice Vilmorin gave an account of it in Garden and Forest, Vol. IV., p. 51, with illustrations of the fruit and of the tree growing at Verriers; the tree is now about ninety years old. The general name for the J. nigra x regia hybrids, of which there are several, is Juglans intermedia. In the neighborhood of Boston, Mass. there are growing several large trees of a hybrid between J. cinerea, the "Butternut," and J. regia. It seems superfluous to say to our readers or to remind our esteemed contemporary that no instance of hybridization between members of two natural orders has ever been known. The supposed Oak-Walnut hybrid of the California advertiser is simply an abnormal seminal form of Juglans Hindsii which has been named var. quercina, and is so described in Bailey's Standard Cyclopedia of Horticulture, Vol. III., p. 1722.

Looks like faulty methods

The contributors in this paper, from Illinois and the other far in Pennsylvania, comment on the regrettable condition in the flower trade immediately following a day on which flowers are largely called for, when market values drop to a disastrous level. The florists all know these facts but what have they ever done by way of remedy? Dealers in other commodities, when slack times occur, turn to advertising and special sales for relief but the average florists' tactics are just the reverse. Who ever knew of any systematized attempt to work off the lagging product of the florist, say week after Easter? But—before Easter, before Mothers' Day, before Christmas—when he is assured of all the business that can be handled at reasonable prices, he jumps into advertising for more! See the point?

THE RAISING OF WINTER-FLOWERING BEGONIAS.

In order to obtain plants of the tuberous section of *Begonia* for crossing with *B. socotrana*, which flowers during autumn and winter, it is necessary to make preparation betimes. Good strong growing kinds should be selected and kept in as cool a situation as possible in a cold frame throughout the summer. The plants should be potted up late and grown in moderately small pots. The colors most wanted are a good pure white, yellow, and crimson. The other parent, *B. socotrana*, must be started early in moderate heat, and encouraged to grow on quickly. When the plants are coming into flower they should be brought into a dry, airy house, with a night temperature of about 55 degrees. The plants should be so placed that they receive all the sunlight possible, for in such circumstances the male flowers produce pollen more freely, and fertilization is effected more easily. It should be noted that, as a rule, the anthers of *B. socotrana* do not burst, and to this fact many failures are to be attributed. To get over this difficulty the stamens should be gathered when fully developed, and placed in a dry part of the house. When the anthers seem to be ripe, their tips should be cut in order to allow the pollen to escape. It is sometimes necessary to shake them well, to liberate the pollen. Generally, however, enough pollen is produced by one male flower to pollinate two or three female flowers. After the flower has been fertilized it should be staked, and supported with raffia or other tying material in order to keep it from drooping, as it is apt to do so late in the season.

The seed ripens fairly quickly, and as soon as the seed pods begin to turn brown they should be watched attentively in order that the seed may be gathered before the pods burst. The seeds should be sown at once, in small pots or pans, and they should produce plants which will flower in the following autumn.

I had less success with *B. socotrana* as a seed parent, for it does not seed freely with pollen of plants of the tuberous section. Of the many winter-flowering varieties which I raised, John Heal and Winter Gem are the only kinds produced from *B. socotrana* as the seed parent.

Of the many varieties raised by making the cross the other way I need not speak now. They include Acquisition, Fascination, Mrs. Heal, Scios, Exquisite, Her Majesty, Optima, Rosalind—all single flowered—and Ensign, Ideala, Julius, Winter Cheer, Etatior, Success, and The Gem, with semi-double flowers.

The only hybrid obtained by crossing tuberous *Begonias* with a winter flowering hybrid was Adonis, which was produced by crossing an orange-scarlet tuberous variety with John Heal.

None of the new race of winter-flowering hybrids has produced seed either by cross or self-fertilization, and in this they are in marked contrast with the tuberous section, which seed freely.—*John Heal, F. M. H., in Gardeners' Chronicle, London.*

EUPHORBIA TRIANGULARIS.

The photograph from which this cut was made was sent to us by Theodore Outerbridge, proprietor of Sunnylands, Bermuda, and represents a specimen growing there thirty feet high. It is locally known as "Candelabra Cactus," but as the botanical name indicates it is not a cactus but a near relative of the popular Poinsettia which also grows freely in the gardens of Bermuda.

GROWING RHUBARB.

EDITOR HORTICULTURE:

Dear Sir: Can you give me through your columns a little information about rhubarb raising. I am starting in with a small greenhouse. I am told that rhubarb can be sold through the winter with profit and can utilize the floor space under benches for growing it. What I want to know especially is about taking it up from outside. Should roots be allowed to freeze in the ground before digging? Or, should they be taken up earlier and left lying out until frozen? And how should they be set in the greenhouse and what care is required?

A SUBSCRIBER

It is better to lift the roots before frost and leave the clumps outside covered with about an inch of hay or loam until they get ten or fifteen degrees of frost. Then remove them to a cellar or under greenhouse bench where they can have a temperature of 55 to 60 degrees. Place them closely together filling the spaces with earth. In commercial rhubarb cellars they use a 6-inch compost of two-thirds horse manure and one-third loam. This should be composted and turned over in the heap outdoors, several times for a period of two days. Take up large clumps, say one to two feet across, as good results can not be had from small or inferior roots, and leave all the soil possible on them. After having been forced once they are useless. Light is not needed—in fact, the stalks produced in darkness are preferable in quality and color. After they have started to grow they will require plenty of moisture.

ADVANCING PRICES—WHY NOT?

The Easter lily when in condition previous to Easter Sunday will bring 8c. or 10c. per flower and bud. After Easter they can hardly be given away for the hauling. This is well known to all growers, yet the grower buys bulbs at prices of \$35 to \$100 and upwards, pays \$30 for his pots—grows the stock for 6 or 7 months and if he has made a good guess as to weather conditions previous to Easter he will get 10c. per flower. Should the guess be wrong, he will have to accept much less.

Here is a condition where the grower makes or breaks himself as far as lilies are concerned; but why not make it right? The bulb and other supply men have to get their money anyhow, and with poor weather the whole winter's work on lilies has been at a loss. Coal has advanced, fertilizer has gone up, because of scarcity of the chemicals used in the manufacture. Labor has increased almost "out of sight" and the only fixture we have is sunshine and even that was rather scarce this spring especially. Now a partial solution to this is a slight advance in the selling price,—a cent or two should be added—less stock grown and grown better, and more attention paid to the costs involved in running the house.

I recently had a talk with a grower who states that it pays him to have an expert accountant one or two days each month and this accountant has so far paid for himself by showing in dollars and cents just which stock has made or lost money during the monthly periods. I expect in a short time to have his figures to look over and will try to pass them on for the benefit of all. He tells me that during June he lost money on bedding plants and that next June he will increase his prices. Now this grower has been losing money for years on bedding work and like many others did not know it. How about your own profits?

P. M. READ.

Sharon Hill, Pa.

A HEMLOCK HEDGE.

At all seasons of the year, whether mantled with snow in winter, tipped with light green new growths in spring or in the more sombre green of late summer, this most graceful of all the conifers has no superior for evergreen hedge purposes, all through the northern United States. A hedge of *Tsuga Canadensis*, any height from three to fifty feet is a thing of beauty.

A WALK THROUGH THE WOODS.

A walk through the woods in September
Is like a dream I can never deny.
The leaves that glow like emeralds
And the mosses the tree and the vine
And the sky for my foot
With sun and with soil
The priest and the priestess
And I am walking with God.

Like a hymn of light
As a rosary prayer,
And set to the loftiest measure,
The forest an anthem sublime,
No man's teaching dependent
From cant and from creed I am free;
And the priest and the priestess
And I am walking with God.
—Boston Teacher.

CLUBS AND SOCIETIES

NATIONAL ASSOCIATION OF GARDENERS.

An executive meeting of the trustees and directors of the National Association of Gardeners was held at the Murray Hill Hotel, New York City, on Thursday, September 7th, President W. N. Craig presiding. Letters were received from Vice-President Theodore Wirth, of Minneapolis, Minn., and Director Thomas W. Head, of Lake Forest, Ill., both reporting a constantly increasing interest among the gardeners of the middle west and west towards the National Association and recommending that the organization's annual convention be held in some western city in the not distant future.

The action of the Bureau of Standards, of the Board of Estimate, of the City of New York, recommending a higher scale of salaries for the gardeners employed by the New York City Park Department was officially brought to the attention of the meeting. A resolution was adopted endorsing the Board of Estimate's action and calling for the support of the Mayor and the Park Commissioner of the City of New York towards securing the adoption of the measure when the 1917 budget comes up for consideration.

The recent discussion in some of the New York daily papers on the poor compensation gardeners receive in some of the public institutions was also brought to the attention of the meeting. While the existing conditions were discussed and severely condemned, as the matter was not officially before the meeting, however, no recommendations were made.

It was decided to offer the association's silver medal for competition to all horticultural societies or gardeners' clubs who desire to accept the offer. The terms of competition (to be for 1917) are left to the local societies as to whether it should be for one of its shows or for monthly competition, the only restriction being that the competitor must be a member of the National Association of Gardeners. The plan of the National Co-operative Committee to provide essays for the monthly meetings of the local horticultural societies, which it has done during the past year, was approved, and it was decided to continue to supply these essays to the some fifty odd societies throughout the country that applied for them.

The appointment of John Canning, of Ardsley, N. Y., as director was announced, to fill the unexpired term of James MacMachan, deceased, whose term expires Jan. 1, 1919.

It was voted to hold the next annual convention during the early part of December at Washington, D. C. For the 1917 convention Chicago was voted as the choice of the meeting. Pittsburgh was also favorably discussed as the 1918 meeting place.

Following the adjournment of the meeting some of the members coming from a distance visited the estate of Adolph Lewisohn, Heatherdell Farm,

THE HORTICULTURAL SOCIETY OF NEW YORK.

The Horticultural Society of New York, in cooperation with the New York Botanical Garden, will hold a dahlia exhibition on Saturday and Sunday, September 23 and 24, in the Museum building, New York Botanical Garden. The prizes for this exhibition are offered by the New York Botanical Garden from the income of the William R. Sands Fund. The exhibition will be open from 2 to 5 P. M. on Saturday, and from 10 A. M. to 5 P. M. on Sunday. It is hoped that all interested in this popular flower will make entries and help to make the exhibition large and attractive. Schedules are now ready for distribution and will be sent upon application to the Secretary, George V. Nash, The Mansion, New York Botanical Garden, Bronx Park, New York City.

GEORGE V. NASH, Secretary.

MASSACHUSETTS HORTICULTURAL SOCIETY.

The dahlia and fruit exhibition on Saturday and Sunday, September 9 and 10, made a very attractive spectacle which was visited and admired by many people. Gladioli were almost as abundant on the tables as dahlias and these two specialties together with the collections of herbaceous border plants and native wild flowers made a glowing expanse of color.

The principal exhibitors and prize winners were J. K. Alexander, W. D. Hathaway, Geo. L. Stillman, Fred. P. Weber, Fottler, Fiske, Rawson Co., Mrs. L. A. Towle and George Ott on dahlias; J. K. Alexander and Wrentham Dahlia Gardens on gladioli; Faulkner Farm and Blue Hill Nurseries on herbaceous perennials. The sensation of the show and, in our judgment, one of the finest dahlia acquisitions in several years, was the peony-flowered dahlia Mrs. Frederick Grinnell, a seedling of 1911, grown and exhibited by John P. Rooney. The flower resembles an enormous peony but its chief claim to the silver medal awarded is its color which is a deep pure pond lily pink, unlike any other dahlia we know of. There was another dahlia, Meritorious, exhibited by Emerson W. Bennett, a seedling of many colors, which received a well-merited certificate of merit. A silver medal was awarded to Fottler, Fiske, Rawson Co. for an extensive and very fine collection of named dahlias and gladioli.

The fruits and vegetables were displayed in the small hall. Thomas T. Watt received honorable mention for his prolific tomato Watts' Wonder, a cross between Stirling Castle and Dawson's Plum. The fruits were shown on the vine in enormous clusters. There were some excellent hot house grapes from Mrs. John C. Whitin.

HOLYOKE AND NORTHAMPTON FLORISTS' AND GARDENERS' CLUB.

The monthly meeting was held Sept. 5 at the Massachusetts Agricultural College, on invitation of Prof. Nehrling. A hardy perennial garden has recently been established and is receiving much attention from visitors. The business meeting was called to order by President Butler, and plans for the coming show were discussed. Prof. Nehrling read two papers received from the National Association of Gardeners, one on "The Diabrotica," by R. A. Sell, of Texas, the other on "The Iris Worm," by T. S. Snow, of Penn. A general discussion on insect pests followed. Several vases of perennials were on the table from the college garden and H. E. Downer showed *Senecio clivorum*.

H. E. D.

CHICAGO FLORISTS' CLUB.

The Chicago Florists' Club held its first meeting of the season at the Morrison Hotel, Sept. 7, with sixty in attendance. Interest centered on the paper of the evening by Allie Zech, on the influence of the special flower sales of the department stores on the florists' business. Mr. Zech's paper, which appears on another page of this issue presents a serious problem in the flower business of Chicago. Each year the large department stores cut more heavily into the trade on all the florists' special days and offer flowers and plants at a price much lower than those quoted in the regular channels. The reading was followed by a lively discussion. Some contended that it helped to foster the love of flowers in homes where flowers otherwise would not be used, and others that only the worthless stock found its way to the department stores, and it was suggested that one way out of the situation would be for retail florists to have more frequent special sales of their own. Allie Zech has grown up in the business and applies his mind as well as his hands to his work.

Arthur Herrington of New York was a guest of the club and gave an interesting talk on the flower show to be held in Pittsburgh, Pa., in June 1917. The proposition of a joint advertising campaign in the newspapers was again discussed and showed that five thousand dollars had been pledged by the wholesalers, but no action was taken, that would lead to anything definite.

PITTSBURGH FLORISTS' AND GARDENERS' CLUB.

The regular monthly meeting of the Club was held Tuesday, September 5th in the Fort Pitt Hotel. E. C. Reineman was appointed chairman of a committee to arrange for a banquet in the late fall or early winter in commemoration of the 25th anniversary of the founding of the Club. For the Flower Show next June under the auspices of the Garden Club of Allegheny County President Becherer was appointed to handle matters in relation thereto. The preliminary schedules for the show have already been mailed, and under the managership of Arthur Herrington the outlook is very promising for a large and successful flower show. An interesting exhibit of seasonable flowers was made by various members for which they received a vote of thanks. It was suggested that the subject for the next meeting be Trees, embracing their identification, proper planting and care, and members were asked to bring specimens of the foliage of those for which they wished identification.

H. P. JOSLIN, Secretary.

FLORISTS' CLUB OF WASHINGTON

The Florists' Club of Washington, D. C., expects to win fame during the coming season on the bowling alleys, for sanction was given at the monthly meeting for the use of the club name by a team to be entered in the Commercial Duckpin League. This

matter was brought up by Edward Nedomanski, who declares that a prize-winning aggregation can be gotten together. The big event of the evening was the annual crab feast given by Edward S. Schmid, and after the completion of the regular business of the evening those present went downstairs where long tables had been spread. A rising vote of thanks was tendered to Mr. Schmid and a number of speeches were made. Motion pictures were also exhibited, through the courtesy of Sidney B. Lust, of the United Film Service, and in addition there were pictures of the recent outings of Kallipolis Grotto, and in these Fred H. Kramer was one of the star performers. President Jenkins made a report on his mission as representative of the club in a conference with officials of the Washington Aquarium Society, which sought the co-operation of the florists in the running of a show here in November.

NEW YORK FLORISTS' CLUB.

The September meeting of the Club was well attended, considering the interruption to travel caused by the carmen's strike. Much of the time was spent in interesting accounts of the happenings of the summer, participated in by Secretary Young, H. A. Bunyard and the various chairmen of committees, the principal speaker being Joseph A. Manda who gave a very entertaining story of the Convention, the boat trip thereto by the New York members and the kind reception at New Orleans. A vote of thanks was extended to the florists of Houston and New Orleans. The expected lecture by A. Herrington was postponed until the October meeting on account of the death of Mr. Herrington's mother.

The "International" exhibition for next spring and the S. A. F. Convention for next summer were discussed and a glowing prospect for the greatest florist gathering ever had was voiced by Secretary Young. He stated that there is already a large call for exhibition space assignments. Vice-President-elect A. L. Miller added his enthusiastic promise for whole-souled effort to make 1917 a record year in the annals of New York horticulture and was the recipient of a vote of thanks for his gift of cigars. John Canning of Ardley was awarded honorable mention for an exhibit of *Salvia farinacea* and its white variety.

President Weston appointed Patrick O'Mara, Frank H. Traendly and Walter F. Sheridan a committee to prepare resolutions on death of W. F. Kasting and Chas. H. Totty, Peter Duff and Charles Knight a committee to prepare resolutions on death of Wm. Tricker.

NEW YORK DAHLIA SHOW.

Preparations are well in hand for the forthcoming Dahlia show, to be held by the American Dahlia Society in conjunction with the American Institute of the City of New York, at the Engineering Building, 25-33 W. 39th st., between Fifth and Sixth aves., New York. The show will be opened on Tuesday, the 26th, continuing over Wednesday and Thursday, and as the schedule of the American Institute is a lengthy one, and is amplified by the special prizes of the American Dahlia Society, keen competition from a wide section of the country around New York is expected. Silverware and medals are offered by the A. D. S., while money exclusively is offered by the American Institute, the total prizes running to over \$460.

Every section of the Dahlia is catered to and there are three divisions in the schedule for commercial growers, professional gardeners and amateurs, each being protected in their own division. Admission to the show will be free and it is hoped that with the present favorable weather, cooler nights and showers, such a Dahlia show as New York has not seen before will be staged.

Entries should be directed to William A. Eagleson, secretary of the

American Institute, whose office is at 322 W. 23d st., New York, but all information relating to the Dahlia Society, its work, membership and publications should be addressed to J. Harrison Dick, 1426 73d st., Brooklyn, N. Y.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

At the next meeting of the Gardeners' and Florists' Club of Boston to be held at Horticultural Hall, Boston, on Tuesday evening, September 19, at 8 o'clock, Prof. E. H. Forbush, State Ornithologist of Massachusetts will deliver a stereopticon lecture on "How the birds help us and how we help the birds." Mr. Forbush is an able and most interesting speaker and his subject being of supreme importance to every gardener and florist should attract a large audience. When the business session is completed a collation will be served, followed by dancing. Ladies are cordially invited to be present on this occasion.

W. N. CRAIG, Secretary.

CLUB AND SOCIETY NOTES

The monthly meeting of the Rhode Island Horticultural Society will be held in the Public Library, Providence, R. I., on Wednesday, Sept. 20. Prof. Paul Corriveau, Rhode Island State College, will lecture on fall work in the orchard. Business meeting, 7.45 p. m. Lecture at 8 p. m.

ERNEST K. THOMAS, Sec.
